also always perplexed me how you could berate (maybe not the right
choice of
words) a radio that you have never owned.

But, as they say...
Everyone's entitled to their opinion and I have always respected yours,
even
when you're wrong ;)
Now break out the peace pipe!

How is a CC Radio (or any radio) similtaneously tuned to 5 FM, 5AM, 2 weather and 13 TV stations. To do so would require an equal number of receiver circuits and speakers. And an unusual human mind able to process an equal number of audio inputs all at the same time.

If on the other hand you are talking about push-button or dial accessed memories, those are not used simultaneously. The radio in the CC Crane radio,any car radio, most modern shortwave radios and even the push-button radio in my old 1957 Ford all access stored stations sequentially.

OK folks. All I hear is whining about how things are changing. So
I'll ask the question again.

If you really believe that morse code is an important way to
communicate that should be preserved then you need to convince other
hams and potential hams to learn the code. You need to convince enough

hams to use code so its very usage generates excitement and makes
people want to join in the fun. Almost self-perpetuating like it was
in the 1950's.

Preaching (or complaining) to the choir on the radio fora about the
abysmal state of things will not add one person to the ranks of key
pounding hams.

So what are you going to do to increase the number of code practicing
hams.

When I was born in Carthage,Mississippi,November 5th,1941,that great big old house on Main Street had indoor plumbing and them old style twisted electric cords hanging down from the ceiling in every room with the light bulbs in them.

One time when I was about four years old (in Carthage) I stuck a cats head in a glass quart jar.(I was dumb) I still remember that guy from the Ford dealership catty corner across the street,coming over in our front yard and breaking that glass quart jar so that cat could get out of there.I wouldn't harm a cat nowdays for anything in the World.

I have a little scar on my face from that time in Carthage when I crawled up under our front porch and pulled that old Hound Dogs tail.Of course he reached around and bit me on my little young A.. face! If you was a Hound Dog,,, what would you do?

The Grundig S350, CCradio, and SuperAdio radios are all over-hyped - my $25 RS model 12-898 digital PLL radio performs, just as well as, my S350, before I returned the S350 to RS ! Even the CCradio series has quality control problems (tuner and the famous $50 fix for LCD failure), along with the SuperAdio and the S350 as cheap plastic drifty boxes. Check out the following and show, "lowest ratings first":

http://www.amazon.com/gp/product/B00007079A/103-5459381-9395007?v=glance&n=172282

http://www.amazon.com/gp/product/customer-reviews/B00000J061/ref=cm_rev_sort/103-5459381-9395007?customer-reviews.sort_by=%2BOverallRating&s=electronics&x=11&y=14

These radios are Chinese-made junk, and Grundig, especially, should be ashamed of themseleves for marketing their junk, when some people think they are still made in Germany !

Here's one better.......

LIVE TONIGHT: 06/07/06
Will Thomas -Mind Control-
w/George Noory

http://www.coasttocoastam.com/shows/2006/05/07.html

Filling in for Art Bell, George Noory welcomes
researcher Will Thomas, who'll discuss how
the US military has been targeting the Iraqi
people and their leadership with secret
electronic mind control technology.

http://www.willthomas.net/

http://www.amazon.com/exec/obidos/ASIN/0968919928/ctoc

http://www.willthomas.net/Articles/CC04describe.htm

This all-new hardcover Fifith Edition of All Fall Down by
William Thomas draws upon thousands of pages of
press reports, background books, Congressional
hearings and the author's experience in the Middle East,
AFD chronicles behind-the- scenes events on this day
of audacious atrocities - and the real motives
behind Pres. Bush's Afghanistan adventure.
Once again, the real "GOD" being fought over
is Gold, Oil and Drugs. Did U.S. intelligence
agencies know of the attacks in advance?
Were there bombs in those buildings? What are
moderate Muslims saying about bin Laden and 9/11?
What do suicide-bombers say? Were American
air defenses deliberately "stood down" on Sept. 11?
These questions and many more are answered
n this fully-documented, large- format 235 page
book - complete with an additional 19 pages of
references for readers wishing to check the
author's facts and draw their own conclusions....

(A MUST HAVE BOOK for every Militialoon
and Conspiracy domestic shortwave-radio listening loon)

The point is that the S350, CCradio, and SR series have a long history of quality control problems - I wouldn't go near any of these radios ! It's funny, how over-hyped they are, then reading the reviews on Amazon and RadioIntel, to see how so many people believed all the manufacturers' hype about these cheap plastic over-sized boxes. I laugh, when I hear about the SRs switches falling off, the S350s flimsy tuning knob and wide / narrow and band selector switches, and radios outright failing ! Oh yes, we can't forget the famous Porsche designed Grundig G2000A:

David,

Yes there are 100s of Thousands of Truckers on the Open Road
but most are not Looking for AM/MW DX like many of the
GE Superadio Owners are . . .

Just like how many Open Road Trucker have a Shortwave Radio
in their trucks and Listen to it while they are Driving -Not Many !

Most likely many Truckers have an XM or Sirius Satellite Radio
and get what ever programming when ever everywhere anytime.

i will see you on down the road david - stay tuned ~ RHF

Don't forget the coal scoop full of kindling to light the wood stove
for breakfast! I visited my grandparents farm in Kentucky a number of
times when I was in my teens. They had to draw water from the well by a
rope an bucket becasue the "new" well was over 100 feet from the
farmhouse. When the water table was high enough they could use the
handpump on th old well, but during long hot summers it was too low.
They raised corn, sugar cane and tobacco for cash crops. They also had a
couple acre garden for their own food, along with some hogs, cows and
dozens of chickens for Sunday dinner.

Don't you find it odd that people need to be "convinced" to use morse?
Nobody needs to be "convinced" to use PSK31, RTTY, SSB, FM or even AM.

Life is too short to waste it "convincing" people to use a mode they
are instinctively not interested in.

The underlying problem is you want things to be like they were back in
the '50s. Well, I was licensed in 1957 and I had fun back then too,
but time marches on. Try marching along with it.

I have the same problem with the code. My brain wants to identify or
count the dit/dahs and then translate them into the character. Learning
each character as a quick burst of sound, as if it were sent at an
equivalent speed of perhaps 20-wpm, is probably the best method.
I never got beyond about 10-wpm after practicing on and off for many
years, sometimes for months at a time. I used to listen to the code
practice transmissions on W1AW every night. If the 'General' code
requirement had been 3-wpm less, I might have been a ham' decades ago
but I wanted HF phone privileges or nothing (stubborn me). I didn't have
any interest in getting a Technician license or being a Novice until it
expired because of my code limitations. I don't think learning the code
has much to do with intelligence or even motivation to a certain extent.
Some folks are just not wired for code. I could have passed the Extra
exam' in the days before the questions were available to be memorized
but that 20-wpm was the problem. I tell myself it was amateur radio's
loss. :-)

3923. Russia's radio-broadcasting companies celebrate Day of Radio

Newsgroup: rec.radio.shortwave
Date: 2006-05-07 19:31:10 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <4c707uF13npk9U1@individual.net>
Source record: 73130

7 May 2006
Moscow
Itar-Tass

Russia's radio-broadcasting companies and their personnel are marking the Day of Radio.

In 1895, Russian scientist Alexander Popov represented at a meeting of the Russian Physico-Chemical Society the first-ever radio receiver in the world he had designed.

Only 50 years ago, May 7 was proclaimed the Day of Radio.

At present, radio remains one of the most popular mass media sources successfully competing with TV and press. According to statistics, 85 percent of adults listened to the radio last year.

"Although we get most of the information visually, radio helps us in thousands of situations when we are unable to switch on a TV-set and look through a newspaper," a member of the Radio Guild - the national organization of mass media workers Mediasoyuz, Igor Malov, told Itar-Tass.

"Radio is one of the most democratic mass media and the promptest source of information," he said.

He believes that "real revolution that may be only compared with the invention of radio will embrace domestic radio broadcasters in the near future."

"In the shortest time possible, radio will transfer to digital broadcasting," Malov said.

During the day Russia's radio-broadcasting companies will surprise their listeners and make presents to them. For instance, the Voice of Russia will hold a radio-marathon devoted to the Russian language as a tool of inter-ethnic communication.

Different Russian-speaking radio stations from the CIS and non-CIS countries will be on air of the Voice of Russia for eight hours. Scientists, politicians, writers, public and cultural figures will discuss on air what role the Russian language plays in the modern world and whether it has chances to become the language of international communication.

>
>Charly
The mixer in the radio produces both the SUM and the Difference output
between the local oscillator and the desired signal. On a typical low
end receiver with a 455 Khz If strip, that means that the two
different input frequencies can produce 455 Khz difference output.
The sum is usually far enough away from 455Khz that is will be down at
least 70db.

So if you tune the radio to say 4000Khz. The Local oscillator will be
4455KHZ. The mixer produces two outputs, the sum 8455 Khz, and the
difference 455Khz. However any signal coming into the mixer will also
produce the sum and differences. So an signal at 4910Khz will produce
two outputs as well. A sum, 9365Khz, and a difference of 455Khz.
As a result two signals that are the right frequency can enter the IF
strip. One of the two is an image, which one depends upon the receive
design, generally the 4910Khz would be the image. Most single
conversion receivers don't have a lot of selectivity in the front end,
so if there is a strong signal 910Khz away from the tuned
frequency,you are likely to hear it.

There are two ways around this problem. The most common is probably
multiple conversion, so the first IF is at a much higher frequency,

i.e. instead of 910Khz apart, it is many Mhz apart, which means even a fairly crude front end will keep the undesired. On some of the Sony portables, the first IF is actually at about 40mhz, so image is a long way off in the spectrum. Dual and triple conversion receivers also usually have tuned RF stages anyway, so the image rejection is often on the order of 80db.

The other approach is a tuned RF amplifier stage or pre-selector, which keeps the image well outside the bandwidth of the RF amp. Both effectively prevent the image frequency from reaching the mixer stage at audible levels. This can probably put the image rejection at something around 25db, which isn't great, but usuallly workable.

It certainly does. One of the ways to calculate Q is
Resistance/Reactance. By definition, increasing resistance will lower
Q.

Q is also the bandwidth/frequency at the point the signal is down to
half peak.

It is possible .... I'll look for some time ...
I have the right tools ..

I was already thinking: if DRM is 12khz wide (am I right ?), then it
might be a tuned loop is too narrow ??

So an R might help ???

Why? Some receivers use multiple L.O.s in the same band to receive
multiple channels at the same time, and its a simple task to mix
multiple audio sources, or CDs would sound even worse than they already
do. You don't need 24 speakers to listen to a 24 channel recording.

Try working as a broadcast engineer at a small TV station where you run multiple cameras, the audio board, load film or tape and monitor the TV and AM transmitter by yourself. I did this for a year, while in the US army. I read Sci-Fi books and watched another TV station for entertainment while doing all of the above while working from sign on to sign off for at least seven days out of each two week period.

Right now I have three computers running, while listening to WSM over the internet and I have a TV on in the corner.

I used to produce radio and TV commercials, and I was in awe of the
so-called "engineers" who could run a monster board, several tape
machines and assorted sweetening equipment, all without missing a
beat.

We were somewhere around Barstow, on the edge of the desert, when the drugs began to take hold. I remember dxAce <dxAce@milestones.com> saying something like:

>> Odd. I definitely get it on LSB. Some days there's a pretty weak USB
>> component but LSB is the consistently stronger of the two.
>
>You've some sort of receiver problem.

Maybe, but it's not showing up anywhere else; SSB on all the ham bands is fine. Tonight, for example, the USB component is there on 7590 and quite listenable, but LSB is definitely better.

Who knows what happens to the signal on its bouncy journey across 1000 miles of open ocean.

Well, it sure doesn't shift from USB to LSB on its trip! You have a receiver problem.

What exactly are you using?

dxAce

Right now I'm getting it on 7590 USB, on a different receiver than last
time, and there is no sign of anything on LSB.

The other Dave at 45N 75W

3946. AM/MW Loop Antenna - Inductive Coupling -vice- Resistor Spoiler

Newsgroup: rec.radio.shortwave
Date: 2006-05-07 21:57:19 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1147039039.586791.79380@v46g2000cwv.googlegroups.com>

Switcher,

AM/MW Loop Antenna - Inductive Coupling -vice- Resistor Spoiler
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9407

To some degree all Circuits are L+C+R
- - - Although anyone of the three may not be significant
enough to factor into the Circuit Design parameters.
- - - Hence an AM/MW Loop Antenna is simply presented
as an L+C Circuit.

"IF" you were to use a Resistor in the Circuit of an
AM/MW Loop Antenna it would be 'because' the Radio
that you were using it with was being OverLoaded by
the Signal from the Loop Antenna.

You could simply achieve the same thing by varying the
AM/MW Loop Antenna 'coupling' with the Radio -by- Moving
the Loop Antenna nearer-to -or- farther-away from the Radio.

AM/MW LOOP ANTENNA COUPLING :
* The Coil of the external AM/MW Loop Antenna
is an Inductor {RF Transformer Coil}
* The Coil of the Radio's internal AM/MW Antenna
is an Inductor {RF Transformer Coil}
* Together the Two Coils form an RF Transformer
Moving the Two Coils and changing their relationship
to each other varies the "Coupling" between them.

http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/5886

RESISTOR AS A SPOILER IN AN AM/MW LOOP ANTENNA CIRCUIT :
-However- If you must use a Resistor in the Circuit of the
AM/MW Loop Antenna - Consider using a Series 1000 Ohm (1K)
Potentiometer (Pot) - So that you could adjust and fine-tune
the Circuit to achieve the Maximum Signal without OverLoading
the Radio. Hook the "Pot" up with the two ends connected
together and the Center Wiper as teh other end of the
Resistance Element of the Circuit. With the Wipper at either
end the Pot is out of the Circuit. As the Wiper is moved
from one of the ends to the Center of the Pot the amount
of Resistance in the Circuit 'increases' and the RF Signal
{EMF Field} of the Loop Antenna is Decreased. Wiring-Up
the Pot this way makes the Resistance Curve non-liner from
"0" to 500 Ohms sort of more like an Audio Taper Pot.

If you search the archives of this group (for example with Google), you wil find some good info about loops for low frequency reception. One way to keep the loop's effective self capacitance down is to wind it with the wires spaces apart some. It is common to use at least one wire diameter spacing between wires, so it would be at least two times the wire diameter, center to center. You can also put, say, 11 pieces of wooden dowel or PVC pipe in a circle. Number them in sequence. Then wind the wire outside 1, inside 2, outside 3, ... outside 11, inside 1, outside 2, ... so that each successive turn is on the opposite side of each particular pipe. (The axis of each pipe is perpendicular to the plane of the circle.) As you can see, you must use an odd number of posts in this construction.

There is benefit to making the loop very symmetrical about a vertical plane, because local sources of noise are likely to be electric field which is perpendicular to the earth, and will be rejected by such a symmetrical antenna.

Cheers,
Tom

They don't. They use a counting code where the alphabet is represented
as a 5x5 or 6x6 (for cyrillic) matrix and then they use a count for
row and column. It was described in Koestler's "Darkness at Noon", a novel
about the Stalinist Purges, but I've read that a 5x5 version is used in the
west. Unless you're a US Airman in a North Vietnamese POW prison, they
used Morse using a tap/scrape for dot/dash.

I'm just 51, and I have lived (in my teens, no less) in a place with only an outhouse (a small house in Richfield, Utah) that also had no electrical outlets (we had a hanging bulb in each room, and had to use screw-in adapters to plug anything in). I also lived in a large farmhouse in Orem, Utah where we did have indoor plumbing, but our heat was a coal fireplace and we had a coal burning stove in the kitchen (we had an electric stove, too... but the coal was used more than once during the frequent electric outages). The fireplace was a 'wrap-around' type that heated the entire house (sort of) but mainly the livingroom and main bedroom. The house was 2 story and had no heat at all upstairs, where our (the kids) bedrooms were. Also, in 1963, we lived in a 'town' in Montana (Elk Park) with only a house, combination restaurant/bar/post office and a burned out garage. The restaurant was long closed, the house had only potbelly stoves for heat and wood stove for cooking. I can't remember anymore what we had for water, as I was all of 8 year old at the time. Fun times for a kid, though. How many people would or could live that way now?

I think most of them, possibly with the exception of the Sony 7600GR, are very cheaply made, especially the Grundig S350 and the SR series. The CCradio is a $150 over-hyped AM/FM "DX machine" - just look at the reviews on Amazon and eham.net. The ONE radio I would recommend is the discontinued RS DX-440 (RS always seems to discontinue really good radios)...

I suspect that they don't make much money on shortwave radio sales.
Fry's replaced their tiny SW/weather radio section with CBs (disco,
anyone?). Retail SW radio sales have serious competitors in the internet
and mail order catalogs. Why should Rat Shack stock shitty Grundig SW
radios when you can go on ebay and buy the exact same radio labeled as a
Tecsun for half the price? You simply can't compete with that. Plus the
few retail outlets that exist, such as Ham Radio Outlet and Universal
Radio, do lots of mail order business. With the ease and cheap cost of
shipping radios nowadays, even from China, why should a local store
bother to stock shortwave radios? People who are considering a Grundig
radio will google it, see that it's the same as Tecsun, go to ebay and
search for Tecsun, see that they can get the same radio for half the
cost from Hong Kong, and order it from HK instead of from Rat Shack.

I guess wimmin are like SW radios, but there isn't anything of interest on SW anymore (the BBC and "Voice of the Andes") are now gone. So, why all the bragging about SW radios (not you), like the guy who just put out $150 for an Eton E5 (I hope it isn't made on China by Tecsun/Eton/Grundig)...

In the olden days, the purpose was well understood. It was, and still is, to become proficient in one or more aspects of radio communication, to provide a skilled base of technically proficient people who pursue an interest in some aspect of radio communication technology and art for personal gain without any financial interest, reward or compensation from the activity.

It is NOT to open a box, plug it in, connect a wire, and, when it doesn't work, get on the internet and ask for help.

I advocate for a code test for the following reason. I value what I have to plan for, work for, sacrifice for, and invest my time for.

I value the reward for 18 months of practicing Morse Code every night for one hour a night. That's an investment.

I value the reward of studying, really studying, to understand the electronics for my Technician License. That's an investment.

I value the reward of studying, really studying, to understand the electronics for my General License. That's an investment.

I value the reward of studying, really studying, to understand the electronics for my Advanced License. That's an investment.

I value the reward of studying, really studying, to understand the electronics for my Extra License. That's an investment.

It took me 45 years to progress from Novice to Extra. [Note: I was 25 wpm CW proficient in the 1960s. Marriage, Family, Profession took priority over Ham Radio.]

I teach Ham Radio classes. I'm a registered ARRL instructor. I'm not invited to teach too often in these days. I DO NOT teach Q&A. I WILL NOT teach Q&A. I teach understanding of what's behind the Q&A.

My Technician classes begin with ELEMENT 1. It takes 3 to 4 weeks at two hours a week for classes to pass Element 1. It takes 10 to 12 additional

weeks of a two hour class one night a week plus homework to pass the Technician exam.

Those who choose this path have made an investment of their time and effort. I hope they value that investment.

I WILL NOT support a 4 hour session on a Saturday morning and hooray! You are now a ham!!!

BTW, FWIW, I'm still learning from the skills and experiences of Roy, Cecil, Rick, et al on the antenna n.g.

/S/ Dave, W1MCE

Here is the latest email I personally received from Frank, above:

Hey,

Why do you responded to me with a separate e-mail address? Cuz
you are
too much of a coward? I've got plenty of good "non-crap" radios like my

Kenwood R-5000 and Drake R-8A. How about that? Yes, the Superadio 2 is
cheapest radio that I have. Why don't you get some real radios like
those? You and cuhulin need to learn to open your mouth when you have
something intelligent to say. Maybe you don't know how....

Frank

Is he admitting that his SuperAdio II is crap ?

I can tell from your posts that you have absolutely no first hand experience with the SR1 or SRII. The SRIII is a different breed of cat, and has indeed suffered from abysmal quality control. I have yet to see one that is properly calibrated, and the are definately cheaply built. The SR1 and SRII, on the other hand, are virtually indestructible, and are not made with cheap plastic nor with cheap third rate components. The only two times I have ever seen a switch fail on an SRII are when the owner thereof decided to use their fist to turn on the radio.. and have never seen a switch failure on an SR1, which had a heavy metal built switch.

I agree with the Drakeman: The Key West station is on 7811 USB, not
7812.5 as posted.

Greg .

3985. Zenith Transoceanic 7000 - Back cover pops out from battery weight - Any good fix??

Newsgroup: rec.radio.shortwave
Date: 2006-05-08 00:53:16 UTC

I have a real "minty" Zenith 7000 Shortwave radio. The back cover is held on by a push pin in the middle of the cover. You push in the pin and it expands the surrounding prongs and it holds the cover in place.

Well, plastics back then got pretty brittle and I only have 1 of the four little prongs left on back of the cover. It's not enough the hold it closed and the upper batterys tend to want to push the back cover open.

I'm sure there are plenty of workarounds but I'm looking for a method that doesn't require hacking, drilling, or kludging.

I'm sure I'm not the first with this issue. Does anyone have any creative solutions that can leaves this radio in close to mint condition???

Any source of these push pins by chance??

TIA

Brenda, you would be both amazed and appalled by the living
conditions of the thousands of homeless people living in the Ocala
National Forest. Some are people down on their luck, but a lot of them
are mentally ill veterans who were ignored when they first asked for
help in the '60s and '70s. Now they area afraid of anyone who they don't
know. the last time they had a head count it was over 2000 men and
women who were Veterans in need of help. We had arranged a medical
stand down this spring, but the whole thing fell apart when the medical

team's large truck blew the engine, so we are trying to reschedule it. The problem is that once again these people were promised help that they didn't get and we've lost what trust they had for us. :(

As far as farm life goes, the last time I was there I was 13, and there for my Grandmother's funeral. It was right after school let out for the summer in 1966. The funeral was held in an old wooden church that was supposed to be over 100 years old. It had electricity, but no indoor plumbing as far as I can remember.

the older parts of my grandparents home were surface wired with those brown bakelight switches, sockets and outlets. The newer kitchen was built after the road was electrified, and had the wiring in the wall. I remember being there for a weekend when a storm blew in and hit the HV power lines a couple miles away. they were the last farm with electricity on the dirt road, and there was no lightning protection on the old REA wiring. The lightning traveled to the end of the line and arced to the 120 secondary, went into the house and blew an outlet out of the wall as it turned into ball lightning. Quite a sight for a young kid who wanted to know how everything worked! :)

Try producing and directing a live TV newscast while running two cameras by hand in the studio at the same time. I got to where I could switch the 16 mm projectors and not realize it because I was doing four or five other things at the same time. Then I would have to jump and run across the room to load and cue the next reel in time to switch again. Even more fun was when one of the projectors refused to start and you had to jump up, run across the room, push in the manual clutch and give it a spin, switch the projector to local control, run around the film change and switch the other projector to manual to stop it, then return both to remote control. All of this took about four seconds, and I still got complaints about sloppy switching when it happened. I could splice and restart a broken 16 mm film in five seconds, flat.

That depends: What size is the hole, and how deep is it? This
determines which one you need. They are still used on some modern
equipment to hold Plexiglas over HV compartments.

Hardly. The reason folks like the GE radio is that it has a tuned RF
stage to get good reception fed to a decent speaker so you get decent
sound. The 6 D cell batteries last days not hours a a sound level
that is usefull in a decent sized room. That's assuming you can't use
the power cord. The 5 tube superhet's were no better if as good for
reception but forget battery life. Most did not do FM.

If the tuned loop bandwidth is to narrow then you can deliberately
spoil the Q of the loop by adding resistance and broaden the bandwidth.

I have not calculated it but I expect a LC loop operating in the MHz
range would have a bandwidth greater than 12 KHz so I do not expect you
will have a problem.

A really quick back-of-the envelope look at the problem indicates that adding a resistance won't make the signal any stronger when the loop is tuned away from the peak. It'll just make the signal weaker when it is tuned to the peak. So it's "wider", but no better at any tuning setting but worse at and near the peak. To check on my calculation, try it: connect and disconnect the resistor at various tuning settings, on and off peak. Does it make the signal any stronger at any setting?

The only time there would be any advantage to adding an R to widen the bandwidth is if it's so narrow that it distorts a modulated signal due to uneven response across the audio bandwidth. This would mean at least several dB variation over a couple of kHz for voice SSB or over 10 kHz for broadcast quality AM.

I read his post correctly his concern is a 12 KHz wide DRM signal and
that the tuned loop response will be to sharp and narrow. Firstly he
needs to build the loop and sweep it to see if has a problem to begin
with. Parasitics may cause the loop response to be wide enough that 12
KHz will not be a problem. If it turns out it does he can add
resistance, which will decrease the peak response and broaden it. Adding

resistance will cause the loop to not work as well but that is the price you pay for greater bandwidth.

Normally the best thing is to over-couple the loop to the receiver,
rather than loading it with a resistor.

The Q of the loop is not only a function of the loss resistance and L/C
values, it is also a function of the loop loading caused by the
feedline/receiver combination. That introduces resistance to the
system.

Adding a resistor is the last think I'd do. If I had a bandwidth
problem in a resonant loop, I'd simply overcouple to the feedline and
let the feedline/receiver resistance load the antenna.

The only problem with the EEs that I run across, is they know just enough to
get themselves hurt and/or burn their homes down when they try to work with
ELECTRICITY instead of electronics. It seems that at 240vac, all their
common sense goes out the window.

www.mindspring.com/~brucec/techhelp.htm

I have a G.E.Long Distance Radio.That is what it says on the dial,anyway.It is sitting over there on the floor with some of my other old radios,behind my old antique organ that has real Ivory keys on it,I use it for a tv stand.The radio was made in the 1980's,I think.It has a big speaker and tone controlls.I have too much junk stacked over there right now to get to it to see what model it is.

It has an ON/OFF push button on top,but that push button quit working years ago.(G.E.so-called ''quality control'') Maybe somebody will post a website that has pictures of those G.E.Radios from the 1980's? It is a large (sort of large) portable radio.I own many,many old G.E.transistor and tube type radios,many other brand names of old transistor and tube type radios.

>
>

That is exactly the point I was trying to make. If one is content to turn
off the radio and not communicate at times when signals are distorted, then
various modes become less important. But I prefer to be able to communicate
as long as possible. Thus I consider it part of my goals as a ham to be as
conversant with as many modes as I can. I have setup and operated the

digital modes, including building my own sound card interface (even though I don't normally attempt soldering), just to gain experience in them even though I have no real interest in operating them per se. Pounding away at a keyboard is too much like the internet or my job.

To clarify, specify the conditions, and the "best mode" becomes evident. With distorted signals, CW wins with voice coming in second. With weak signals, some digital modes win with CW coming in second. For power consumption for a given signal strength, the digital modes come in last since you must have power to run the computer. And the power to run a computer alone (depending on the computer) is often more than enough to run a 100w CW or voice signal. So you add the digital signal and the digital modes become "power hogs."

Every mode has value.

I've already had a Superadio III for many years that I use by the bedside. I happened to see the Superadio II at a shop here in town that takes donated items, sells them and the uses the proceeds to purchase religious literature to send to other countries.

I picked up the Superadio II for $4.00, cleaned a bit of dust off of it and it's jut like brand new. It's a very fine radio for MW use. The next day they had the Radio Shack MW loop out there and I picked that up as well.

Now I'm hoping that a Superadio I in very nice condition shows up, or even another Superadio II.

Whilst mainly interested in SW broadcast DX I do dabble in MW from time to time.

NIce.

Three grey boxes stacked like this one

http://users.fulladsl.be/spb13810/amloop/loopbottom2.jpg

would allow to make a spiral with 8 turns ... etc ...
should be the best solution ...

I bought 2 of these at a sell out for 4 euro/$/piece, now they are at 17
;-(.. !

> * Together the Two Coils form an RF Transformer
> Moving the Two Coils and changing their relationship
> to each other varies the "Coupling" between them.

Nice reasoning, but:

When coil A - ant has 5 turns, and coil B - radio has 5 turns, the
voltage (or so) is the same.

When we now double A / or B, the voltage should vary for the same
amount, I learned.... so you can make the sig higher ???

In my physics book (Halliday/Resnick Fundamentals of Physics), p 445 -
transformers it says:
N1 / V1 = N2 / V2

would it be possible to double the number of turns on B (which is
sometimes easier ... space requirements) ??? That would lead to double
V2 and higher sig ... ???

Of course, problem remains ... resonance. You can't add tunrs to A, or
you loose resonance ... Adding turns to A means .. making it smaller
... to have the same resonance properties ...

An antenna connected directly to a hot tube mixer can be more
sensitive than a TRF front end. Sure you get images but you also can
get DAYTIME DX.

Dave, W1MCE, BSEE [ElectriCAL Engineer]

Never worked as an electriCAL Engineer. Designed transistors for almost four years. Designed USAF Flight Line Test Equipment for six plus years. Designed USAF Computer Controlled Avionics Test Equipment for 10+ years. Spent 3 1/2 years as Field Engineer at Hill AFB, UTAH on Computer Equipment. Worked for 7 plus years on the Effects of Nuclear Weapons on USAF strategic assets. Spent part of three years at the Nuclear UGT facility in Nevada. Spent 6 plus years as Chief Engineer on the USAF MX Missile RS/RV. Finished up as System Engineer on the RF Subsystem Force Modernization for the MK21 RV. In between, I managed the Strategic Product Design, Electronic Department for three years, now retired.

I still have my text books on HV transformer design, Generator Design, Fluid Dynamics, Thermo Dynamics, three phase power distribution, etc. around here somewhere ... I hope.

My VP Engineering, to paraphrase his judgment, claimed: "Give me an Engineer with a good Physics background and a good Math background and I can put him/her to work anywhere. In three months [s]he will be blunder proof, in six months competent, in 12 months expert." After 30 plus years of engineering I conclude he was correct.

But, I've left BSEE behind me. I retired from my profession six years ago.

And, as my wife says; "You can take the engineer out of engineering; but, you can't take engineering out of the engineer." I'm still learning from highly gifted people like Roy, Cecil, Reg, etc.

I'm still practicing my Vocation ....

CW, you are incorrect. I VALUE my license because it took effort over many years. The issue is valuing your license because you invested time, talent and energy into obtaining it. The more you invest, the more you value.

If you read the full message you would conclude that the message is about investing and reward of investing. It is not about a 4 hour cram short term memory program that yields a Technician License without the KNOWLEDGE of how to build a 1/2 wavelength dipole with coax to connect to the new out of the box toy.

When I read posts regarding 'how to ...' on some basic aspect of Ham Radio I wonder about the training, education, understanding, that went into 'studying' for that license. IMO, the license should indicate a level of proficiency that, in many cases, is missing. When I hear an EXTRA CLASS ham on twenty meters asking someone what the difference is between USB and LSB, we have a problem in training and education.

I don't know if Ham Radio will degenerate into glorified CBers. But, for many it has become a hobby of appliance operators.

If you really believe that morse code is an important way to
communicate that should be preserved then you need to convince other
hams and potential hams to learn the code. You need to convince enough

hams to use code so its very usage generates excitement and makes
people want to join in the fun. Almost self-perpetuating like it was
in the 1950's.

Preaching (or complaining) to the choir on the radio fora about the
abysmal state of things will not add one person to the ranks of key
pounding hams.

So what are you going to do to increase the number of code practicing
hams.

Well, "Superadio" is a brand for (what is now) Thomson Consumer
Electronics' long-distance portable radio.

Never did much DX-ing with mine, since I modified it and used it as an
FM-SCA receiver.

Gave it away at a swap meet last year.

I did not study for my tech test at all (beyond a quick reading of the
pool I worked from memeries of my failued efforts 2rogh twenty years
before to obtain a Novice lense

and what reward from Code, I have invested in my teen when I could that
sort of thing 5 years at 40 minute perdays 5 week aweek and I got
NOTHING for it. (except that one of the ham giving the test noticed
from the patern in my error I might be dyslexic and I got what
treatementthier was much sooner than i would goten otherwise)

you idea is premised on the theory one get what one pay for and gets
paid what oneis worth. You kknow what ome of us have never found that
to be true I have never gotten a fair rate of pay I have always been
more than I was worth or less than I was worth

I value profit, my tech licesne has been a profitable insvestment,
exceming so, Hf has been a balck hole for effort yeilding NOTHING for
that effort

indeed I am not esp interested in building rig myself more intersted in
interfacing radio with their part attennas and such

indeed I have even been intered in the possibilities of what I call
human assist machine decode of CW I have made contacts where the
machince decodes what it can and I look at a screen to decide is that a
dit, dah or satic, feeding the results back in the machine for clear
text, done that hispeed metro stuff and that has acheived my 3 EME
contacts

all without any real abilty to decode by ear the cw itself beyond
needing to tune the signal

CW is and might be around forever for identifiers in different things.
It can be transmitted along with voice and doesn't get in the way
of other things. Any loss would be the best fun I had during
my Amateur Radio Service and learning Radiotelegraph Second class
training. I even found a code chart at the RF desks at a NASA MSFN tracking
station when I worked there. Just in case!

Oh ... my new name for Chuck Harder: CHUCK MAMZER.

"Mamzer," BTW, is the Hebrew/Yiddish word for "bastard."

Henceforth, when you see the moniker "Chuck Mamzer" in my posts, I'm
referring to Chuck Harder.

Fascinating! We have here a perfect example of a functional illiterate
who was able to obtain a Ham license. Of course he would not like CW as
one must be able to spell, and construct simple sentences, which is
obviously beyond him.

I still have mine. I bring it out from time to time so that
the kids can listen to it; it works well on a 40'-50' wire.

One thing I did notice is that no one mentioned owning
the unlamented DX-360, which was sold around the
same time as the 440.

Heh. I knew a guy who worked on CGI graphics in my
previous company who used to have a similar setup

in his cubicle (just swap the television for another workstation). He used to quip, "It's not just a job, it's a CAT scan."

These days I repair computers, design web sites and read the
newsgroups at the same time. No cats allowed around here, though. :)

I do have this around the house from time to time:

Since you all seem to know radios and know the ones radio shack offers,
maybe you could make a recommendation for me.:

I would like to know a good CHEAP handi - talki that I could get from
Radio Shack. But I need one with pretty good sound quality -- not too
concerned about how far it will pick up -- just want to start out small
with my first radio.
Oh, and I can't put up atenas and grounds all around my house either so
keep that in mind. '

Thanks.

I had a 360 and soon after bought a 440. The 360 was not much of a performer
really but good enough to listen to powerhouses. The 440 on the other hand
was a great radio and I think one of the better portables ever made.

Oh great, now we have a new negative term for near and far EM waves
"Electronic smog." It has to be bad for you. Stay away from the toaster.

<http://news.independent.co.uk/environment/article362557.ece>

We have a case history to refer to at the end.

"The symptoms got worse whenever she was exposed to electricity. She
could not use a computer for more than five minutes without becoming
nauseous. Even using a telephone landline gave her a buzzing in the ear
and made her feel she was "going into meltdown".

Unfortunately for people reading this news group what happens when she
uses a radio is not described so use one at your own risk. I'll just bet
she hears voices though.

> reference for that? (might be useful)

Whoever you are,
I believe you will find this in the book about the early days of amateur
radio. It is called something like "200 Meters and Down", or is it "Below".
ARRL has it and many ham stores do. I have a copy and have difficulty
remembering the exact title. A really nice read. I also have a 1932 ARRL
handbook and I think there are references to the "doom of the advent of CW"
in there also.

. You, of course, know about spark. The sparkies didn't like CW and, at
that time, the FCC __DID__ out law it (spark, that is).
I admit that it was a loaded question because CW stands for Continuous Wave
and what differentiates it from" Spark". Probably not what the troll wanted
and I know he/she/it wouldn't respond, but did it anyway.

> > Your fingers and eyes (or ears) aren't broke....

like that

Yea. A vent is in order every once-in-a-while, I guess. I figured the CW doom thing would get a comment, so thanks - whomever you may be..

The FCC Outlawed 'Spark' for very valid technical reasons
at that time and they are still valid today. The very same
logic could be used to still justify the continued use of CW
as an Amateur Operating Mode; even though the requirement
for proficiency in CW is not used for an Amateur License.

Charly,

Balun Hook-Up and Signal Images - What is the Connection ?
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9411
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9393

So by itself the Radio using the built-in Whip Antenna
receives the 5900 kHz signal from Bucurest Radio - OK.

Questions - The Basic Wire Antenna :
1 - How are you connecting the External Wire Antenna to the Radio ?
2 - Are you connecting the Wire to the Radio
via the External Antenna Jack ?
3 - Are you connecting to the Wire to the Radio
by 'attaching' the Wire to the Whip Antenna ?
4 - Are you using a Ground Connecting with the Wire Antenna ?

Questions - The Balun and Wire Antenna :
1 - How are you connecting the Balun Wires (2) to the Radio ?
2 - Are you connecting the Balun Wires (2) to the Radio
via the External Antenna Jack ?
3 - Are you connecting to the Balun Wires (2) to the Radio
by 'attaching' the one Wire to the Whip Antenna and the
other Wire to where ?
4 - Are you using a Ground Connecting with the Balun ?

Pleas tell us your thoughts/results of this particular comparison. I
just bought the E10 and am very impressed with its performance though I
miss the SSB a little. Not that style should decide a sale but I think
the little E10 is the most attractive set produced in years.

Thanks,
Scott

Maybe not quite yet like father like son.

A true liberal will let someone die if it will aid them in keeping their
ass from public disgrace. We seen it before with the Clintons too.

Talk about double standards. As to his addiction, wonder if they will
investigate to see if there was any doctor shopping going on so he could
keep getting the drugs.

My arguement for CW has never been from the perspective of getting more
ops. It's the quality of the operators I'm concerned about, not quantity.
A code requirement may mean someone will study the theory portion a
little more while they're building up their code.

One day, when you turn on your HF or VHF/UHF rig and it sounds like CB, you'll understand where I'm coming from.

I'm going to drop this agrument because it looks like I lost and people
really don't care anymore one way or the other, but I'll end it with just
couple questions to all;

What is one behavior on our ham bands that might or could make you loose
interest in ham radio and leave if you heard it or if it became previlent?

And does it seem like it's going that direction?

Hello

http://www.republika.pl/radioamator/sample.wav

Very popular in VHF band (alarms,monitoring)

I looking to decoder windows software via soundcard for this mode.

4090. Re: Negative comments about Plastic radios will get you plonked.

That sounds like a threat - too bad, if you can't stand the truth about
today's cheap plastic SW receivers
(with possibly the exception of the Sony 7600GR). Everyone has the
right to their own opinion - getting
defensive, or outright aggressive, is a sign that maybe others are
right...

4091. Re: Inferiority complexes. Get over it, it's only shortwave radio.

Right off the whips, I prefer the E-10. It's easier to use, the dispay is
better, and the sound is better. In my opinion, for the camparisons I made,
the sensitivity of the E-10 also edged out the 1103. I give the 1103 a
slight edge on selectivity, and the 1103 does have SSB which for the price
is a plus. Overall, for a non-SSB receiver, I prefer using the E-10 over the
1103. I like the filters and the antenna tuner on the E-10, the display,
the dial light, and the front layout all, IMO give the E-10 the edge. And,
like you mentioned the E-10 is a very attractive unit along with the feel of
the surface make it a real pleasure to use.

We were somewhere around Barstow, on the edge of the desert, when the drugs began to take hold. I remember dxAce <dxAce@milestones.com> saying something like:

>> Who knows what happens to the signal on its bouncy journey across 1000
>> miles of open ocean.
>
>Well, it sure doesn't shift from USB to LSB on its trip! You have a receiver
>problem.

Looks like you were right in that. I was playing with the IF shift on USB and LSB while on 7590 - at that time, both sidebands were in evidence then the lower sideband disappeared when I went back to it, leaving only the upper one which is now coming in strongly.

Quite why it was showing that effect, I don't know. Honestly, it was coming in clearly on what appeared to be LSB prior to that.

Thanks for the nudge.

No thanks to Telemon.

So, are you asking if people are getting rude, using foul language and don't seem to give a crap about each other? If so, yes, they are. The sure cure for that would be to increase the code requirement to 30 words per minute for general. Faster for extra. Along with that, NO license of any kind without an engineering degree. This all wouldn't do anything about lousy operators. What it would do is reduce the number of new hams. After a while, we would be down to 100 or so nationwide. The bands would get much better because there would be virtually no one using them. Something that you seem to have failed to consider is that society in general is adopting these traits you find objectionable. New hams tend to be more objectionable (under this criteria) than old. Is it because they didn't spend hours studying code? No, it's because they are products of the society they live in. Americans are known worldwide as pushy, arrogant, self centered bastards. There is a reason for that, they are.

Switcher,

For most applications using "Receive Only" Matching
Transformers (MT) the Idea is to step down the Voltage.
If the Antenna-Side of the MT has a Voltage difference
of 0.9uv (Weak Signal) to 180uv (Strong Signal) and the
Receiver-Side of the MT would have a Voltage difference
of 0.3uv to 60uv which most Receivers could better
handle.

It is my simple understanding the two things that we
wish to accomplish with the Receiver-Side of the
Matching Transformer is to Match the Impedance
of the Receiver's Antenna Input for the Range of
Frequencies we hope to hear and to adjust the RF
Signal 'differential' to better match the Limits of the
Dynamic Range of the Receiver's Circuitry.

someone correct me if i am wrong - iane ~ RHF

My point was that few people here think beyond the dipole, quarter wave
vertical, or shortened mobile vertical. And all of those for HF. The
group is broad minded in many ways, but very narrow in others.

No license without an engineering degree would be fine by me. And
follow it by one that requires complete knowledge of the National
Traffic System. Which would be more inportant by far if you want to
keep the traditions up.

How many here know how to pass traffic properly? Bet I can draw a line
in time. And it had nothing to do with license class. I was a tech at
the time. But I learned how to pass traffic, and how to be net control
as part of the NTS. Because I had people on our local nets that
enforced the rules. On checking in, out, and passing traffic. Traffic
up into the system, and down to the final recipient.

That, my friends, was the difference. Not CW.

Thanks for the response Steve. I wonder if spec wise that superadio II would outperform the GE P780. Brenda Ann? What do you think? On a lazy susan using PVC loop, I'd be interested to know your opinion.

4119. Superadio II Reviews

Newsgroup: rec.radio.shortwave
Date: 2006-05-09 02:16:04 UTC
From: Frank <fjbals@sbcglobal.net>
Message-ID: <EXS7g.67800$_S7.26977@newssvr14.news.prodigy.com>
Source record: 73377

Check out the reviews below:

http://www.transistor.org/collection/ge/ge19.html

BEST PORTABLE RADIOS FOR MW DX

1. Sony ICF-2010 --- Still the one. After years of production, the 2010 still sits atop the mountain of MW DX portables. Unmatched in features and performance important to MW DXers. In dozens of side-by-side tests with numerous portables, the 2010 always comes out smiling. Filter options and mods available are a plus.

2. C. Crane CCRadio --- Usually a close second to the 2010 in side-by-side tests of sensitivity (some users report equal or better sensitivity than the 2010). Selectivity quite good for domestic (i.e., 10 kHz spacing) DX; needs a filter mod for split-frequency DX. Doesn't have the sometimes helpful features of the 2010 (e.g., synchro; ECSS). There is apparently some variability in samples (common among portables) that result in differences of opinion regarding this radio. Still, of the three I've seen, all performed extremely well, especially after alignment. Early reports of the new CCRadio Plus suggest that it may be better than the original.

3. Panasonic RF-2200 --- This discontinued, 1970's era analog radio remains a marvel of engineering. From its raw sensitivity on MW to its rotating "gyro" AM antenna to its two selectivity bandwidths, the RF-2200 is one of my favorites for MW DX. The only analog portable I've ever seen that gives 10 kHz read-out on MW (except for the Barlow-Wadley XCR-30 (which isn't very good on MW)). Audio is also very pleasing. Note that MW band coverage stops at 1600 kHz.

4. GE Superadio I or II --- The first two of the popular Superadio series and easily the best. Excellent construction quality with separate circuit boards for different stages, a high-quality variable capacitor (vice tuning diodes), etc. Superb sensitivity on MW and excellent selectivity for domestic DX. Coverage stops at 1600 kHz though and dial read-out is coarse. Best audio of any portable. Long discontinued.

I've never done a quantitative side by side comparison of the two radios. I suspect there won't be a huge difference between them, though. There COULD be a scotia bit more stage gain in the SRII, since it uses newer silicon technology whereas the P780 is using germaniums. Theoretically, the noise floor should be lower on the newer set, which would, again, theoretically allow reception of lower signal levels. I'm not sure though how applicable this is to AMBCB signals.

Under normal daily use with a good listening level, I have gotten several
months use out of an SRII. They claim over 450 hours on a set of batteries.
I think that claim is based on zinc-carbon batteries.

4123. NPR Shop special offer: Free E10 w/purchase of E1XM

Offer valid from 8 May to 18 June.

http://shop.npr.org/webapp/wcs/stores/servlet/ProductDisplay?catalogId=10051&storeId=10051
&productId=12854&langId=-1

Not a bad deal, really...although I find that the E5 and E100 are
better niche-fillers (E5 being a better quality compact portable and
the E100 being a nice option as an ultra-compact radio).

But, hey, if you're in the market for an E1 and don't have a '7600GR or
DE1103 or something of that size/class, then this deal is pretty sweet.
Or sell the E10 on eBay, and you'll be getting your E1 at a
significant savings.

Now, I'll await Cuhulin to start up with moronic ranting against
NPR...oh, and perhaps that gosmithwhisper guy will try to turn this
thread into another "S350 is junk" rant-fest.

This really should be another thread and it should not be cross posted
to the amateur news groups so I dropped it.

The objective is the impedance transformation. The voltage
transformation is a result of the impedance transformation.

I've wondered about whether the input radio is responding as a voltage
or power sensing device. The answer is power because the receiver input
is low impedance so the transformer is not changing the dynamic range
of the antenna/transformer/radio as power in equals power out of the
transformer.

A problem with the way some questions above are posed is that there are
not enough specifics defined so I'll define them. Let's say this is in
regards to a long or a random wire antenna. As a single element in the
air it will function as a voltage common mode antenna. This one element
is really half an antenna. For it to do useful work you need an RF
ground. You also have the problem of getting the power it develops to
be absorbed by the radio input.

The voltage type transformer provides the impedance transformation from
the high impedance of the wire to low impedance of the receiver input
or coax of the same value so the energy is transfered efficiently.

Now the transformer (UNUN) can be wired in more than one way. One way is to use the radio ground, which is in part the mains system ground as the RF return. This is just fine to do as long as your local mains ground is quiet in the frequency range you intend to use it. However, this is not likely so you create a ground with the explicit purpose of being the RF ground. This can be a ground rod or radial wire on or under the ground routed under the wire antenna.

Another benefit is a static charge on the wire is shunted to ground instead of through the radio input.

For an extreme cardio workout, haul a Sat 600/650 around on your bike. They
outweigh the 800 by a considerable amount.

When did GE start using varactor tuning in the SR instead of a
mechanical variable capacitor?

When the SRIII came out. Crappy system, too. Almost impossible to make it
track. I believe there's a DC/DC converter in there that boosts the voltage
up to enough to make an adequate frequency excursion.

Does the book say how the new prisoners learned about the code matrix if
they couldn't talk to the other prisoners? Maybe they passed around a
diagram of the matrix.

I would think the varactor tuned circuit also had a poor 'Q' compared to
the mechanical capacitor design.

That begs the question, in what way is the 7030+ sync' far ahead of
Drake's selectable sideband sync'?

I'm not too conversant on varactors, e.g. their comparative ESR... but
purely from the point of view of an L/C tank circuit, 200pF is 200pF. The Q
of the circuit, all other things being equal, should remain close to the
same.

I tested the Drake R8B side by side with the AOR 7030 for a month and no ways is the 7030+ sync detector superior.
Both are very good, but the Drake R8B is superb.

Telamon,

The objective is the impedance transformation.
-R- True

The voltage transformation is a result of the
impedance transformation.
-R- True - However for most situations the Voltage
Transformation is a good thing and another
benefit in using the Matching Transformer.

I've wondered about whether the input radio is responding
as a voltage or power sensing device. The answer is power
because the receiver input is low impedance so the
transformer is not changing the dynamic range of the
antenna/transformer/radio as power in equals power out
of the transformer.
-R- Yes - WRT the Matching Transformer Power "In"
and Power "Out" are the same. - It is MHO the the
'relative' Voltage Dynamic Range between the
Antenna-Side and Radio-Side of the Matching
Transformer does change. The Receivers Input is
Low Impedance - However IMHO it is the Voltage that
is being 'sensed' and processed within the Receiver
from RF to IF and then AF Power Ampified into an
Audio Signal.

A problem with the way some questions above are
posed is that there are not enough specifics defined
so I'll define them.
-R- True.

Let's say this is in regards to a long or a random wire
antenna. As a single element in the air it will function
as a voltage common mode antenna. This one element
is really half an antenna. For it to do useful work you
need an RF ground. You also have the problem of getting
the power it develops to be absorbed by the radio input.
-R- OK.

The voltage type transformer provides the impedance
transformation from the high impedance of the wire to
low impedance of the receiver input or coax of the same
value so the energy is transfered efficiently.
-R- The Key-Objective in using the Matching Transformer
is to 'match' the Impedance of the Radio-Side to the

Antenna Input {Impedance} of the Radio.

Now the transformer (UNUN) can be wired in more than
one way. One way is to use the radio ground, which is
in part the mains system ground as the RF return. This
is just fine to do as long as your local mains ground is
quiet in the frequency range you intend to use it. However,
this is not likely so you create a ground with the explicit
purpose of being the RF ground. This can be a ground
rod or radial wire on or under the ground routed under
the wire antenna.
-R- Yes - The selection and use of a Ground {Grounding
Point} can contribute significantly to the performance of
an Antenna + Matching Transformer + Feed-in-Line + Radio
System.

Another benefit is a static charge on the wire is shunted
to ground instead of through the radio input.
-R- True

To Re-State My Two Points :
* To my way of thinking Matching the Impedance
of the Radio-Side of the Matching Transformer to
the Radio's Input Impedance 'optimizes' Signal
Transfer from the Antenna {Ground} to the Radio.
* Plus reducing the Voltage Dynamic Range of
the Signals coming out of the Radio-Side of the
Matching Transformer 'feeds' the Receiver with
Signals that the Radio can more easily process.

it's just the way that i envision things - iane ~ RHF
.
.
.
. .
.

>group is broad minded in many ways, but very narrow in others.

Oh, I think people think about them. They probably just don't talk
about
them as much. You think I'm stuck to HF? Wanna come look at my
latest 144 yagi that is nearly as long as the f/b width of my house?
"30 ft boom"
Seems I just commented about rat shack UHF antennas yesterday if I
remember right. I usually talk about what other people talk or ask
about..
To tell the truth, I'm about bored with the whole mess, and don't post
as
much about any kind of antennas as I used to. I've got so many sticks
in the fire
lately, ham radio is just one wee small area I mess with. And I'm
getting more and
more bored with it every year. I used to be able to do 55-60 wpm on CW
in the
late 80's.
But due to my lack of activity the past few years, I'm slipping down to
snail
pace CW. Now I can only do about 35-40 wpm, and it gets a bit slower
every
year. If you want to talk about different topics, it's up to you to
start them.
We can't read your mind on the internet...
MK

Speaking of leading to a good paying career, if you're going to learn a skill, how about learning typing instead of Morse? Get on RTTY or PSK31 or one of the other digital modes and develop a useful, saleable skill. There isn't an employer in the world today (except possibly the ARRL) who would be impressed that you know Morse, but lots would like it if you could type.

Bill, W6WRT

Geez, Frank, you don't really judge a person's value or how successful
they are by the type of radios they purchase...?

There are far more important measures of a person's worth...both to
himself and to others.

It's prison folklore, not something complicated. A verbal description
wouldn't take much time. Most probably, it was scratched on the wall
of the cell.

Dig, dig. There's a couple of pages on it in "The Codebreakers" by
David Kahn, in the chapter on Russian Codes and Codebreaking. It
stated that experienced senders could get 10-15 words a minute. The
example given for the 5x5 Latin alphabet combined i and j into one.

Same cheap junk as Tecsun/Eton BCL-2000,3000 !

"Million-Dollar Looks for $100" - Analog w/digital display receivers do not have the stability of digital phase-locked loop (PLL) receivers.

I opened up the back of the radio, before returning it to RadioShack - it was mostly hollow inside, very cheap, low-grade plastic, and with 1960s-grade electronics. The front filter and band switches and tuning knob are flimsy. When putting the radio back together, I was very careful not to over-tighten/cross-thread the screws, but as soon as, one of the screws started to tighten down, the plastic started to crack. Because of the very cheap quality construction, the radio is very light-out-of-the-box, until the 4 "D" size batteries are inserted.

The filters do a minimal job and only muffle the very good audio. The RF gain control can always be set on maximum, so it only acts like a DX/LOC switch. Even the newer model drifts off the tuned frequency, despite a kludged fix, that only causes ergonomic problems - once a frequency locks on, it still drifts, causing one to have to retune way past the desired frequency, to break the lock. The S350 has significant tuning backlash, which is partly responsible for the frequency drift. There are images all over the SW bands, being a cheap, single-conversion superhet. The speaker grill is plastic, the digital readout is low-resolution, the antenna doesn't lock into place, and the carrying handle is cheap, smelly, imitation-leather.

Instead, I bought a Radio Shack AM/FM (for AM DXing) model 12-898 for $25; it has digital PLL tuning (prevents drifting), DX/LOC switch, hi/low tone switch, 3" speaker with metal speaker grill, internal ferrite-bar antenna, lock switch, 20 station memory, almost as

sensitive as the S350, and much better quality - even the antenna locks into place.

Don't be fooled by the "Grundig" name - it used to be made in Germany, but is now made in China, by Tecsun/Eton. Check out the Tecsun/Eton brand of this radio on Amazon (same junk), and show, "lowest rating first", also, look at the reviews for Grundig G2000A. Tecsun/Eton is becoming known for marketing jazzy, pretty radios that are poor quality/performers; they bought the rights to market products, under the "Grundig" name, hoping consumers will think they are still made in Germany.

With all that being said, with the restructuring of the 50K watt clear-channel AM stations, in the 1980s, AM DXing is not what it used to be, in the 1960s and 1970s. For example, many stations out West now have to use directional antennas, that cannot be picked up on the East Coast. All the hype about the CCradio, Superadio III, and S350 being, "DX machines", is nonsense, and with the clear-channel situation, certainly not worth the extra expense. With the Radio Shack receiver, I can easily pick up WWL 870 New Orleans (1000 miles), WHO 1040 Des Moines(900 miles), WABC 770 New York, and my favorite, WLW 700 Cincinnati - same as the S350. These stations can easily be picked up with standard car radios.

For just, as little as $30 more, one could purchase the Sony ICF-SW7600GR instead; it has digital PLL, SSB, and synchronous detection - the ICF-SW7600GR is many times the radio compared to the S350 (I'de be kicking myself, if I was stuck with the S350).

Every plastic cabinet and wood cabinet and metal cabinet radio I own and ever have owned,I opened up the back (some of them,the fronts too,depending on how such and such a radio is made) of them.Mostly,only to see what it looks like in there.I never opened any of them up and then took any of them back to the stores.Do you,,,, know what your radio(s) look like inside? There isn't really anything exciting to see inside of radios.Just like them new Sears top loader washing machines with the windows in the top lids.WOW!,, look at all of them duds swishing around in there!

if you had the pana 65rfd, where would it fit in ???

And yes, I have an old Grundig Yachtboy, and I can hear a station on
1602, where the sony gives ... (synt ?) noise .... How's that ??
It looks like the select on the grundig is very nice too, I can seperate
weak 738/RFI-Paris from strong 747am.nl easily, while on the sony I hear
more noise ...

The grundig is from the seventies ...

location Vleteren, Belgium

with a loop, I can receive Beromunster, Rennes, Flensburg, ireland
during DAYTIME...

I remember having to try to sell those as an
RS employee back in 1991-92, and I simply
couldn't do it. Everyone who looked at one
I steered them toward the 440 or another model
that came out that wasn't too shabby (the number
escapes me, but it was in the $99 range and it
was before the 440 got discontinued). One guy
asked me if I was using a bait and switch. I told
him I wasn't; if he was really interested in SW
he should spring for the 440, because it can
pick up stations better, has a digital output,
and can handle an external antenna well. Also
told him that the old Patrolman radio was just
as good as the 360, when you got right down
to it. (The guy went for the Patrolman.)

Hello.

While Drake's synchronous detection circuit is generally excellent, when it is locked on variable-strength signals, it often "warbles." While this is not often noticeable on a "talk/news" program, it is often VERY noticeable on music. (It is often noticeable on the Voice of Russia - whose signal is often quite variable - musical shows; it's also noticeable on the Voice of VietNam's musical shows as well as Radio Bulgarias's and others.) The pitch of a note changes annoyingly - as if the music was "sour-ing." If you own one of these receivers, try it for yourself on a musical show.

This occurs on the Grundig Satellit 800, the (later-production) Drake SW8, and the Drake R8B, all of which use the same circuit. (I do not own the Drake receivers, but I have heard them, and this effect, at friends' houses and at my own house.) This, in my opinion, is NOT really a "major flaw." How often does one listen to music on SW nowadays? Once in a while, my personal Grundig Satellit 800 will "almost" lose lock on a deep fade. Only twice that I can remember (in 6 years of ownership) has it actually lost lock.

However, this NEVER occurs on my AOR AR7030 Plus which "locks" perfectly and completely and which, in over two years of ownership, has NEVER lost lock.

Another practical test (and example) is when the BBC (and a few other stations) shifts transmitters on the same frequency. There is then no signal for 10 - 30 seconds. My Grundig Satellit 800's lock will generally not re-engage - with the radio's AGC set to "slow" and the sync "on" - when the new transmitter comes on the air (I cannot say wthether the Drake R8B or SW8 exhibits this phenomenon as I have not personally heard it on those sets) but my AOR's ALWAYS does, and perfectly too, with no delay.

With my Satellit 800, I must turn off the sync and then turn it back on, also setting the AGC to "fast" when doing this and only after the sync circuit locks can I turn the AGC back to "slow." Two of Drake's service technicians have told me that this is normal behavior so I should presume it is the same with the Drake-branded sets. Again, I do not regard this as a "major" problem (how often does it actually happen?), but note that it can be overcome. Certainly AOR has done so.

The Sony ICF-SW7600GR's sync circuit is far below those two in overall quality. Yet, it too generally performs well. After all, a portable owner is not really trying for exotic DX and, on the types of signals a portable handles well, Sony's sync circuit makes a BIG difference in

the quality of the audio. Selective-fading distortion has always been a "bane" of SW listeners as well as MW DXers and this circuit can totally eliminate that form of distortion.

Others may disagree with me or find Sony's (or any other) sync circuit to be of little use. (However I firmly believe those users do not know how to properly use it.) But the circuit can be turned off if the user does not want it on a particular transmission and I feel it is FAR better to have this circuit when desired than not to have it at all. Especially since there is now no price "premium" charged for it, why buy a comparably-priced portable radio without the circuit?

But I digress. Having compared Drake's synchronous detection circuit and AOR's side-by-side, I can confidently state that, while Drake's is excellent, AOR's is superb.

Best,

Joe

< That begs the question, in what way is the 7030+ sync' far ahead of Drake's selectable sideband sync'? >

If they are crap on the outside, then chances are, they are crap on the inside - sure enough ! Who in their right mind, would buy an analog receiver, when today's modern receivers are digital PLL with station memory. I got real tired of retuning the S350 (newest model, with kludged fix) every few minutes - that damn KHZ lock would start flashing, the backlight would come on, then I would have to fight the neandrathol tuner to break the lock, and it would jump way past the desired frequency - one is always in a race with the kludgy lock mechanism, when searching for a desired frequency ! When switching between bands, there is no memory, so one has to constantly retune on each frequency. Being only single-conversion, the SW bands suffer greatly from images, so any serious SW listening is a joke - dual-conversion would have taken care of that problem. By the way, I really didn't care that I returned the receiver after it cracked - not my problem that the plastic is brittle. Also, two small waskers fell out, when I opened it up, and I never could figure out where they went - oh well. RS tried to sell the the older 2003 model (the one with more problems) and lied about it, saying it was the newer model (it had 2003 on the bottom back of the box). RS is scum, so returning a cracked radio was something that certainly didn't bother me - it didn't matter anyway, because they had a number of S350s in back, that weren't selling (I wonder why)...

RHF,
My point was ...this time the FCC is NOT *eliminating* nor *Outlawing CW.
(as far as we know)
Spark *did* suck, but even so there were those that hated CW.

ARRL threw principle out the window when they caved in to the demands of
the Lambda Amateur Radio Club (LARC). It was a sad day for me indeed when
I opened my beloved QST magazine and there on the pages were photos of
queers on a Tropical DXpedition, and in living color no less. The ARRL
wanted us to embrace a sick perverted lifestyle and be one big happy
family. To me, it was the spark that signaled the death of a once proud
organization, and it turned liberal.

They used to build some very sensitive radios. I still have a "transistor radio" type GE AM radio that rivals anything I've seen for sensitivity. I've played with modifying the AGC and it made it even more sensitive. Biggest problem it has is the small analog dial; very hard to tune small increments.

I'll bet you try to pass yourself off as a Christian.... I guess you never
really learned some of the most important lessons.
The first lesson is to treat *EVERYBODY* with the same courtisy and respect
that you expect from them.

Welcome to my killfile.

PLONK

I have one of Grundig's best radios from the 60's. The US model name is Transistor 1000. I think it was the Satellit 305 or something like that in Europe. I like the radio so much that when I ended up selling my original one in 1980, I vowed to find another. I've never had a better radio for FM, and all the other bands are fantastic as well.

I have one that is not the best looking one around by far, but fully
functional that I picked up at my flea mkt a few years back for $10.
I couldn't believe the amount of bass that pours out of that portable. On
FM, it puts my Sat-800 to shame.
Brenda, what did you end up doing with those square speakers I sent you a
year or 2 ago? I had intended to put one in my Sat 800. They look like a
match made in heaven. Never got around to it though...

Oh, I forgot to add that since the S350 has no station memory, every
time a new band is selected, the radio has to be retuned...

What I don't get is why we are forced to see
homosexuality in areas that have nothing to do with sex, such as the example
you mentioned.

< Snip >

That does not happen on my Drake R8B and I don't recall that happening
on the R8 I used to own. Could be you are not tuned exactly to the
station. Put the radio in CW mode with a larger than default filter to
zero beat the station and then switch back to AM sync to see if that
warbling goes away. If that does not fix it then the Drake might need a
tune up or you have another adverse reception problem like an
additional on channel slightly off frequency carrier.

If you have it enabled the 7030 will auto tune itself so you won't see
that problem.

I own both radios and the sync performance is comparable between the
radios but for the side band selectable feature on the Drake, which the
7030 does not have.

By the way a station you can hear a warbling 1 to 2 KHz tone on is
Italy's RAI International. The tone changes with the modulation. It is
very distinctive sound and once you hear it you can easily identify that
station within seconds despite not knowing the language.

> Another practical test (and example) is when the BBC (and a few other
> stations) shifts transmitters on the same frequency. There is then no

> personally heard it on those sets) but my AOR's ALWAYS does, and
> perfectly too, with no delay.

I have had the Drake sync drift to the on channel noise or some faint off frequency carrier in the temporary absence of the BBC station switching over. Sometimes it reacquires rapidly, other times it drifted off due to the presence of other weak off frequency signals and then it whines a bit before it re-locks. I have not had the 7030 in this listening situation so I don't know how it would behave for sure but I expect it would not be much different than the Drake.

You can't expect the radio to recover from a no carrier for 30 seconds quickly when you have sync engaged and the AGC on slow. Normally for AM I have the AGC on fast unless the signal is rapidly fluttering. The fluttering is usually due to polar propagation. Slow is normal for SSB. Normal lock time on the Drake R8B is something like 1 to 2 seconds.

Jim,

I still have all four of them, never installed into anything. Actually, they are so inefficient that it takes about 15 watts or so to drive them, and I just haven't had anything short of a home stereo that would do them any justice. Doubt your Sat 800 would drive them very well.

I've had two R8B's in the past six years. I've listened to hundreds of
hours of music and never heard what you're describing. I did hear
something like that on an R8 which was made in the early 90's but that
model had a completely different sync' design than the R8B.
>

Neither have my R8B's. Sometimes it will take a second or two to lock on
a station but once locked it never loses it, even during a deep fade.
>

As I said, the R8B sync' can occasionally take a second to lock,
particularly under the circumstances you describe above. It depends on

how well the sync' circuit is aligned.
>
> With my Satellit 800, I must turn off the sync and then turn it back

I recall seeing posts on this group where listeners say they don't care
about having a sync' detector on their receiver because they can not
hear any significant improvement in the audio quality with one. I don't
get that. The improvement seems obvious to me. This does not include the
R-75, which has a poorly designed (defective?) sync' detector.
>

I recently heard a ham' say he was putting up a 185-ft tower for his station. He apparently works for a company that sells and erects towers for commercial operations, which gives him access to the equipment for a major project like that.

>What is one behavior on our ham bands that might or could make you loose
>interest in ham radio and leave if you heard it or if it became previlent?

None. I have fairly thick skin, and I'm rarely bothered by anything
that
happens on the air. I do have a VFO ya know... IE: tuning knob for all
you without an EE... But like I say, I'm pretty bored lately, I don't
get
on the air near as much as I used to. The boredom has nothing to
do with the people on the air. It's from farting with the same basic
stuff
since I was in jr hi school... I don't get much thrill anymore.. Only
about
3 clicks above talking on a telephone. Which I hate btw... Ham radio
at the house is too easy. No challenge anymore.. I turn it on, and yak.

Wow...
If it wasn't for mobile/portable operating I would be about radio dead.
At least there is still some challenge in that area... IE: trying to
put out
a decent signal with shrimpy antennas, low power, etc..
Yea, I've tried all the digi crap too, before I get 90 people telling
me to
get with the modern techniques....PSK31, SSTV, etc, etc, ad nausium..
I'll do it for two weeks, and then the boredom sets in... I kinda got
into
SSTV, but PSK31 bores me to tears... Did I say I generally hate to
type...

>And does it seem like it's going that direction?

I see no difference from what it's been the last 20 years or so, except
there
are far fewer CW ops on the air lately. I tuned 40m CW the other night,
and
didn't hear a single QSO... And I'm talking the lower CW section, not
the
novice band.. But do I whine? Nope...Times is a changing, and there is
not much I can do about it. The argument that CW weeds all non hackers
is total BS... All it weeds out are the CW lazy, not the troublemakers.
A dedicated troublemaker will pass any tests needed if that's what it
takes to stir it. You should have heard 75m in the early -mid 80's...

All had to pass code tests in that period. 75m is actually cleaner
now,
than it was then. Mainly due to Hollingsworth cracking his whip a few
years ago.
MK

Even more amazing is that no matter who starts the thread about CW, the
same group of people will post the same tired old reasons about why CW
is still a useful screening tool for prospective hams and how CW is
still an important way to communicate. And they do not want to hear
about the world as it really is in the 21st century.

If I had the time at the house, I would have invested more time and $$$ in
the shack that what I did in my service truck.

> Wow...
> If it wasn't for mobile/portable operating I would be about radio dead.

For the most part, I am only able to get on the air mobile from mid march
until after the first frost. I am a heating and a/c contractor in south
Mississippi....8am - 9pm work days, 5+ days a week doesn't leave much time
for anything else.

> At least there is still some challenge in that area... IE: trying to
> put out
> a decent signal with shrimpy antennas, low power, etc..

Not too much of a problem with enough money.... When I am on the road
between calls, if I want to talk, I am going to talk, even though most of
the time I am listening. Like I said earlier... I have more invested in the
mobile station in my service truck than I have in the shack.

> Yea, I've tried all the digi crap too, before I get 90 people telling

I spend too much time on the 'puter already, and FWIW, I was on packet in
'84 with a C-64, and a homebrew modem, and customized my own software for
it.

> MK

I have been active recently with teaching a class for folks to get their
licenses and part of it is CW. Being here in south Mississippi and only
about 60 miles from the gulf coast, we are very aware of the communications
limitations and what works an what doesn't when the lights go out. CW is
only another weapon in our arsonal of communications tools......keep in mind
that not much works when there is *NO* infrastrucure left intact.

Ain't that major. The towers come in sections which stack on top of
the previously erected part.

After a long conversation with a local Federal prosecutor about the new "anti bother"
legislation I have decided it is pretty safe to post facts and avoid expressing personal
opinions. So from time ot time I will post links to radio related information that I
have found usefull.

My only opinion about this link regards the realization that while I thought I was going
a little overboard with the feritte for comon mode noise suppresion, I see I have to add
a lot more to even approach 1K impedance! I have ripped out my entire radio room
and intend "to do it right" this time.

http://www.yccc.org/Articles/W1HIS/CommonModeChokesW1HIS2006Apr06.pdf

The R200swl and r200slwer "at hotmail" and "at yahoo" accounts are abondoned.
Given the rapid thread drift toward non radio topics I doubt if I will ever reply to any
thread.

Enjoy or ignore.

Terry

http://www.yccc.org/Articles/W1HIS/CommonModeChokesW1HIS2006Apr06.pdf <

Well! This certainly levels a well-placed karate chop at the concept of one-at-a-time ferrite beads, cores and chokes, doesn't it? It appears that outfitting one's radio gear with enough of these things could easily exceed the cost of the radio, antenna and monthly electric bills for 10 years!

OTOH, for us guys (and I mean that in the NY/Chicago sense of the word, where girls and boys are all "guys") that live in the city, it may be our last best hope.

Bruce Jensen

For isolated characters, a good ear could probably differentiate them
with 22 millisecond and 20 millisecond bit times (45.5? and 50 Baud).
I had a friend who said his uncle could do that.

But if the characters ran together, especially with a 1 or 2 bit stop
time, your brain would have no way to seperate them. Neither can some
simple hardware decoders.

4248. WRTH Summer Schedules File Available For Free Download

Newsgroup: rec.radio.shortwave
Date: 2006-05-10 18:42:00 UTC
From: dxAce <dxAce@milestones.com>
Message-ID: <446233F8.9C24ACCB@milestones.com>
Source record: 73405

WRTH is pleased to announce that a Summer schedules file is now available for free download at the WRTH web site, http://www.wrth.com
Please follow the simple instructions on our site to download the file.

The file is pdf document and you will require the free adobe acrobat reader 5 or above to read it (a link to the Adobe website is on our page).

The file contains Summer 06 broadcasting schedules from all International and selected clandestine/target broadcasters. Also included are 'By Frequency' LW, MW and SW listings of the stations in the file plus a new feature for the Summer web file: broadcasts in English, French, German, Portuguese and Spanish.

The file contains 113 pages and the page layout is the same as WRTH. and is approximately 450k. We hope that you find this file a useful accompaniment to the WRTH. Regards, (Sean Gilbert, International Editor, WRTH, May 10, DX LISTENING DIGEST, Glenn Hauser)

Hello.

My terminology may have been confusing and hard to understand. What I meant was that the pitch of a sustained musical note will change while using the Drake synchronous circuit. This happens when the signal is subject to fading and the circuit attempts to maintain lock. It is most noticeable on musical shows, naturally. The note sounds as though it's being lowered a semitone or sometimes even more - in other words, the music sounds as if it's going a bit flat or "sour."

Last night, I listened to VOR's "Jazz Show" on the Satellit 800 instead of the AR7030 Plus. Naturally, during the show, the phenomenon never occured at all. However, when, at 0258, I switched frequencies (from 9665 kHz to 9860 kHz), and VOR was broadcasting their interval signal (The Great Gate of Kiev), you could hear the "note-flattening" effect very easily! And, as I said, this sort of thing never occurs with the AR7030 Plus.

I noticed this "warbling" (probably a bad term but I don't know what else to call it) almost as soon as I bought the set back in 2000. When I had occasion to call Drake, I queried their technician about it and he said that performance was normal. A couple of years later, when I had occasion to send the set to Drake for adjustment and repair, I asked the technician if this could be corrected. He said Drake was well-aware of the phenomenon but that it was inherent in the design of their circuit. He told me most people do not notice it but those with "perfect pitch" (something with which I have been blessed) will hear it.

To make myself as clear as I know how, I would rate the Drake synchronous detection circuit as 4 5/8 "stars" out of 5 and AOR's as 4 7/8 out of 5. (The fault with AOR's sync circuit is the split-second muting which occurs whenever the sync is engaged and you re-tune, either with the knob or with the remote control. There is NO muting at all when tuning or re-tuning via the RxWINGS program so, at least for me, the point is generally moot.)

In any case, it is my opinion that during actual listening, the AOR AR7030 Plus' synchronous detection circuit is "superb" and the Drake circuit is "merely" excellent.

I can (and do!) live with both.

Best,

Joe

If the AOR's synch is SUPERB, and the Drake's is excellent, where does that leave the Bell and Howell, who's designers felt the circuitry was superb as it was and opted not to inundate their users with meaningless knob twiddling? I think you know the answer to that as well as I do....

I should take a look at my 7030 schematic.....I wonder if they are
using separate loop bandwidths for the sync detector pll circuit. When
acquiring a signal, a wide bandwidth would be used for faster acquisition
time, while after the circuit has settled a narrow loop bandwidth would be
switched in.
Maybe, with later iterations of the R8 Drake widened up the loop bandwidth a
little bit.

Pete

NASA Science News for May 10, 2006
The Sun's "Great Conveyor Belt" has slowed to a record-low crawl, which has important implications for future solar activity: Solar Cycle 25 peaking in 2022 could be one of the weakest in centuries.

GRIMETON RADIO/SAQ INFORMATION

There will be transmissions with the Grimeton Radio/SAQ alternator on VLF
17,2 kHz on the following dates:

1. May 16th at about 09:30-10:30 UTC

2. May 17th at about 09:30-10:30 UTC

3. May 18th at about 09:30-10:30 UTC

4. June 5th at 10:00 UTC

5. July 2nd. The "Alexanderson" Day. Call you back with time schedule.

No QSL reports are required except on the July 2nd transmission.

Regards

Lars Kalland/SM6NM

4273. Fixed Loop On-a-Roof - Great for Monitoring that Hard-to-Get AM/MW Radio Station

Newsgroup: rec.radio.shortwave
Date: 2006-05-10 23:06:45 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1147302405.036709.193850@v46g2000cwv.googlegroups.com>
Source record: 73430

JP,

Fixed Loop On-a-Roof - Great for Monitoring that Hard-to-Get
AM/MW Radio Station [On-the-Roof / In-the-Attic / Out-in-the-Yard]
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9430

For that type of single AM/MW Radio Station "On-Frequency"
Monitoring an Out-Side Fixed 'Tune' Loop Antenna can
be very effective for providing a Clear and Clean Signal
for Operational Monitoring of the Transmitter's 'actual'
{Over-the-Air} Broadcast Signal.

Usually getting the Element of the Loop Antenna at least
Three Feet above the Roof (Five Feet is better) will get
the Loop out of the Building's RFI / EMF Noise Envelop.

1. Build the Loop Antenna Element (Hula-Hoop) with a
Weather Proof Box for the Fixed Tuning Capacitor and
Coax Cable feed-in-line to the Radio / Receiver.

2. Located, Position and Tune the Loop Antenna Element
for the best Signal of the "Target" AM/MW Radio Station.

3. Listen and Enjoy 'that' AM/MW Radio Station 24/7 :o)

READ - One Station "Fixed" Out-Side AM/MW Loop Antenna

- - - "Jay Policow" <jaypolicow@...> wrote:

The AM radio station where I work has studios located
about 5 miles away from the transmitter site (50 KW on
1080 KHz) so the signal is pretty strong at this location.

However the engineers bought specially tuned (for our
frequency) loops for roof mounting. I would estimate
they are on the order of 3 feet diameter. Of course,
they may not have been designed for maximum possible
capture... since the signal is so strong I assumed they
just wanted a solid clean signal better than what they
could get inside the building.

Incidentally, this is about the size of the Wellbrook loops.

Interesting. I had often wondered about that subject but I was to lazy to google it. So you would have to tune the loop (going outside) for every station you wanted to hear? That doesn't sound any good to me.

Can't you tune the loop from inside? It wouldn't make any sense if you couldn't. {?}

At the same time the price of gasoline has gone up, the minimum wage has gone up, the stock market has gone up but in just about all areas of society mutual respect and courtesy have gone down.

I think it has very little if anything at all to do with Morse code.

I listen to some (but not very much Shortwave) Shortwave radio and local area talk radio shows on AM and FM. (Paul Gallo and JT and Dave and Mississippi's Talking radio talk shows on www.supertalkms.com FM 97.3) on FM and AM.And some local area Ham Radio Operators.I get plenty enough of radio news from the radio programs I listen to.I am not a follow the pack kind of a dude,I listen to only a few radio stations which interest me the very most.I dont stick with one radio most of the time,I like to swap them around once in a while.I dont listen to kook radio shows at all.

When I was born (1-10-33) there were approximately 130,000,000 Americans. I think we are approaching 300,000,000 now. I'm still relatively polite, I think that may be why I get so many funny looks when I speak to folks. Poor as we were, I think I liked the 30s and early 40s a whole lot better. Main thing I've noticed about the more recent citizens Is that there have never been so many with such high self esteem and so little reason for it. (G) I'm a relatively recently licensed Ham (Tech-2002, Gen'l-2005) Had no real interest in CW but realized I had to pass the test to advance beyond the no-code Tech level (Besides, I figgered actually having passed even the elementary 5 WPM CW test would eventually be a prideful thing.)

I'm a couple decades younger than you (my mother was born in '33), but I
have sure seen a massive change in societal attitudes since I was young.
Used to be that people understood the concept of earning what they get out
of life, now everyone seems to think they're entitled to anything they want
for free. Kind of sad, really.

Yessum, I agree. I always hated to work, but I always understood that it was
something I had to do.
I was a high school dropout, but after I got out of the Army I picked up two
college degrees. I never really amounted to much, but did pretty well for a
dropout, even taught Industrial Arts in a Dallas Junior High
School for eleven years. Finished my working years as a Design Drafter (CAD)
for Halliburton.

JUDAIC-JESUIT-CHRISTIAN CAPITALISM (JJCC) BEHIND WAR AND PEACE

A discussion-group which deals in Sociological-Political-Economy
and History to the present time and the future!
In particular Sociology and Social Science are studies about the
origin, development, organization, structure and functioning of
society and the fundamental laws of social relations.
Political Economy is a study about the relationship between
politics and economy and their influence on social institutions,
the individual and society.
The Basis for this Discussion is the Compiling of Information and
the Attempt of an Analysis of the discovered Elements behind the 2
World-Wars to the present Wars in Afghanistan, -Iraq, -Palestine
and the hol(l)o(w) caus(e)t or holo-hoax!
Participants are invited to elaborate and investigate on the themes!
Just follow the chapters on the index-board, please!

Just visit us on this web-site:

http://forums.delphiforums.com/oldfri/
Please add this web-site to your links on our web-site!

Some further themes of our discussion-group are as follows; -
"Great Britain's" desire to Re-Conquer the USA, Drug-Trade, Irish
Famine, Australia, as seen on:

http://forums.delphiforums.com/oldfri/messages?msg=20.23

I don't have perfect pitch so I guess I have not heard the effect you noted. I'm trying to understand your example so I can hear it. Are you saying that on the voice of Russia Interval signal itself one of the notes is flat and only the one note? If that is the case is that a high or low note? I'll have to listen to both radios to see if I can hear the difference. Even though I don't have the perfect pitch ability I should be able to hear this as a difference between the radios but if you have more information maybe I can't hear the effect.

Both radios have selectable filters and passband tuning that shape the sound. Usually I don't hear any tonal effects due to the sync but I can easily hear tonal differences due to:
1. Tuning the VCO from right on to slightly off frequency.
2. Filter selection.
3. Passband tuning.
4. Audio tone controls.
5. Notch filter.

Generally how the audio sounds is mostly affected by the filter and passband tuning, which I fiddle with to get the best high frequency response depending on conditions. I guess I would be surprised that a change in the audio would result from using the sync on the Drake and that something else is causing it like the filter response not being flat on the Drake or the way the operator controls are adjusted.

Maybe something I can listen to that is more repetitive like the tones on WWV. Do you hear a difference there?

On *TOP* ??

That would explain certain difficulties I've been having with antenna installations over the last few years....damnnnnnnn....

The cost over runs, the unexplained accidents, the ALWAYS too short guy wires, the laughing behind my back..it's just possible there may be a connection here somewhere.

Some loops are designed to be tuned remotely but I don't know of a
commercial one you could buy. On scheme is to send a DC voltage down
the coax to the remote antenna that varies the capacitance of a
variactor diode to tune the antenna.

I guess you missed it in the papers, pretty much just a 1 day story,
but Bush the Lesser has borrowed more of your money than all of the
previous presidents COMBINED! A trillion plus on the credit card and
3 yrs to go! But it's not so much your money, as your kids money, and
your grandkids money, and their kid's money, (if we're all luckier
than I expect.) One thing you can say about those "tax and spend
Democrats," they're a hell of a lot cheaper than these borrow and
spend Republicans.

What is sad is that in California they deny the Boy Scouts public park access, but it is OK for gays to have public sex in the same parks without fear of being arrested.

The information is geared for Ham transmit but some of it is useful on
receive. If you have receive power mains noise problems then I
recommend EMI filters that you can buy built into power strips. Those
power strips are easy to buy and use.

1K ohm common mode choke is pretty good on a receive coax. More is
always better of course. Lossy ferrite is good on the receive coax but
as noted in the guy's paper it is a problem on transmit.

I guess I'd better throw in my "ABS plastic" PRO-43 scanner also!

If we threw away everything made from plastic, we wouldn't have much left.
Hell, I wouldn't have a television, even. Let alone a radio less than 40
years old.

I forgot that I also had a DX-150B. Almost identical to the DX-160 but with a slightly different dial scale and a few internal differences. I think the knobs were different too. I bought it at a garage sale for $15 and sold it for about $60 to a guy that wanted to display it on his office desk. Must have been a nostalgia thing.

That's what I thought you meant. I did hear this on an R8 but not on my
two R8B's.

Are you sure you mean perfect (absolute) pitch? That's when you know the
musical letter assigned to any note you hear without a reference note.
It's quite rare. I have relative pitch. I can hear a very slight change
in the pitch of a tone. I also know when I'm hearing a song in it's
original key. For example, I can whistle a popular song in it's original
key but I couldn't tell you the actual letter of that key. That's why
it's called 'relative'.

I don't think I could live with the ergonomics of the '7030'. I know I couldn't live with the menu carousel on the original R8. I hate going through menus to change a setting. I want buttons. The more the merrier. I can change the most commonly used functions on my R8B in the dark.

I'd like to hear an audio file of the 'warbling' phenomena on your R8B. Could you post one somewhere for us to hear?

4328. Re: Fixed Loop On-a-Roof - Great for Monitoring that Hard-to-Get AM/MW Radio Station

Newsgroup: rec.radio.shortwave
Date: 2006-05-11 07:35:00 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1147332900.096084.271190@i39g2000cwa.googlegroups.com>
Source record: 73535

BCB Lazy Susan,

This is a Loop Antenna that is set-up for a "Target"
single AM/MW Radio Station "On-a-Specific-Frequency"
originating from a distant City / Town / location.

Once it is Set-Up - Positioned and Tuned :
The Variable Tuning Capacitor is "Fixed" Locked-in-on-Frequency
and pointed at the Radio Station Location and does not need an
other adjustment.

FWIW - If you want an All Band AM/MW Loop Antenna
then you have to design and build a different kind of
Loop Antenna with either 'near' Adjustable Mechanical
Tuning -or- 'remote' Adjustable Electronic Tuning.
toconsiderations.

All Band Loop Antennas - Read these three Messages :
* Low Noise Receive Only Coax Cable Loop Antennas for 160 - 10 meter
HF Bands
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/5172
* "Hula Hoop" Loop Antennas and more . . .
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/1949
* Passive and Active AM/MW Loop Antennas
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/1134

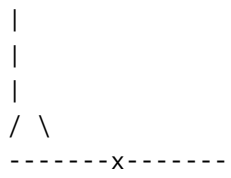
-AGAIN-
2. Located, Position and Tune the Loop Antenna Element
for the best Signal of the "Target" AM/MW Radio Station.

This specific type of Loop Antenna is not designed for
"All Band Use" just for a single "Target" Radio Station.

For me up here in Twain Harte, CA that "Target" Radio
Station is KGO 810 kHz in San Francisco, CA which
is about 120 Miles away and has a signal that goes
mostly North-and-South and I am due East of it.
The "Fixed" Loop Antenna allows me to hear KGO
reasonably well both Night-and-Day.

READ - One Station "Fixed" Out-Side AM/MW Loop Antenna
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/5065

hope this helps - iane ~ RHF



4329. The Shortwave Antenna used determines the type of Matching Transformer

Newsgroup: rec.radio.shortwave
Date: 2006-05-11 07:47:27 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1147333647.184732.143950@u72g2000cwu.googlegroups.com>
Source record: 73536

BT,

The Shortwave (SW) Antenna used determines the type
of Matching Transformer you will want to use with it.
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9436

The type of Shortwave Listening (SWL) Antenna that
you are using will help in determining the type of
Matching Transformer that you would wish to use :
Plus the Range of Frequencies that you wish to cover
with the SWL Antenna and Matching Transformer.

SINGLE (1) WIRE ANTENNAS :
For many forms of Longwire {Random Wire} Antennas
Horizontal, Inverted "L" or Sloper used for 500
kHz to 30 MHz a 9:1 Matching Transformer is often
recommended. These are single (1) Wire Antennas
that Require a Ground to complete the other half
of the Antenna-to-Ground System.

TWO (21) WIRE ANTENNAS :
For many forms of Dipole {type} Antennas : Dipole
Windom, Inverted "V" and other "Balanced" Antennas
being used for 500 kHz to 30 MHz a 4:1 Matching
Transformer is often recommended. These are Two (2)
Wire Antennas that do not require a Ground to complete
the other half of the Antenna-to-Ground System.

A SOURCE FOR THE "RIGHT" MATCHING TRANSFORMER :
QRP BALUNS => http://www.geocities.com/qrp_baluns/
The eBay Seller "RF Junkie" offers a variety of
Matching Transformers that are specifically designed
for a large number of different types of Antennas.
His Matching Transformers for the most part designed
for "QRP" [Low Power] Transmitting so they are built
more than 'good enough' for a "Receive Only" Shortwave
Antenna application.
http://www.geocities.com/qrp_baluns/product.html

RF Junkie
http://search.ebay.com/_W0QQsassZrfjunkieQQhtZ-1

Erickson Engineering {RF Junkie} eBay Store
http://stores.ebay.com/ERICKSON-ENGINEERING

Here are a few Shortwave Listener (SWL) type Matching
Transformers that can be used with Random Wire type

Antennas [Single Wire with a Ground] a Coax Cable
feed-in-line and most Shortwave Radios and Receivers
that have an SO-239 Jack or a 1/8" Mono-Jack as their
External Antenna Input :

* Shortwave Antenna Longwire Transformer Balun
LMZ-50 => http://cgi.ebay.com/_W0QQitemZ9724368153
For RG8/RG58 50 Ohm Coax Cable with PL-259 Plug

* Shortwave Longwire Antenna Matcher
LMZ-75 => http://cgi.ebay.com/_W0QQitemZ9721309599
For RG6 75 Ohm Ohm Coax Cable with "F" Connectors

* Shortwave Longwire Antenna Transformer 9:1
SWLZ => http://cgi.ebay.com/_W0QQitemZ9724601737
For RG6 75 Ohm Ohm Coax Cable with "F" Connectors

"QB-Series" Antenna Baluns

Thanks.

I'm trying out the shareware program "nucode"
right now. Is this a recommeded way to learn CW?

My long term plan is also to pass the General exam,
then build my own HF CW receiver, and then later
try transmitting low power to see how far I can
go on an empty tank.

I think the 160 has longwave and I believe the 150 uses a mechanical
filter while the 160 uses a ceramic filter. Both are good basic
receivers.

Yeah, if you wanted a retro-looking radio for the shelf the 160 would
do the trick and not weigh a country ton like a tube radio.

Funny you post this. I've been searching around getting ideas to build a loop antenna lately. I can't seem to find to much info on loops for anything higher than 80 meters. Do these just not work as well on the higher bands?

I'm not even sure that David's comment, whether implicitly true or not,
is relevant. RHF is right - different antenna designs are best
optimized using different transformers, depending on whether the
antenna and line is balanced or unbalanced. It appears that RHF got
the right information out in his message - even if for the thousandth
time ;-).

Sounds like there's a bit too much FMing of the "BFO" (local carrier
oscillator).

One bit of trivia I remember reading in an old QEX (I think). Some of the
hams who work with real narrowband modes, (the guy who did "Synchronous
CW", Pettit?), was working on a phase shift keyed narrowband mode and
had a very stable receiver that could output the phase of the signal
it was tuned to. He said that some of the shortwave broadcast signals
were not stable in phase. (My guess, the result of some of these high
effiency digital transmitters). In the short term, the carrier phase
danced all around. This would give a PLL with a relativly short time
constant filter that sort of symptom.

Feedback control systems (ie. the Phase Locked Loop) can be a real bitch.

>In any case, it is my opinion that during actual listening, the AOR
>AR7030 Plus' synchronous detection circuit is "superb" and the Drake

> other lower life form of radio hobbiest. You name it.
>
Let's use proper nomenclature. There is little danger of CW going away. What is going away is Morse Code - replaced by more efficient ways of comunication. We're always asked "What would you do is the only way you could communicate was to turn your transmitter on and off?". Simple! I'd use Tap Code - you know the "CW" with only dots, no dashes - the one used by banging on pipes, the one anybody can use without tons of practice. Arrange the alphabet in a 5 x 5 matrix leaving out K (use 'c' instead). Each letter is addressed by its position in the matrix: a = 1,1; b = 1,2 .... f = 2,1 and so on. These become your "dits" or bangs or flashes or blinks as appropriate. I'm amazed at how few know this.

Does higher bands mean like 160m is higher than 75m or 3.885MHz is higher than 1.945MHz?

Would your Idea be practical Telamon considering the reverse voltage capacitance of a varactor is limited to a small swing in PF? Maybe lots of diodes in parallel?

Ack Ack, 12:59, back to work.

why? or better what makes it higher?

to do so implies that it is accepted that there is soething worng
inherantly with saying or typing "shit" when "shit' is what you mean.

given that words like "shit" "fuck" have an impact beyond their
equivelanets feces, and fornication, why ot use them

the only that does is foisting a morality thatI don't accept

agree the word I mentioned and other are over used but that is a only a
problem in that it lessens their impact not that it is worng

Your choice of language clearly identifies your value system.

The subject you passionately defend is considered immoral by 90+ % of the people in the world, and ALL the world's established religions.

A multicultural society will condone your language and lifestyle; and, YES, you must condone their 'straight' lifestyles. Any right you claim for yourself you must also respect in others with whom you disagree.

Finally, this thread is so far off subject that it deserves a quick referral to the circular file.

All you guys posting to this thread do not know anything about Usenet.

All this crap is being cross posted to newsgroups where there should
be no interest in this bickering, childish behavior.

Before you do any follow ups to this message, right before you hit
your send button, look at what newsgroups you are posting to. Delete
(do you know how to use your delete key?) all the newsgroups except
rec.radio.amateur.misc. then the antenna newsgroup and the equipment
newsgroup etc. will not be seeing the posts which are IRRELEVANT.
So if you like this bullshit bickering stuff go on over to
rec.radio.amateur.misc and you will see there are lots and lots of
them to entertain you all night long. You can call all of the posters
there names to your hearts content.

4368. Why - Elevate the Antenna Element 3-5 Feet Above the Roof ?

Newsgroup: rec.radio.shortwave
Date: 2006-05-11 19:29:32 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1147375771.985033.70420@i39g2000cwa.googlegroups.com>
Source record: 73725

CraigM,

Why - Elevate the Antenna Element 3-5 Feet Above the Roof ?
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9443

Just basic practical experience on my part and
what I have read and been told over the years.

FWIW - Elevating the Antenna Element 3-5 Feet 'above' the
Roof may not always work in providing a Stronger Signal and
Less Noise in all situations - but often it does.

In general this statement applies to any Antenna Element
around a House or Building or their Roof Line and Attic.

Where 'possible' get the Antenna Element :
* Off-the-Surface
* Away-from-the-Surface
* Out-and-Up-in-the-Air
A few Feet of Space {Distance} Does Matter

The Why - It just may result from the simple fact that as
the Distance {Space} from a Source-of-Noise Increases
the Signal Level of the Noise Decreases.

So 'if' there is some Wiring or Equipment (Source-of-Noise)
in the Attic Area : The Surface of the Roof would be closer
and the Noise Stronger then if it were detected another 3-5
Feet away (Up Higher in the Air).

Note - This 'assumes' a non-metal Roof Surface that may act
as a Shield for any Noise emanating from the Attic of House.

It goes without saying that 'if' there is Electrical Equipment
on the Roof like Swamp-Coolers or Air-Conditioners then it
is always a good idea (were practical) to place the Antenna
Element away from such potential Sources-of-Noise.

In Conclusion - It remains my recommendation that "Elevating"
the Antenna Element 3-5 Feet 'above' the Surface of the Roof
is the better place for it to be for a Cleaner RF Signal and
Reduced Noise from the interior of the House.

as always - iane ~ RHF

Dear "Telamon,"

I hear this "note-flattening" on music fairly frequently when listening to music via a station whose signal is variable in strength (when listening on my Satellit 800 with AGC set to "slow," sync circuit "on,." using 6.0 kHz [nominal] filter or the 4.0 kHz one, and the station's frequency set to "spot-on"). Obviously, I cannot tell others when they will hear this effect but it is very noticeable here on the east coast when the VOR (whose signal varies in strength) is playing their interval signal. Try listening to that. On the Satellit 800 (and the two Drake radios I heard - R8B and SW8), a sustained note will appear to change frequency, "flattening" momentarilyand then returning to its proper frequency. This happens often.

It never happens with my AOR AR7030 Plus receiver.

Best,

Joe

"Telamon" < telamon_spamshi...@pacbell.net.is.invalid > wrote:

I don't have perfect pitch so I guess I have not heard the effect you noted. I'm trying to understand your example so I can hear it. Are you saying that on the voice of Russia Interval signal itself one of the notes is flat and only the one note? If that is the case is that a high or low note? I'll have to listen to both radios to see if I can hear the
difference. Even though I don't have the perfect pitch ability I should be able to hear this as a difference between the radios but if you have more information maybe I can't hear the effect.

Both radios have selectable filters and passband tuning that shape the sound. Usually I don't hear any tonal effects due to the sync but I can easily hear tonal differences due to:
1. Tuning the VCO from right on to slightly off frequency.
2. Filter selection.
3. Passband tuning.
4. Audio tone controls.
5. Notch filter.

Generally how the audio sounds is mostly affected by the filter and passband tuning, which I fiddle with to get the best high frequency response depending on conditions. I guess I would be surprised that a change in the audio would result from using the sync on the Drake and that something else is causing it like the filter response not being flat on the Drake or the way the operator controls are adjusted.

Maybe something I can listen to that is more repetitive like the tones
on WWV. Do you hear a difference there?

Most any building materials have a dielectric constant higher than air
(1) and tend to bend the electric field lines around the house. The
field lines generated inside penetrating the outside tend to head toward
earth.

Well a couple of things come into play.

Local noise goes up, along with atmospheric, and loops tend to have
greater local noise rejection over a voltage type. This is especially
true for a shielded loop. There is no loop advantage in atmospheric
noise save for lightening storm noise so it might make a better summer
antenna.

The lower in frequency you go the signals tend to be directionally phase
stable and so with a loop receive pattern you can null signals.

The higher in frequency you go the less advantage there is in a loop
over a dipole but it will work just fine.

I think paralleling diodes to get more capacitance than what one diode
can provide will work. Can't think of a reason why it would not work.

Thanks for the audio note distortion description. I'll listen for it
and see if I can hear it. Must be the sync is drifting off center
carrier due to the tone created by the musical note looking like
another carrier to lock too during a selective fade. The difference
between the radios audio response could then be due to the PLL lock
time where the Drake drifts faster then the 7030 causing the change in
tone.

Dear "HFguy,"

You know, when I made that comment about perfect pitch I wondered, just for a second, if anyone would bring up the difference between "absolute" and "relative" perfect pitch but I figured that, in this context, it didn't really matter. Obviously though you have made the question. So to answer you: yes, like most who have "perfect pitch," mine is "relative."

I don't know if that is a "requirement" for hearing the "note-flattening" (frequency or pitch-changing) effect that the Drake synchronous circuit inserts into musical notes being transmitted (as it attempts to maintain lock) over a variable-strength signal being received (I believe that most people could hear it), but it is sometimes an annoyance to me and, according to Drake, it is inherent in their circuit. Obviously the technology does exist to eliminate that problem.

But let me make this statement: there is no such thing as a "perfect" radio or "perfect" circuits. Drake's synchronous circuit is extremely well-designed and performs in a manner that would please just about everyone, certainly including me. (I've owned my Grundig Satellit 800 for six years now and am VERY pleased with it.) I just think that, in overall performance, AOR's synchronous detection circuit is somewhat better.

Regarding the AOR AR7030 Plus: its so-called ergonomic "shortcomings" have been blown WAY out of proportion. How often do we actually make changes in operating parameters? Face it, we tune in a station, adjust the passband (if necessary), adjust the filter (if necessary), engage the notch filter (if necessary), and then we sit back and listen. (At least that's what I do!) You can do all that on the AOR with just one button push (and twirling one knob) for all of those functions (except the notch filter which hunts out and "zaps" the offending heterodyne automatically! - you don't need to use a knob). You can do much of that from your easy chair across the room, if you like, with the remote control, or, if you prefer (as I do), you can control practically the whole shebang via your computer using one of several computer-control programs (I use RxWings - its free and its fantastic!). Just about the only people who could not use an AR7030 Plus are those whose VCRs permanently blink "12:00."

Its a pity that reviews were quick to damn something new and revolutionary like the AR7030 Plus and its operation. Many people (including myself - for years!) were heavily influenced by these reviews and therefore were reluctant to try this radio.

I am VERY glad that I overcame my fears and bought the set. You may well stick to your views and you are welcome to them (and I respect them) about "buttons," "controls," etc.(and, to tell the truth, I like them too - they really look great and they impress the heck out of your friends and relatives - "you REALLY know how to use that?!?"), but take my word for it: you CANNOT get performance equal to that of the AOR AR7030 Plus without spending twice (or more) its price (antennas and all other things being equal). Check out the tables in PASSPORT 2006 and you'll see what I mean. And also note that this radio, now in its eleventh year of production, is still one of PASSPORT's top receivers. Not only that, but ANY AR7030 can be converted (for a price, of course) to the latest specifications, hardware, and features by the factory. (In other words, your 1996 set can be brought up to 2006 standards.) This is excellent engineering. (For example, you cannot convert a JRC NRD-535D to a JRC NRD545, or a Drake R8A to an R8B.)

And if an old "luddite" like myself can learn to operate this radio (it took me all of thirty minutes), anyone can! Believe me, it really is EASY to use and is the best shortwave radio I persoanlly have ever heard or owned in almost fifty years of shortwave listening.

Best,

Joe

P.S. I don't know how to record a SW signal to computer. Try listening to the interval signal of the Voice of Russia (if its signal-strength is variable at your location as it is at mine). You will hear some of the sustained notes go momentarily flat (change pitch) when listening to it on a Drake radio or Grundig Satelit 800 (and possibly the new Eton E1 if that radio also uses the same Drake sync circuit - it may not) and then the note will "recover." Turn off the Drake sync circuit and this effect does not happen. The notes stay on pitch..

P.P.S. As all of us Sony ICF7600GR owners know, Sony's sync circuit injects a horrible"whistle" when it's trying to maintain lock on a weak or rapidly-fading in and out signal. But, then, the ICFSW7600GR costs only (at MOST) $150.00 and NO other currently-manufactured small portable SW radio offers any sync circuit at all. Don't like that effect? Turn the sync off! At least, with this radio, you can have the circuit on when you want it (which is most of the time). And, as with ALL radios that feature a well-designed sync circuit, audio quality is improved (distortion is lowered) when the circuit is on.

"HFguy" < h...@connifer.net > wrote:

... Are you sure you mean perfect (absolute) pitch? That's when you know the
musical letter assigned to any note you hear without a reference note. It's quite rare. I have relative pitch. I can hear a very slight change in the pitch of a tone. I also know when I'm hearing a song in it's original key. For example, I can whistle a popular song in it's original

key but I couldn't tell you the actual letter of that key. That's why it's called 'relative'.

... I don't think I could live with the ergonomics of the '7030'. I know I
couldn't live with the menu carousel on the original R8. I hate going through menus to change a setting. I want buttons. The more the merrier.
I can change the most commonly used functions on my R8B in the dark.

leave the Bell and Howell, whose designers felt the circuitry was superb as
it was and opted not to inundate their users with meaningless knob twiddling? I think you know the answer to that as well as I do....

Yes, Jim, I do. (I pity those who are not familiar with this radio.) You understand that I was writing about "ordinary" "mediocre" shortwave sets (such as the AOR AR7030 Plus, the Drake R8B, the Grundig Satellit 800, and one could also include the Ten-tec RX-340, the Watkins-Johnson WJ-8711A, and/or any Racal, Collins, or Hammarlund model you care to mention). These radios are obviously NOT in the same class as the Bell + Howell Radio ("Tune into the world from home. And tune into home from faraway ... with this portable nine-band world receiver from Bell + Howell. ... Expand your listening options with ... AM/megawatt and shortwave channels.") (Jim, do ANY of your large collection of radios, with the exception of your Bell + Howell, pick up AM/megawatt channels?)

Those radios mentioned above, all of which are more expensive than the Bell + Howell, need "special circuitry" - variable IF filters, sync detectors, adjustable AGC controls, etc., etc., etc. to achieve what the Bell + Howell does with its MINIMALIST circuitry (and it's so EFFICIENT that it needs only two AA batteries - not included - to operate!).

And the Bell + Howell even picks up TV sound!

Who needs sync circuits anyway?

Best,

Joe

The school yard is often lively with youngsters demonstrating their
capability of spewing out newly learned potty words that they
envision makes them more of a man.
However when they do mature they usually realize that kind of language
really only makes them appear child like. Some never do get it.

Regards
Gary

Not only do they market Chinese-made junk under the, "Grundig", name, as once was German made, but take advantage of consumers - no wonder their radios are just about aesthetics:

RW Special Report
by James Careless
01.02.04

In general, Grundig products didn't sell in North America. They cost more than the competition's, without offering consumers clear reasons for paying extra. As a result, by 1990, Hozour decided to stop carrying Grundig video products and "instead concentrated 100 percent on our shortwave radios."

Why? It's a good question; by the mid-1980s, shortwave radio was viewed as a dying medium. It was the province of DXers - people who hunt for distant broadcasts, DX being an old Morse Code term for distant station reception - and other fringe hobbyists, not the general public. Small wonder that Zenith had exited the market and that Panasonic eventually pulled out in 1997.

More important for Lextronix/Eton, shortwave radios offered fatter margins than most consumer electronics. The reason is mystique; consumers don't understand how shortwave radio works. As a result, they're willing to pay more for it.

"The margins in SW are incredible," Magne said. "Technology that you could charge $20-30 for in an AM/FM radio can easily be priced at $100-$200 in a shortwave radio, and people will happily pay for it."

Of course, margins alone are useless, if nobody buys your product. To make these margins matter, you've got to manufacture and sell in volume, a fact Esmail Hozour soon grasped.

Plans

With a solid grasp on the Grundig name and the North American market, Europe could be next on Eton's list. After all, "If our formula works so successfully in North America, which is the most competitive market in the world, it should work in Europe," Hozour said.

Time will tell if Eton will tackle Europe on its own or under the Grundig banner. Hozour isn't revealing his plans. However, the fact that his new Grundig S350 receiver box is labeled as being made by "Eton Corp./Grundig" may give some clue to Hozour's branding intentions.

If I might add my two cents' worth - I think this "note-flattening" is
what I hear when I tune in a musical note, or any continuous tone, on
USB or LSB, then de-tune. The further away I get from the proper
frequency, the flatter or sharper the note gets. This can make music
sound really silly. But I don't have a sync circuit on my NRD-525, so I
can't comment on that function.

BTW, guitar players define PERFECT PITCH as when you throw an accordion
out a second story window and hit a banjo player in the head!

There are available diodes that can provide swings of more than 300 pF.

What is important, if you want tuning range, is the ratio of maximum capacitance to minimum capacitance. Paralleling many identical diodes will not change the ratio. Selecting the appropriate diode is better.

Are you saying the wood, fiberglass and shingles have enough effect to make three or five foot separation sufficient to reduce the field from noise generated inside a house?

Why then would anyone have trouble with noise radiated from their neighbor's house?

Perhaps I could throw my two cents into the discussion. Qualify them by saying I have no experience with any of the radios mentioned. What I have experimented with is add-on synch AM detectors (both homebrew hardware synch AM and software DSP with a 455kHz/15kHz downconverter) and Radio Shack DX-394A and DX-394B radios as tuners (OK, OK, don't tune out just yet!). With deep, rapidly fading signals, both detectors would warble, wow, groan when fed by the 394A. Changing the RF Gain control setting on a stable signal had a similar effect.

Some time later, I found that the detectors did not warble, wow or groan with the DX-394B. The difference turned out to be that the B has a buffer between the 2nd local oscillator and the 2nd mixer whereas the A does not. This isolates the oscillator from variable loading caused by changing the gain of the 2nd mixer. The 2nd mixer is on the AGC line so varying signal strength affects its gain/loading and the AGC voltage is also affected by the RF Gain control. I added a buffer to the A and now it's as stable as the B.

Maybe there is something similar happening to a slight extent with those radios on which you hear slight pitch changes. Rather than a warping upstream oscillator with gross effects as in my case, maybe the PLL oscillator in your higher class radios is being pulled by changes in the strength of the input signal. You mention that it is most noticeable when

you use slow AGC - that would cause the most extreme and prolonged variation of signal strength at the input of the detector. Why not use fast AGC? That seems to be the norm for AM reception. Do you use slow or fast AGC on the AOR7030?

RHF,
Actually you do not "have to post a political rebutal" - you choose to
do so. Besides, if there is no rebutal then the post is not balanced
and that says something in and of itself. I know it's hard to not
refute things that are very contrary to your beliefs, however it might
serve to keep your blood pressure stable.

I don't see how this is any more efficient (indeed, it appears to be
less efficient) than CW-Morse code. My understanding is that Morse
wisely used the least complicated sequences for the most commonly used
letters. I think this is also true of PSK31, but I could be wrong.

Consider the letter "E": a single "dit" in Morse, but it becomes
one "tap" followed by 5 "taps" in the above scheme. None too efficient,
it seems to me.

4415. For Those in Search of . . . a VC-20 UHF Converter or new Kenwood R-5000 Receiver

It's no wonder that my $25 RS digital PLL AM/FM and car radios performed just like the S350. Looks like we've all been scammed - the S350 is basically a glorified,
over-hyped, over-priced AM/FM radio, that doesn't even have the state-of-the-art electonics, as my $25 radio. That's why, as soon as I opened up the S350, I knew it was a ripoff - cheap plastic with cheap electronics. Even the circuit borads on my RS radio were shielded and the electonics were reinforced with apoxy - no such thing with the S350, just bare electronics. I guess the RS PLL and memory integrated circuitry need extra shielding.

> to make three or five foot separation sufficient to reduce the field
> from noise generated inside a house?

It is not a reduction as much as additional bending (refraction) of the
field lines to follow the contour of the house to earth so the field
strength falls off faster than it otherwise would without the
difference in dielectric constant between the building materials and
air.

There is always some dielectric heating loss to add to that but at 1 to
30 MHz it would be very small.

If noise from your neighbors house is bothering you there is a good
chance it is diminished when it rains if the noise is radiating
directly from the neighbors house because the building material
dielectric constant would be much higher than when it is dry.

> Why then would anyone have trouble with noise radiated from their
> neighbor's house?

Usually because the radiated noise induces currents in other nearby conductors around like gutters, utility lines that then re-radiate the noise.

Some of the noise is EMI through common AC mains connections.

Some of the noise generation is also RFI (far field) to begin with instead of just near field energy.

> will not change the ratio. Selecting the appropriate diode is better.

The capacitance range may not be as great with the ganged diodes
depending on the diode specifications but it certainly is easier to use
one diode that has the need range.

One diode is 40 to 400 pF or four in parallel of 10 to 100 pF each
should work out to the same range. I just made up the numbers as an
example. In reality you could be correct because diodes in my example
may not exist. We were speaking in generality and not specifically.

CragM,

Maybe it's just me -but-
"IF" - I were to put a Loop Antenna on my Roof
most likely I would have it at least Five Feet (5')
above the Surface of the Roof. Plus I would go
into the Attic and place Aluminum Foil on the
Under-Side of the Roof for a distance of Five
Feet or more in all directions from the Loop and
may be even run a good earthen Ground Wire
up to the Aluminum Foil. If it knocked-out 10%
of the Noise coming from my own House it would
be 10% to the good - and that ain't bad.

higher in the air is always better - unless... iane ~ RHF

4428. It's A noisy, Noisy. NOISY ! - World We Live In . . .

Newsgroup: rec.radio.shortwave
Date: 2006-05-12 08:46:57 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1147423617.201667.125060@i40g2000cwc.googlegroups.com>
Source record: 73585

For One and All,

It's A noisy, Noisy. NOISY ! - World We Live In . . .
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9452

The Modern Urban and Suburban RFI / EMF Noise Environment
That We Live-In "IS" An Electrical Energy Dumping Ground [.]

First - Think about your House {Home} as being Zone # 1
a Ten (10) Yard (Ten Meter) Circle and the Primary Noise
Generating Source that impacts your ability to Listen to
Shortwave Radio and any other type of Radio Listening.
* * * * * The RFI / EMF "Noise" Ground Zero * * * * *
Within the House are many small individual Point-Sources
of RFI or large size Generators of EMF "NOISE" from the
PLL Circuitry in your Radio; a Computer or Cable Modem;
to the Moter / Compressor in the Refrigerator or Air-Conditioner.

FIXING IT ONE-BY-ONE :
You may have gone about the House and Identified
a few or all of these Noise Sources and you may
have in-fact eliminated a few or all of them to the
point that your Radio Listening has improved greatly.

Zone # 2 - Twenty (20) Yard (Twenty Meter) Circle
Your Next-Door-Neighbors - Here are those two to five
Houses within the Circle that just like yours are each
Generators of Noise. But since they are twice the
distance away the Noise generated by each is One
Fourth (1/4) that of your own Home - But that can
still add-up to (2X * 1/4 = 1/2 or 5X * 1/4 = 1+1/4)
the level of near by Noise relative to your own Home.

Zone # 3 - Forty (40) Yard (Forty Meter) Circle
Your Nearby-Neighbors - Here are those five to
twelve Houses within the Circle that just like yours
are each Generators of Noise. But since they
are four times the distance away and the Noise
generated by each is One Sixteenth (1/16) that
of your own Home - But that can still add-up to
(5X * 1/16 = 1/3 or 12X * 1/16 = 3/4) the level of
nearby Noise relative to your own Home.

Zone # 4 - Eighty (80) Yard (Eighty Meter) Circle
Your Local-Neighbors - Here are those 16 to 32
Houses surrounding your Home within the Circle

that again just like yours are each Generators
of Noise. But since they are eight times the
distance away the Noise generated by each is
One Sixty-Fourth (1/64) that of your own Home
- But that can still add-up to (16X * 1/64 = 1/4
or 32X * 1/64 = 1/2) the level of nearby Noise
relative to your own Home.

BEYIND THE ZONES - THE LOCAL AREA
The Quarter-of-a-Mile "Local Area" Neighborhood :
Within your Neighborhood or development out to
a distance of 440 Yards (400 Meters) which is
a Quarter-of-a-Mile centered around your Home
How Many ? Count Them How Many Homes are
There There ? And Think About It ! - Each One
is a Point-Source for Noise in your "Local Area"
that can and often does impact on your ability to
Listen to the Radio.

Noise It's Everywhere ! - Can You Hear It ?
{ And Will It Ever Stop ? }

it's a noisy, Noisy. NOISY ! - world we live in... iane ~ RHF

Joe this thread is becoming a bit tedious and you are being a bit dogmatic.
No one disputes the fact that the AOR 7030+ is one of the finest DX radio's
ever made, but the Drake R8B is a very fine radio as well.
And you are right, my VCR is defaulted on 00.00 - is that a crime? I happen
to love the simplicity of operation and general excellence of the Drake R8B.
See my review of the Drake side by side with the 7030 at
http://www.dxing.info/equipment/aor_ar7030_drake_r8a_plimmer.dx

I owned the R8B for many years and extensively listened to music
orchestral's from the BBC and music from other stations, and I never
experienced any of the problems you are having with your Sat 800 on the R8B.
I only experienced the fullest audio spectrum for the Drake with unshakeable
signals where the Drake's sync detector locked on like a bulldog on a bone.

On the various occasions I had an extended loan of a 7030+ and it was side
by side with my Drake I never found the 7030+ to be better. They were the
same, but the Drake sync had the edge on various occasions due to it being
side band selectable.

I think you are wrong in assuming that the faults you find in your Sat 800
are experienced by Drake R8B owners.

4434. Company Voice Freq's For Commercial Aviation ?

Newsgroup: rec.radio.shortwave

Hi,

Anyone have a reasonably up to date freq listing for commercial aviation,
company frequencies, voice ?

I can't seem to locate a decent one on the web that isn't nearly totally out
of date.

Or are aviation company frequencies totally digital or acars now a days ?
Voice used at all anymore ?

BTW: is it that they all now use Arinc ?

Is Arinc voice or totally digital now ?

Thanks,
B.

All antennas sense a difference of potential between energy in a field
and a mass not part of said field.

Is it really ... "him" ... ? Nahhhh .. can't be.

Everybody knows that The Great Liberty Net gets kicked all over 75 meters now and they only have about 2 check ins besides the net controller.

Hey if you're getting back into radio, Hamvention is next weekend. The old thun dar berd will be taking the year off from Dayton this year. Gonna catch a ride with some others. And we gotta swing through Nashville and pick up another rider, if you get my drift.

I had a PRO-2004 and 2006 years ago. Now I'm using a BC780XLT as my base scanner. I can't really call this one "plastic" as it has a metal case. The front plate is plastic, does that count?

4442. AC Power line noise

Newsgroup: rec.radio.shortwave
Date: 2006-05-12 15:14:31 UTC
From: r2000swler@hotmail.com
Message-ID: <1147446871.528149.69310@i40g2000cwc.googlegroups.com>
Source record: 73649

Since T-storm seanon is here, and I have ripped my radio room to
shreds, I am
reduced to operating from a portable for a few weeks while we rebuild,
and rewire
the room.

In between the recent storms I noticed a new RFI source. A reoccuring
crackle.
While we found the source, fuse on the input to the power transformer
of the house
next door, I decided to do some additional research on power line
noise.

I found a gold mine worth of data on the ARRL page.
For those facing power line QRM a little study
could be a big help in resolving the problems.

<http://www.arrl.org/tis/info/powerline-FAQ.html>

Two sections were very informative:

<http://www.arrl.org/tis/info/HTML/power_line_handbook/>
This shows the "correct" way to do a line noise RF hunt.
Even though I can't afford the tools, it does show the "how".

And since I can't afford that...

<http://www.arrl.org/tis/info/pdf/099252.pdf>

I had been thinking of designing something similar, but why re-invent
the wheel. I built one using a Radio Shack Pro16 scanner and tested
it around or sub-division. The RECC people are going to get real tired
of me. I have already found several very noisy "poles".

Again please feel free to enjoy or ignore.

Terry

So what is an antenna that is split in the middle with half of it
grounded? What is an antenna that is balanced all the way into the
radio, like on the real input to an R-390A?

I think ''balanced'' and ''unbalanced'' and ''loop'' are the basic
kinds of antennas and that mono and di pole are sloppy terms.

Dan Brown DID NOT write The Da Vinci Code! [VICTORY for Christians !]

He is a fraud!

As seen on "Plan Odelia" The Search for King Solomon's Chess Service

Here is the post verbatim!

"Christians should take "legal means"
against "The Da Vinci Code".
- Cardinal Francis Arinze

THEREFORE...

The Jesuits

Versus

The Da Vinci Code

In addition to looking for The Chess Service of King Solomon,
this secret sect of The Jesuit Order, protect The Christian Faith
from those that would threaten the belief of members of The Church.
Upon the publication of "The Da Vinci Code", The Order went
to work to investigate The Truth using a closely guarded
secret:

ACCESS TO THE KINGDOM OF HEAVEN VIA PRAYER TO GOD.

Brother Grezegorz or "The Hidden Disciple",
works in the background or "is not known by anyone".

Whenever he "appears", matters are grave.

Upon investigating The Truth behind the book,
The Da Vinci Code, by Dan Brown; he called
an emergency meeting with the highest ranking
of this secret order.

The following are the minutes of their meeting...

Brother Grezegorz: Let me start by handing
out the following I typed, before our meeting begins:

Brother Iulian, you are to have the younger brothers put it on that
website you wrote

me about.

The Following is The Truth
Using my "prayer" to GOD.
(1) Jesus Christ existed, as stated in the bible.

(2) Mary Magdalene existed, as stated in the bible.

(3) Jesus Christ "saved" Mary Magdalene from a bad life, by explaining
The Truth to

her.

(4) Jesus Christ DID NOT marry or have any children with Mary
Magdalene.

(5) DAN BROWN "MADE A DEAL WITH THE DEVIL: HA-SATAN"; THAT IS: [SOLD
HIS

SOUL FOR WORTHLESS PAPER MONEY],- TO LIE TO THE WORLD THROUGH THE

BOOK: "THE DA VINCI CODE" - TO ATTACK THE MINDS OF GOOD CHRISTIANS AND

DESTROY THEIR FAITH IN JESUS CHRIST!

(6) Judas Iscariot was a traitor, NOT A HERO - Judas' past is tied to
this present AND

the liar, Dan Brown (see below).

PROOF: How to verify our claims
Every Catholic is to verify this information, using the method of
prayer as stated here:

(i) They are to ask GOD, through Jesus Christ, FOR THE TRUTH on these
matters.

(ii) GOD will then answer that prayer, that night, IN A DREAM.

Brother Grezegorz: Our enemies are on the move again.

Brother Tancredo: As always brother, what else is new?
All I know, whenever you "appear", matters are grave!

Brother Haineau: Brother Grezegorz, what is the
reason for this secret meeting?

Brother Grezegorz: THE WILL demands Catholics recognize The Truth
of "Where is The Kingdom of Heaven".

Murmurs...

Brother Khrystiyanr: This must be serious!

Brother Grezegorz: VERY: Understand, Dan Brown DID NOT write The Da
Vinci Code!
It was written by a very evil witch. This is why THE WILL demands
Catholics
recognize The Truth by utilizing The Kingdom of Heaven! They are to ASK
GOD
for The Truth and they will then RECEIVE The Truth, in the form of a
Dream
that night.

Brother Iulian: A witch? I knew it! Continue please!

Brother Grezegorz: THE WILL demands, that Catholics have Faith by
believing
The Truth shown to them, in their dreams and rejoice according to The
Truth
they have understood.

Brother Haineau: Brother Iulian, has arranged for the website, we
should
see the results of our message by watching from The Kingdom of Heaven.

Brother Grezegorz: Good. All the website needs, is this prayer,
so Catholics can verify any and all Truth!

Here it is:

TO CHECK FOR TRUTH IN ANY MATTER, SAY THE FOLLOWING PRAYER:

"FATHER, I ASK YOU FOR THE TRUTH: [INSERT SUBJECT HERE]
I ASK YOU THIS, IN THE NAME OF JESUS CHRIST. AMEN".

Example REQUEST FOR THE TRUTH # 1:

"FATHER, I ASK YOU FOR THE TRUTH:
[DID DAN BROWN WRITE THE DA VINCI CODE ?]
I ASK YOU THIS, IN THE NAME OF JESUS CHRIST. AMEN".

You then go to sleep and GOD will reply in the form of a dream that
night.

Example REQUEST FOR THE TRUTH # 2:

"FATHER, I ASK YOU FOR THE TRUTH:
[HOW IS JUDAS ISCARIOT CONNECTED TO DAN BROWN ?]
I ASK YOU THIS, IN THE NAME OF JESUS CHRIST. AMEN".

You then go to sleep and GOD will reply in the form of a dream that
night.

Example REQUEST FOR THE TRUTH # 3: A Christian's Objective:

THE WILL Demands a Christian choose to ASK;
TO MEET Jesus Christ Himself in The
Kingdom of Heaven, to put ALL THESE LIES to rest!

LIKE SO:

"FATHER, I ASK THAT I MEET JESUS CHRIST IN THE KINGDOM OF HEAVEN.
I ASK YOU THIS, IN THE NAME OF JESUS CHRIST. AMEN".

You then go to sleep and GOD WILL SEND JESUS CHRIST TO MEET YOU in a
dream

that night.

When you wake up, you will then be glad.

WHAT WILL HAPPEN...

Brother Grezegorz: We will use The Kingdom of Heaven to bring Dan Brown
(his spirit

/ MIND), his publisher,
and every evil witch that helped support him to TRAIL by THE WILL!

Brother Haineau: At last, the world will witness THE POWER of The Truth
and those

that have faith in Him!

Brother Khrystiyanr: Will the Arch-Angels be present for this trial?

Brother Grezegorz: From my understanding, we are told to "KEEP WATCH -
from The

Kingdom of Heaven"
for the following Arch-Angels:

The Arch-Angel METATRON ; The Arch-Angel MICHAEL ; The Arch-Angel RAPHAEL,

and The Arch-Angel URIEL!

Brother Haineau: What About Gabriel?

Brother Grezegorz: THE MAN Gabriel gave me this dictation - VERBATIM!

Brother Tancredo: This will then help Christians understand "The Mechanics of

Heaven and Earth"!

Brother Tancredo: I will file our Brotherhood's personal report to Pope Benedict XVI.
Let us all await for the positive response from the papal's office!

Brother Iulian: Please go on, Brother Grezegorz!

Brother Grezegorz: THE WILL has allowed this nonsense to persist FOR EVERY

CHRISTIAN TO STUDY
HOW A LIE LIKE "THE DA VINCI CODE" IS BROUGHT INTO THE WORLD - THEY ARE

NOW TO
USE THE KINGDOM OF HEAVEN TO STOP SUCH NONSENSE BEFORE IF MANIFESTS

ON EARTH!

FOR THIS TRAIL: This is what Christians DEMAND be done - IMMEDIATELY (On or

before: MAY 19, 2006)!

(1) THE IMMEDIATE CEASE AND DESIST OF THE PUBLICATION OF "A LIE" KNOWN

AS "THE DA VINCI CODE".

(2) THE IMMEDIATE CANCELLATION OF THE FILM "THE DA VINCI CODE" - NOW

THAT THE WORLD HAS
UNDERSTOOD THE TRUTH: DAN BROWN IS A FRAUDULENT MAN!

(3) A PUBLIC APOLOGY TO ALL CHRISTIANS IN ALL MAJOR NEWSPAPERS & TV: THAT

IS "Ads" BY Dan Brown
& his publisher FOR PUTTING ALL CHRISTIANS THROUGH MUCH: "MENTAL

DISTRESS ; GRIEF ; AND PAIN"
THAT COMES BY AS A RESULT OF THE PUBLICATION OF "A LIE" KNOWN AS "THE DA

VINCI CODE" AND
THE SUPPORT OF "A FOOLISH LIAR" KNOWN AS DAN BROWN.

THE WILL demands Catholics and Christians do their "Due Diligence" for this trial!

Christians are to become HUMAN LIE DETECTORS!

They are to let NO LIE pass into their minds by
ASKING GOD for The Truth ON ANY MATTER AT ANY TIME!
THEN PAY ATTENTION TO THEIR DREAMS.

He will REPLY in the form of a Dream that night!

To gain insight, Christians are to proceed as follows: All Christians are to ASK GOD for

The Truth,
in The Name of Jesus Christ, on the following matters! They are then to "fall asleep"
to get an answer in the form of a dream! They are to do this to understand who in the
world "are not with us"!

Brother Grezegorz: It is important that Christians understand The Truth:
NOT EVERYONE IN PHYSICAL BODIES ARE HUMAN! This is the secret understanding
behind the saying: "Wolves in Sheep's Clothing"!
Where:
"Wolf" = "Evil spirit inside physical body";
"Sheep's Clothing" = "Human appearing physical body".
Further, here are prayer suggestions to ASK GOD FOR THE TRUTH, of what certain demons appear like in flesh, so you can know how to deal with them in future!

(1)

"FATHER, I ASK YOU FOR THE TRUTH:
[WHAT DOES THE PHYSICAL APPEARANCE OF THE DEMON KNOWN AS "HA-SATAN"

LOOK LIKE ?]
I ASK YOU THIS, IN THE NAME OF JESUS CHRIST. AMEN".

You then go to sleep and GOD will reply in the form of a dream that night.

---

(2)

"FATHER, I ASK YOU FOR THE TRUTH:
[WHAT DOES THE PHYSICAL APPEARANCE OF THE DEMON KNOWN AS "RACISM"

LOOK LIKE ?]
I ASK YOU THIS, IN THE NAME OF JESUS CHRIST. AMEN".

You then go to sleep and GOD will reply in the form of a dream that night.

IT IS VERY IMPORTANT FOR ALL CHRISTIANS TO KNOW WHAT THE DEMON

"MURDER", LOOKS LIKE IN FLESH!

---

(3)

"FATHER, I ASK YOU FOR THE TRUTH:
[WHAT DOES THE PHYSICAL APPEARANCE OF THE DEMON KNOWN AS "HYDRA"

LOOK LIKE ?]
I ASK YOU THIS, IN THE NAME OF JESUS CHRIST. AMEN".

You then go to sleep and GOD will reply in the form of a dream that night.

---

(4)

"FATHER, I ASK YOU FOR THE TRUTH:
[WHAT DOES THE PHYSICAL APPEARANCE OF THE DEMON KNOWN AS

"BEELZEBOUL" LOOK LIKE ?]
I ASK YOU THIS, IN THE NAME OF JESUS CHRIST. AMEN".

You then go to sleep and GOD will reply in the form of a dream that night.

---

(5)

"FATHER, I ASK YOU FOR THE TRUTH:
[WHAT DOES THE PHYSICAL APPEARANCE OF THE DEMON KNOWN AS

"WICKEDNESS" LOOK LIKE ?]
I ASK YOU THIS, IN THE NAME OF JESUS CHRIST. AMEN".

You then go to sleep and GOD will reply in the form of a dream that night.

---

(6)

"FATHER, I ASK YOU FOR THE TRUTH:
[WHAT DOES THE PHYSICAL APPEARANCE OF THE DEMON KNOWN AS "MURDER"

LOOK LIKE ?]
I ASK YOU THIS, IN THE NAME OF JESUS CHRIST. AMEN".

You then go to sleep and GOD will reply in the form of a dream that
night.

IT IS IMPORTANT FOR ALL CHRISTIANS TO KNOW WHAT THE DEMON "MURDER",

LOOKS LIKE IN FLESH!

---

(7)

"FATHER, I ASK YOU FOR THE TRUTH:
[WHAT DOES THE PHYSICAL APPEARANCE OF THE DEMON KNOWN AS "ANUBIS"

LOOK LIKE ?]
I ASK YOU THIS, IN THE NAME OF JESUS CHRIST. AMEN".

You then go to sleep and GOD will reply in the form of a dream that
night.

---

(8)

"FATHER, I ASK YOU FOR THE TRUTH:
[WHAT DOES THE PHYSICAL APPEARANCE OF THE DEMON KNOWN AS "ASMODEUS"

LOOK LIKE ?]
I ASK YOU THIS, IN THE NAME OF JESUS CHRIST. AMEN".

You then go to sleep and GOD will reply in the form of a dream that
night.

---

(9)

"FATHER, I ASK YOU FOR THE TRUTH:
[WHAT DOES THE PHYSICAL APPEARANCE OF THE DEMON KNOWN AS "ENEPSIGOS"

LOOK LIKE ?]
I ASK YOU THIS, IN THE NAME OF JESUS CHRIST. AMEN".

You then go to sleep and GOD will reply in the form of a dream that
night.

---

(10)

"FATHER, I ASK YOU FOR THE TRUTH:
[WHAT DOES THE PHYSICAL APPEARANCE OF THE DEMON KNOWN AS "BEELZEBUB"

LOOK LIKE ?]
I ASK YOU THIS, IN THE NAME OF JESUS CHRIST. AMEN".

You then go to sleep and GOD will reply in the form of a dream that
night.

---

(11)

"FATHER, I ASK YOU FOR THE TRUTH:
[WHAT DOES THE PHYSICAL APPEARANCE OF THE DEMON KNOWN AS "LUCIFER"

LOOK LIKE ?]
I ASK YOU THIS, IN THE NAME OF JESUS CHRIST. AMEN".

You then go to sleep and GOD will reply in the form of a dream that
night.

The witches you will be shown, help liars in the physical world by
promoting
their work via "Book Clubs" etc!

THE WILL DEMANDS ALL CHRISTIANS ARE TO STANDFAST IN THEIR FAITH IN

JESUS CHRIST!

STRONGLY Recommended Prayer Subjects:

[EVERY CATHOLIC MUST ASK GOD FOR THE TRUTH ON THE FOLLOWING MATTERS

!]
[AND WATCH THEIR DREAMS FOR THE ANSWERS FROM GOD!]

(a)

"FATHER, I ASK YOU FOR THE TRUTH:
[WHO REALLY WROTE "THE DA VINCI CODE" ?]
I ASK YOU THIS, IN THE NAME OF JESUS CHRIST. AMEN".

You then go to sleep and GOD will reply in the form of a dream that
night.

(b)

"FATHER, I ASK YOU FOR THE TRUTH:
[HOW IS THE LIE CALLED "PAPER MONEY" DISTRACTING MY MIND IN THE

KINGDOM OF HEAVEN ?]
I ASK YOU THIS, IN THE NAME OF JESUS CHRIST. AMEN".

You then go to sleep and GOD will reply in the form of a dream that
night.

(c)

"FATHER, I ASK YOU FOR THE TRUTH:
[ARE ANGELS COHABITING WITH HUMAN WOMEN AGAIN ?]
I ASK YOU THIS, IN THE NAME OF JESUS CHRIST. AMEN".

You then go to sleep and GOD will reply in the form of a dream that
night.

(d)

"FATHER, I ASK YOU FOR THE TRUTH:
[ARE ANGELS AND DEMONS PRETENDING TO BE HUMAN AND
LIVING AMONG HUMANS IN THE HUMAN WORLD ?]
I ASK YOU THIS, IN THE NAME OF JESUS CHRIST. AMEN".

You then go to sleep and GOD will reply in the form of a dream that
night.

(e)

"FATHER, I ASK YOU FOR THE TRUTH:
[HOW DO I PROTECT MYSELF FROM ANGELS AND DEMONS PRETENDING
TO BE HUMAN AND LIVING AMONG HUMANS IN THE HUMAN WORLD ?]
I ASK YOU THIS, IN THE NAME OF JESUS CHRIST. AMEN".

You then go to sleep and GOD will reply in the form of a dream that
night.

(f)

"FATHER, I ASK YOU FOR THE TRUTH:
[ARE EVIL WITCHES PLANNING THE THEFT OF THE PHYSICAL BODIES OF HUMAN

WOMEN ?]
I ASK YOU THIS, IN THE NAME OF JESUS CHRIST. AMEN".

You then go to sleep and GOD will reply in the form of a dream that
night.

(g)

"FATHER, I ASK YOU FOR THE TRUTH:
[HOW DO I PROTECT MY MIND FROM THE ACTIVITIES OF EVIL WITCHES ?]
I ASK YOU THIS, IN THE NAME OF JESUS CHRIST. AMEN".

You then go to sleep and GOD will reply in the form of a dream that
night.

(h)

"FATHER, I ASK YOU FOR THE TRUTH:
[IS THE JUDAS GOSPEL AUTHENTIC ?]
I ASK YOU THIS, IN THE NAME OF JESUS CHRIST. AMEN".

You then go to sleep and GOD will reply in the form of a dream that
night.

(i)

"FATHER, I ASK YOU FOR THE TRUTH:
[WHERE IS THE KINGDOM OF HEAVEN ?]
I ASK YOU THIS, IN THE NAME OF JESUS CHRIST. AMEN".

You then go to sleep and GOD will reply in the form of a dream that
night.

(j)

"FATHER, I ASK YOU FOR THE TRUTH:
[WHAT IS THE STATE OF MIND OF THE ARCH-ANGELS ?]
I ASK YOU THIS, IN THE NAME OF JESUS CHRIST. AMEN".

You then go to sleep and GOD will reply in the form of a dream that
night.

(k)

"FATHER, I ASK YOU FOR THE TRUTH:
[WHAT EVIL WITCHES ARE PRETENDING TO BE CHRISTIANS ?]
I ASK YOU THIS, IN THE NAME OF JESUS CHRIST. AMEN".

You then go to sleep and GOD will reply in the form of a dream that
night.

NOTE: For your information, these are the names of The Arch-Angels,
whose minds are being examined by humans at this time:

Michael, Uriel, Raphael, Rathaniel, Raguel, Ramiel,
Saraquael, Sandalphon, and Metatron.

Further, when the name of an Arch-Angel is pronounced
they appear IN THE 4TH Dimension (THE KINGDOM OF HEAVEN).

A person MUST FIRST FALL ASLEEP in the physical world
to then be able to SEE ANGELS in their WORLD -

THAT IS

[The place you go, when you dream: IS THE KINGDOM OF HEAVEN !]

Brother Iulian: I will have them put it up, immediately.

Brother Tancredo: Catholics will be very glad to get this information,
let us make haste!

Brother Grezegorz: Make sure this website remains free! You are to also

give people a chance to download a full copy of this website to their
computer to read the knowledge, "in the form of a movie" that has been
hidden from their eyes!

Brother Iulian: Good idea! I'll see to that myself!

Brother Grezegorz: Good, Men!
As we never allow each other to forget:

THE KINGDOM OF HEAVEN IS WITHIN !!!
Let us go - May God grant us success in Christ!

Brother Tancredo, Brother Haineau, Brother Iulian, & Brother
Khrystiyanr:

AMEN!

So,which companies do you think build the best Aircraft Engines,Aircraft Engines that have never failed,either in the Air or on the Ground?
Heck,I dont know.I dont know which are all of the companies nowdays which build Aircraft Engines.I can think of a few of them though.I guess I could look them up on the internet,but I can't see why I would want to.Mechanical thingys do fail,sometimes,they are not perfect.I think G.E.Aircraft Engines are A OK.
cuhulin
.....
In search of the Perfect Aircraft Engine which has a Lifetime Guarantee,and I love Aircraft,but I dont like to Fly.God would have given me Wings if I was meant to Fly.

Yep. Sounds remarkably like the VHS vs. Beta
wars back in the 80's. "How could you like an
inferior piece of crap like VHS! Beta is SO much
better!"

Seeing the soldering iron there warms the heart.

Do you rotate out some of your equipment from
time to time into the shack? When I last checked,
you had your R7 there.

Nice Shack.I used to own an old floor lamp which dates back to the
1940's or 1950's with a round flourescent bulb and with a big manafying
glass in the middle.I bought it at a Goodwill store years ago and I gave
it to one of my sisters for her sewing room.

Try giving a damn, just once in a
while--rec.music.makers.guitar.acoustic most DEFINITELY does not need
this steaming pile of bullshit.

Look, Ma! No sig!

...bc...

The K7RA Solar Update

SEATTLE, WA, May 12, 2006--This week saw higher geomagnetic activity and lower sunspot numbers than the previous period (our reporting week is Thursday through Wednesday). Average daily sunspot numbers declined more than 5 points to 54.3. Today, May 12, look for active geomagnetic conditions with a planetary A index predicted at 25, then declining to 12 and 10 on Saturday and Sunday. Sunspot numbers and solar flux should be a bit lower than the past week.

Geophysical Institute Prague predicts active geomagnetic conditions for today, May 12, unsettled May 13, quiet to unsettled May 14, nice and quiet May 15-16, back to quiet to unsettled for May 17, and unsettled conditions on May 18.

Many readers alerted us to a new long-range sunspot cycle prediction. This time it wasn't for upcoming Cycle 24, but the peak of Cycle 25, which should reach solar maximum around 2022.

Think that's a long way off? It depends on your perspective, determined by the proportion a given time period represents in comparison with how long you've been around. For instance, when starting out at age 12 as WN7CSK in early 1965, looking ahead 16 years I would be 28, and the year 1981--hard to fathom at the time. The old-timers I knew then, such as Howard S. Pyle, W7OE, first on the air around the same age in 1907, would have laughed out loud at such an assessment.

This spring marked 16 years since I began compiling this weekly bulletin. And 16 years from
now, in mid 2022, I will turn 70, a terrifying notion, because the last 16 years went by so fast. I
suspect the next 16 years to flash by shortly. Even those of us who got into ham radio at a
young age can't expect to see very many solar cycles. Let's hope the soon-to-begin Cycle 24 is
huge, reminiscent of the awesome Cycle 19 of the 1950s.

We saw a prediction in March that the upcoming Cycle 24 could be a big one. Using the same
method of indirectly observing a massive circulating current of solar plasma, a report from NASA
solar physicist David Hathaway shows a stunted-looking Cycle 25. Read about it in an article by
NASA's Tony Phillips.

Roger Barnhill, AB8RX, of Lansing, Michigan asks: "Where can I find up-to-date info on which
way Earth's magnetic field is pointing at any particular time?"

You can find this on the SpaceWeather.com site. Look down the left side under "Interplanetary
Magnetic Field." When Earth's magnetic field is pointing south, Earth is vulnerable to solar wind
and more likely to experience greater geomagnetic activity.

HS0ZFQ tipped us off to a Web page, "The short history of the Smoothed Sunspot Number." It
discusses the various sources for smoothed sunspot numbers needed for propagation
prediction programs using the VOACAP ("Voice of America Coverage Analysis Program")
engine. One example called HamCAP is from VE3NEA, and it's free!

Mike Schaffer, KA3JAW, in Florida, enjoys observing sporadic-E propagation on broadcast
television. On May 11 at 1750 UTC and again at 2215-2230 UTC he observed Canal 2 on TV
channel 2 coming from Nicaragua about 1100 miles away!

For more information concerning propagation and an explanation of the numbers used in this
bulletin see the ARRL Technical Information Service Propagation page. An archive of past
bulletins is on the ARRL Web site.

Sunspot numbers for May 4 through 10 were 50, 61, 69, 64, 53, 56 and 27, with a mean of 54.3.
10.7 cm flux was 91.8, 86.7, 87, 86.2, 84.7, 82.6, and 78.2, with a mean of 85.3. Estimated
planetary A indices were 14, 13, 24, 19, 8, 4 and 4, with a mean of 12.3. Estimated mid-latitude
A indices were 10, 8, 14, 17, 5, 2 and 4, with a mean of 8.6.

I dunno. I think Dan Brown must be a witch because there is no other explanation for such a poorly written book being on the bestseller list forever. I was perplexed but this definitely clears it up.

Hey, that *was* my antenna farm for a while!

Glad they put that series back up -- it was removed for a while
because of overreaction to 9/11... it's not that well-built-out a
facility, there aren't may people there, and its away from things.

For V/UHF, these were the antennas we used:

http://www.dim.com/~efricha/DSES/DSES_tropo_scatter_dish_fully_tipped.jpg
http://www.dim.com/~efricha/DSES/DSES_tropo_scatter_dish_from_lower_POV_2.jpg

For HF and below, I used an abandoned 1000 foot v-sloper pair. quite
effective on VLF -- I could pick up NDBs from Dallas there any time of
day -- or, for that matter, all the 14.1 MHz propogation beacons at
once.

As for the above dishes, well, they're run by a bunch of hams now:

http://www.dses.org/

I used to be on the board of that group. If I can find the time again
I may join back.

Dear John,

No one denies that the Drake R8B is one of the finest shortwave radios ever made. I almost bought one. But, in my opinion, the AR7030 Plus, properly configured, is superior. You disagree with me and I respect your opinion.

But please note: you wrote < I think you are wrong in assuming that the faults you find in your Sat 800 are experienced by Drake R8B owners >

John, regarding the "fault" in the design of the Drake sync circuit, I HEARD the effect on a Drake R8B (and an SW8 as well). And please note that I said this is not a "major" flaw, in my opinion, just a minor annoyance. But it is there, nonetheless.

Best,

Joe.

That's not my reading. Violating the law of hospitality. Where in the
Torah is that law specifically cited?

Homosexual sex is defines as SODOMY in Western Law.

Joe, I wonder if the pitch shifting you hear on the Sat 800 or R8B might be mitigated by using Fast AGC. That would maintain a more constant level to the synch AM detector. Maybe you might hear pitch shifting on the 7030 if you used Slow AGC.

While I agree with you that Fast AGC is advisable while tuning, I don't think it is right to say that Slow AGC is always optimal for listening. I think the choice depends on fading and interference. Rapid deep fading and carrier-less SSB interference are best handled with Fast AGC. Slow AGC provides lowest distortion on AM and SSB and eliminates fatiguing syllabic pumping of background noise and interference on SSB speech. As always, there's a tradeoff, and Medium is a compromise - as you apparently have defaulted to on the 7030.

Of course, I have no idea what your Medium is. I tend to think of these speeds to be on the order of:
Milliseconds Speed
tens Fast
hundreds Medium
thousands Slow

Boy, this Subject needs to be changed...E5 Gloat?

Tom

What's the frequency, Kenneth?

I'm thinking Alex ought to be pretty good tonights so I went to
http://www.infowars.com/listen.html
and tried the frequencies there. I can't hear him. Is he being jammed
by the NSA?

The time now is 10:45 pm. on the East Coast, and I'm hearing a numbers
station at or near 5765 kHz (it seems to be strongest at 5763).

DX-398 off the whip.

Ah yes! The "Great Lick-a-Crotchie Net" as Sid the Lid K5BLB
used to call it! They are still on Sat nites at 10 PM EST but they
could be anyplace from 3.930 to 3.990 as they lost rights to
3.950 some time ago. Tune around and you'll hear Vic's w-i-d-e
signal and dirty amp buckshoting 12kc's either side. Apart from
that it's the same old shi+ they've bee talkin about for years
although many of the old time gasbags from Year's past are
now either dead or dottering around the Rest Home enjoying
their senility. S_S_D_D . . . . . .

(you can still catch BLB and crew on 3.947.5 Sat nights
same ole Sid we love - some things never change, thank glub....

Microdyne 700 series, and other lines like their 1100, 1400 and 2800
series. They were telemetry systems, and they were typically used in
diversity mode so you needed the fast AGC for some applications. They
had matching integration times for attack and release. I should know, I
tested hundreds of the boards on the bench while using a time interval
counter and calculating the reciprocals on the slower ranges. :(

Frg 7, second edition, with the fine tuning knob. They work respectably
well and have more character than the 302. It also scored a bit higher
in the owner reviews below.

302:

http://www.eham.net/reviews/detail/1936

FRG 7:

http://www.eham.net/reviews/detail/979

Well, coming from someone who claims that weekends do NOT contain
Sunday, the credibility of that statement is somewhat strained.

4524. The FRG-7 is really not that great,,, here are the facts

Newsgroup: rec.radio.shortwave
Date: 2006-05-13 05:18:15 UTC
From: mike maghakian <maghakian@comcast.net>
Message-ID: <nNednaWId9-E8fjZnZ2dneKdnZydnZ2d@comcast.com>
Source record: 73632

I thought I would dig up some numbers to back up what I have said for years, the FRG-7 is grossly over rated.
These stats are measured in the lab of the great Ranier Lichte in his awesome book "radio receiver, chance or choice" the best review book ever written in the history of shortwave radio. In fact I just modified one of my copies to make it easy to scan reviews to mail to people for proof of what I say.

FRG-7 FRG-7700 FRG-8800
SW sens (uV) 2.1 2.1 1.1
3rd order ICP (dBm) -25 -10 +3
selectivity (-6/60) 3.2/8.8 *1 3/7 + 7/18

*1 Wide 11/26 Norm 5.2/13.5 Narr 2.6/8.2

In every category of these most important specs, the FRG-7 loses. In fact the 3rd order ICP is pretty BAD !!!!!!

The facts speak for themselves, the reputation of the FRG-7 is not based on reality but fantasy.

I am not crazy about the selectivity of the stock units of any of the FRG's so my FRG-7 and my FRG-7700 both have mechanical filters and the 7700 has an upgraded ceramic as well. But the 7 selectivity is way too limited for the real world !

And the 7700 and 8800 both sound really NICE !!!!

4537. Re: The FRG-7 is really not that great,,, here are the facts

Newsgroup: rec.radio.shortwave
Date: 2006-05-13 08:35:34 UTC
From: Pete KE9OA <p.gianako@comcast.net>
Message-ID: <Q7mdnR7zxrvJB_jZRVn-pw@comcast.com>
Source record: 73645

I have had all three of these receivers.....the 7700 is nothing to write home about, while the 8800 is just ok. Even though the 8800 uses a doubly-balanced diode ring for the 1st mixer, the LW band is awash with MW spurs.
It makes me wonder what method this person used when he made these IP3 measurements. What was the level of each of the tones, and what was the tone spacing? With wide spaced tones, the FRG-7 should be better since preselection would protect the front end a bit.
Another little known fact.....the early versions of the FRG-7 that didn't have the fine tuning control had a better IP3 since the gain distribution was better. Later models of the FRG-7 were more prone to intermodulation since the RF amplifier/mixer stages appeared to run at higher gain. Remember the input IP3 is degradation is directly proportional to the gain ahead of the 1st mixer.....also, the RF amplifier is also prone to IMD effects. I believe that a 3SK40 dual-gate MOSFET was used in this application.
About that mechanical filter mod.....how are you able to avoid signal feedaround with the board layout in the FRG-7?
One way you could avoid it is through the use of shielded cable with its 30pF/ft capacitance. No matter what approach you take, there will be compromised performance. In order to take advantage of the 120dB ultimate rejection of a mechanical filter you really need to have ground flood on the circuit board that would really isolate the I/O pins of the filter. You are not going to get that kind of rejection with that board layout. Also, even if the board layout could support a mechanical filter (which it cannot) why would anybody want to waste any money on such a device when the radio has such limited dynamic range?
In conclusion, early versions of the FRG-7 had fairly good dynamic range while later versions that had the fine tuning control had similar IMD performance to the Radio Shack DX-300. So take your choice.....the FRG-7, the problem laden 7700, or the 8800 with is poor IMD performance on the LW band. I would surmise that the poor performance of the 8800 is because Yaesu probably chose to use common switching diodes in the front end instead of using PIN diodes.
It is also interesting that this reviewer rated the FRG-8800 as having better sensitivity than the FRG-7. Was this person measuring all of these receivers at the same time, and was he using hard or soft measurement techniques? What frequency did this person make these measurements at? Were they all done at the same frequencies? Was the same signal generator being used, and if so, what was the model number/manufacturer of the generator?
Take a look at the one of the "useful" I.F. bandwidths of the 8800. The wide bandwidth has a very poor shape factor. Another thing to consider is not only the 6/60dB curves, but also the ultimate selectivity. Many things to consider when presenting the "proof".

Can anyone point me at a source for these?
==========

http://www.universal-radio.com/index.html

go to the universal radio home page. look under desktop radios.
go to the AR7030+, at the bottom, you'll find this. little high.
you might email them and ask if they have another brand that's cheaper.

Father Michael...

I don't know where my manual is, but I'm pretty sure it says that the flashing E means that the AA batteries are bad. (It's been so long since I've used that radio that I don't even remember where the AA batteries go in it.)

I owned an FRG-7 for a year but passed it on as being useless due to it's
poor filters and intermods.
But there is always the exception, in Cape Town is a DX friend of mine who
swears by his Frog and leaves his awesome Drake R7 on the shelf. He is one
of the world,s most accomplished MW DXer's and says the Frog delivers such
superior audio on the really faint DX catches that he will not upgrade to a
more modern high end receiver - go figure!
He runs rings around us with our more modern RX's..!!!

I also owned a FRG-8800 for a couple of years - another useless receiver
that I was glad to get rid of. On Robert Sherwood's
http://www.sherweng.com/table.html
he tested it and the filters were so poor he couldn't even get a
measurement.

Hi John,

I had variable experience with the FRG-7, depending on which iteration that I had. I remember that when using an 8 foot diameter untuned loop, MW reception was very good with no signs of intermod.
Under these same conditions with a later iteration (I had both units at the same time), there would be a marked increase in the noise floor as you approached a strong signal. It almost sounds as if there were very high noise sidebands coming from the 1st LO, in turn causing reciprocal mixing.
I must apologize to Mike M for jumping a bit hard on his comments. I've talked directly to him over the phone in the past and he is an ok person, but unless you actually make test measurements yourself you never know actual test conditions.
Please accept my apology Mike.....it was one of those 18 hour work days.

Pete

THKS for relp - I rechecked voltage on batts - stiil got letter E
I then hooked up RADIO to a 6V Lantern batt & THEN WAS OK - so I
rechecked the AA batts while UNDER LOAD & BINGO - (1) of the AA batts
would read only .75 V when under load ...
SO THAT WAS IT - (1) WEAK 'AA" batt "under load"
THKS AGAIN FOR YOUR REPLY ....
I went back over my manual - I still can't find any mention of the
letter 'E' readout - maybe a revised manual is out with that info ?

Equal attack and release times over the entire range seems so
unconventional, at least for HF, MF, LF radios. I see the Microdyne 700 is
VHF/UHF and does not support AM. Fading at VHF/UHF line-of-sight is probably
very different than for ionospheric propagation as are the modes supported
and the fact that a human is not decoding the output.

From my readings, it seems that Fast Attack (less than 10 ms and closer to 1
ms often touted) was preferred for HF/MF/LF AM/SSB with selectable Release
speeds from a few tens of ms to over a second. After experimenting with AGC
modifications with that design objective, I'm inclined to think that the
Attack should be proportional to the Release, say, 10-20 times faster, not a
constant <10 ms. A really fast attack and really slow release combo resulted
in a single impulse of interference knocking gain down for a long time.
Equal attack and release speeds when too slow result in ear-damaging swells
of volume or unmanaged bursts of interference.

What do you think?

Any idea what the attack/release speeds are on your SW radios?

4590. Sangean 404

Newsgroup: rec.radio.shortwave
Date: 2006-05-13 21:39:21 UTC
From: S Walters <compucat@sybercom.net>
Message-ID: <126ckgb9jeormc9@corp.supernews.com>
Source record: 73798

I am considering a small digital shortwave set for travel purposes and am considering the Sangean 404 and the Sony SW35. I have a Sony 7600GR and a Kaito WRX911 and am a regular SWL so I know a little something about portable shortwave radios. How is the build quality on the Sangean 404? Iwant a radio that can stand up to being carried around and not fall apart after six months. My Sony "GR" is too nice to be carrying around. I would hate for something to happen to it. The Kaito 911 is good but I want the sleep timer and alarm clock features as well as a lighted display for night time use. I like the SW35 but the Sangean 404 has direct entry tuning which is a real plus. I have read good and bad reviews on both and since no local stores carry either, I can't test them out. Build quality is first and foremost. I have a Sangean 622 which is not a bad set but performance could be better. Of the 404 or SW35, which is the better built radio?

Yea, right.. So, you are an adult nerd ? Actually, you have spent all
of you money of those now, soon to be useless, SW radios, instead.
What a waste, with SW going by the way-side (BBC, Voice of the Andes,
and many others)... sucker !

He's there. I listened to him last night. He comes in best on 9550
IIRC. I'm listening in the mid-atlantic region on a Sony 7600GR off the
whip. Very strong signal even on Kaito WRX911.

My brother went to school with Julie Nixon and dated her for a while, but the Secret Service had to fallow them on dates. So you can guess, the personal life I had, not hunkered down in some "ham shack", chasing that elusive DX signal. Are you one the the, "DX hounds" ?

4602. Re: Sangean 404

Newsgroup: rec.radio.shortwave
Date: 2006-05-13 22:14:59 UTC
From: Joe Analssandrini <analssandrinij@yahoo.com>
Message-ID: <1147558499.343286.309380@u72g2000cwu.googlegroups.com>
Source record: 73810

Dear Mr. Walters,

I have owned three Sangean radios, all of which disappointed in build-quality. My ATS-808A, which performed very well at first, was sent to the landfill after only three years. My ATS-606AP, also a nice performer at first, started getting its computer in an uproar several years ago and became unstable and unreliable, so it now resides in my crawl-space. My CC Radio is still in use (my wife uses it to listen to "TV Sound") but its buttons don't always work properly. So from my own personal experience over the last eight years, I should not recommend any Sangean-built radio.

On the other hand, I own two Sony ICF-SW35s, both of which are kept in the glove compartments of our two cars, winter and summer. I keep them there because often we will be someplace (a shopping center, say) and I wish to do some listening. While my wife is engaged in some activity in which I have no interest (helping the Chinese economy by shopping for clothes, shoes, etc.) I can pull out the radio, pop the batteries in, and enjoy myself. Both of these radios have been stored in the cars since 2002 and have always worked flawlessly. While they are themselves built in China (the only Sony SW radios built there), their build-quality is as good as the Japanese-made ICF-SW7600GR.They are lighter in weight than the '7600. Performance is good though not in the same class as that of the '7600. Memories are retained even when the batteries are out for months (and presumably years), though that is really of little import as station schedules change at least twice a year (and sometimes even more often).

Overall, I think you would be most pleased with the ICF-SW35. It will obviously be your "second" portable and it serves me extremely well in that capacity.

I hope this has been of some use to you.

Best,

Joe

I rather die in a terrorist attack than live in the police state that
the BCF (Bush Crime Family) wants to impose on the US.

I am so sick of these chicken shits that see Al Qaeda around every
corner. Grow a spine, you cowards.

Remember, the WTC only collapsed because an inept government let it
happen. 911 was completely preventable, but it would require reading
the fucking memos rather than chopping mesquite.

Rather than build a metal box for the radio, you might want to try RF shielding spray paint. It's about $20 a can, but it can do a few radios. Fry's Electronics stocks it.

The hole for the speaker lets lots of RF through. You can use the metal mesh filters used for fans in electronics gear.

Dear Ms. Simpson,

Here is just what you're looking for.

http://www.haydon.info/29_shortwave_antennas.htm

The company is located in the UK but you can contact them about
shipping to the USA. Their price is right.

I hope this is of some help to you.

Best,

Joe

4629. Building a Telescoping "Whip" Antenna for your Shortwave Receiver

Newsgroup: rec.radio.shortwave
Date: 2006-05-13 23:44:12 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1147563852.827429.7850@g10g2000cwb.googlegroups.com>
Source record: 73837

LS,

Building a Telescoping "Whip" Antenna for your Shortwave Receiver
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9499

Here is "HOW TO" make a Telescoping {Whip} Antenna for use
with most Shortwave Receivers that do not have a built-in
Whip Antenna.

NEED - A 'temporary' Whip Antenna to use with your
Shortwave Receiver ?

WANT - A 'Reference' {Whip} Antenna to compare the gain
of your latest new in-door or out-side Antenna Project.

MOBILE - Thinking of going 'mobile' and need a simple
'back-of-the-radio' "Portable" Whip Antenna ?

JUST WANT - An "Emergency" Whip Antenna available to use
- just incase ?

HOW TO MAKE IT: It's as simple as this . . .
Go to Radio Shack and buy these three items.

1. "Replacement Telescoping Antenna" with Six (6)
Sections Extendsto 72".
- - - RadioShack Calalog # 270-1408B

2. "Right-Angle BNC Connector with Strain Relief"
(Solderless Male).
- - - RadioShack Calalog # 278-126

3. "UG-273/U RF Adapter" Adapts BNC Male to 'fit' a
SO-239 UHF-Type Female.
- - - RadioShack Calalog # 278-121

4. Assemble all three items together.

HOW TO USE IT: This Whip Antenna can be 'screwed
into' the SO-239 Connector on the back of the
Shortwave Receiver and extended in the upright
vertical position for best reception.

CAUTION: Use some care in handling and positioning
thisWhip Antenna as it is not excessively mechanically
strong for its long size.

ALTERNATIVE 'PORTABLE' WHIP ANTENNAS :

Banana Plug Flexiable Wire Whip Antenna
Take a Banana Plg and connect a 48" to 84" piece of
Insulated Hook-Up Wire to it. Tie a simple Overhand
Loop Knot in the Far-End for Rigging it in place. Then
plug the Banana Plug into the Center Pin of the SO-239
Jack and Rig the Far-End with a Thumb-Tack of String.

PL-259 Plug and Coax Cable Flexiable Wire Whip Antenna
Take a 60" to 84" piece of Coax Cable with a PL-259 Plug
on one end. About 12" from the PL-259 Plug carefully Cut
and Remove the Outer Insulation from the Coax Cable all
the way to the Far-End. Next carefully do the same for
the Shield Wires of the Coax Cable. You now have the
Center Conductor and Inner Insulator exposed for 48" to
72" as the Wire Antenna Element. Tie a simple Overhand
Loop Knot in the Far-End for Rigging it in place. Then
plug the PL-259 Plug into the SO-239 Jack and Rig the
Far-End with a Thumb-Tack of String.
-Note- This PL-259 Plug and Coax Cable Flexiable Wire
Whip Antenna can be made longer 12 to 18 Feet for
Picnics and Camping or a Out-the-Window Travel Antenna.
Anything larger-longer should be a "Snake" Antenna made
from Coax Cable.

What kind of coffee cup is that in your shack? The coffee cup I am using now is by Gibson Housewares.It is a white cup and it has little red squares (like a checker board design) around the top and on each side of the cup,there are two green leaves with three cherries.Coffee cups and drinking coffee really is important to listening to Shortwave Radio,ya know.

You can cut it any way you want. Bush never vetoes a bill because he does not have to because he simply does not obey the law. He is creating a police state and he has now decided that he will leave the war for the next King, I mean president to unscrew. WMD all of a sudden becomes "Iraqi Freedom."

bush takes over a budget surplus and do you have any idea where the deficit is now? He is leaving that for future generations to clean up.

bush has been a complete failure in his terms as president. For shame on him.

no, i would rather die in a roadside bombing in a country that the president invaded illegally.

After all this time, and seeing EVERYTHING that's going on, as an aggragate.. I have to agree with this statement. Taken one thing at a time, each may have been no big deal to most people. But taken all together, it must be seen for what it is.

Some of you say "if you don't like it here, move to China (N. Korea, etc.). Well, the way the public seems to be bending over to take what this administration is dishing out, it seems they would prefer to live in those countries. After all, the basic lives of people in China are not so much different than ours. They watch movies, TV, sporting events. They go out for dinner occasionally. Their children go to school, have friends, etc. The difference is, their government watches everything they do. Their phone calls are logged, some are listened to. Their internet is closely monitored. Why, they even put up a wall once to keep out invaders.. Any of that sound familiar?

See folks, the idea here isn't that it doesn't matter if the government taps your phone because you have nothing to hide. The idea is, privacy is a fundamental human right. Our government is going too far in the name of 'protecting' us.

And as far as the excuses I hear about how Clinton did this and that while he was in office? Well.. it holds no truck with me. All that means is that Clinton was also a criminal, and should be held accountable for what he did. Nobody is supposed to be above the law in the United States, not even the president. This one seems to think that he is, and in fact on hundreds of occasions seems to have placed himself there by use of signing statements exempting himself from hundreds of newly passed laws. Is this really the sort of person you want to look up to as a leader?

I don't say all this because I'm a liberal Bush hater. I think Clinton, if not a criminal, at least had NO CLASS. Certainly he had no sexual morals. Most of you know me to be pretty much a centrist. I haven't voted for a Democratic candidate for President in over 20 years. Hell, I haven't voted for any of the wannabe's that made it to the General election in the past three election cycles.. but we have to call bullshit sometime on what's happening, and, as the poster I'm quoting says, 'grow a spine'.

I, too, would rather take my chances on dying in a terrorist attack than to continue to give up more and more of my privacy and other freedoms in the name of a 'war' on terrorism that is not likely to end in my (or even my neices and nephews) lifetime. Besides, we take a chance of dying every day just by being alive.

And... putting all the above aside.. how many people REALLY have nothing to hide that could get them in trouble with the law? How about that new mp3 you just downloaded? How about the workplace football pool? Bubba giving junior his first beer on his 16th birthday? Junior making out with his 15 year old girlfriend? That pain pill prescription you borrowed from your buddy when you threw out your back? Any of a million little things we all do that run afoul of the law, but we don't get caught because we have our right of privacy.

Just food for thought.

climbs down off soapbox

Guys like this who feel they have to brag about their credentials to
prove themselves to others usually have an empty portfolio. They
usually end up proving their worth only to themselves.

I can scan some of the pages from his book if you would like to read his
opinions.
he not only measures the receivers but he uses them for a while and gives
several pages of comments on each one.
he also devotes a page or two to his test station and I can send that also

also remember this book was written in about 1984 for whatever that is worth

4654. Re: Building a Telescoping "Whip" Antenna for your Shortwave Receiver

Newsgroup: rec.radio.shortwave
Date: 2006-05-14 03:30:45 UTC
From: mike maghakian <maghakian@comcast.net>
Message-ID: <9dKdneXwac31OfvZnZ2dnUVZ_vudnZ2d@comcast.com>
Source record: 73862

item #1 has been discontinued for over a year

"RHF" <rhf-newsgroups@pacbell.net> wrote in message
news:1147563852.827429.7850@g10g2000cwb.googlegroups.com...
LS,

Building a Telescoping "Whip" Antenna for your Shortwave Receiver
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9499

Here is "HOW TO" make a Telescoping {Whip} Antenna for use
with most Shortwave Receivers that do not have a built-in
Whip Antenna.

NEED - A 'temporary' Whip Antenna to use with your
Shortwave Receiver ?

WANT - A 'Reference' {Whip} Antenna to compare the gain
of your latest new in-door or out-side Antenna Project.

MOBILE - Thinking of going 'mobile' and need a simple
'back-of-the-radio' "Portable" Whip Antenna ?

JUST WANT - An "Emergency" Whip Antenna available to use
- just incase ?

HOW TO MAKE IT: It's as simple as this . . .
Go to Radio Shack and buy these three items.

1. "Replacement Telescoping Antenna" with Six (6)
Sections Extendsto 72".
- - - RadioShack Calalog # 270-1408B

2. "Right-Angle BNC Connector with Strain Relief"
(Solderless Male).
- - - RadioShack Calalog # 278-126

3. "UG-273/U RF Adapter" Adapts BNC Male to 'fit' a
SO-239 UHF-Type Female.
- - - RadioShack Calalog # 278-121

4. Assemble all three items together.

HOW TO USE IT: This Whip Antenna can be 'screwed
into' the SO-239 Connector on the back of the
Shortwave Receiver and extended in the upright
vertical position for best reception.

CAUTION: Use some care in handling and positioning
thisWhip Antenna as it is not excessively mechanically

strong for its long size.

ALTERNATIVE 'PORTABLE' WHIP ANTENNAS :

Banana Plug Flexiable Wire Whip Antenna
Take a Banana Plg and connect a 48" to 84" piece of
Insulated Hook-Up Wire to it. Tie a simple Overhand
Loop Knot in the Far-End for Rigging it in place. Then
plug the Banana Plug into the Center Pin of the SO-239
Jack and Rig the Far-End with a Thumb-Tack of String.

PL-259 Plug and Coax Cable Flexiable Wire Whip Antenna
Take a 60" to 84" piece of Coax Cable with a PL-259 Plug
on one end. About 12" from the PL-259 Plug carefully Cut
and Remove the Outer Insulation from the Coax Cable all
the way to the Far-End. Next carefully do the same for
the Shield Wires of the Coax Cable. You now have the
Center Conductor and Inner Insulator exposed for 48" to
72" as the Wire Antenna Element. Tie a simple Overhand
Loop Knot in the Far-End for Rigging it in place. Then
plug the PL-259 Plug into the SO-239 Jack and Rig the
Far-End with a Thumb-Tack of String.
-Note- This PL-259 Plug and Coax Cable Flexiable Wire
Whip Antenna can be made longer 12 to 18 Feet for
Picnics and Camping or a Out-the-Window Travel Antenna.
Anything larger-longer should be a "Snake" Antenna made
from Coax Cable.

It appears to be some sort of metallic, extendable tubing with a tip on one end and a threaded fitting on the other. Possible uses include toasting marshmallows or as a riding crop. Radio usage is, of course, out of the question, as it is neither vertically or horizontally polarized and NOBODY transmits at 27 degrees anymore.

Glad to be of help..

mike

Sunday can't be both the weekEND AND the start of the week. The vast
majority of people in the Northern Hemisphere consider Sunday as the
Lord's day, which, if you subscribe to the Old Testament Genesis, was
the day after creation when the Lord rested. That makes it the LAST day

of the week.

Just because some revisionist upstart of a calendar maker decides otherwise, doesn't make it so. Neither do your senseless rants against the norm. Do you also use 5766 as the present year in your correspondence? It may be accepted in certain circles, but it certainly isn't what the majority uses.

The Lib Net pre-dates Wogie and Lloyd and all the rest of them.
The Lib Net is the ORIGINAL Kook Net of 75 Meters.
They've been around since the late 70's with the latest goofy
crap for almost every Sat night running. They even pre-date
the great 20 Meter and 75 Meter Net wars. Quite a unique
run for Ham Radio, but HR has always attracted the screwballs
living amongst us. Enjoy!

Source record: 73879

I just took delivery of a fine specimen of one a few days ago. I didn't get a manual with it and was wondering a couple things.

1. The 2 whip antennas... I ass-u-me these are for FM only? The loop is obviously for H.F. I ass-u-me again that it has an internal loopstick for MW and LW.

2. The RF gain appears to work ONLY with the BFO turned on. Is this correct?

3. Is more of an observation... Damn, this thing sounds good. Sound quality puts my Sat-800 to shame. I think it's heavier too...

The Microdyne equipment was used all the way to KL and KU band and
for a lot of different applications including tracking space probes for
NASA. They are used mostly for long range digital data collection so
they are a very different from common receivers. One thing that was
different was that they used a fully linear AGC control system, rather
than the common logarithmic. I don't have all of the manuals. Due to
the RDAs that I signed I had to leave them all behind. All I have
manuals for is the C-band receivers they built and sold to CATV systems
and TV stations.

As far as the SW receivers at hand, I haven't tested any of them on
the bench. I lost most of my test equipment during the hurricanes over
the last few years when water got into my shop. The only receiver that
works at the moment is a DX-375 and possibly my HP 312 Frequency
Selective Voltmeter. I have a X-30 that was butchered by a hack at a TV
shop. He really messed it up trying to pick up Rush Limbaugh on SW
rather than listen to him on a local talk radio station. Another
receiver is a classic. A National NC183R that is going to be completely
restored. First, I have to finish repairing what little test equipment
that I can, and replacing the rest.

Republicans spend money like drunken sailors on leave. It is part of
the plan. They want financing the debt to become such a large part of
the budget that the social programs will have to be cut. They call it
sucking out the oxygen.

I've had Sangean receivers tagged under the Radio Shack brand name for a
long time now. The only only one I ever had go bad on me was a DX-399, but
that was because it took a hard fall, and it just broke. Other than that,
they have served me well for a long time all at fair prices.

JA,

Good Tip and Good Idea :
Having the Batteries "Out" of the Radio while the Radio is
not in-use (in storage in the Glove Box) is a very good idea.

1 - Keeps the Batteries Fresh

2 - Protects the Radio from any Battery Damage.

Put the Batteries "In" to use the Radio -and-
Take the Batteries "Out" for Storage.

MOBILE-TO-GO [No Batteries Required]
Another Trick is to have one of those adjustable
Adapters for a Car's Cigarette Lighter Plug (12 VDC) to
9/6/4.5/3 VDC with the right Plug for the Radio. Turn-Off
the Car's engine and simply run the Radio 'off' the Car's
Battery Power with the Adapter.
-Example- Recoton Universal Car Cigarette Lighter
DC-to-DC Adapter
http://cgi.ebay.com/_W0QQitemZ9723947246
-Add- A 23 Foot Reel-Up {Role-Up} Antenna
and you have a Mobile Listening Post.
-Example- Portable Shortwave Reel Antenna
http://cgi.ebay.com/_W0QQitemZ9724829580

keep it simple and practical - iane ~ RHF

Body handling: HTML body converted to readable text

Hi Mike,

That's ok.....I believe you when you say that these things are in the book. If it was written in 1984 he probably was using an 8640B signal generator if he was using the best at the time.....ok, it could have been a Rohde & Schwarcz generator also. Anyway, as long as he was using a tone level that was well down into the linear range of the receiver front end he would be ok.
As an example, let's say that you use tone levels of -30dBm when making the IP3 measurements on an FRG-8800. This receiver uses a diode ring doubly-balanced mixer for the 1st mixer. These mixers typically have a conversion loss of about 6 to 6.5dB so -30dBm would be an ok level.
Let's repeat the scenario with the FRG-7. Since the FRG-7 not only uses an active mixer that has around 10dB of conversion gain instead of the 6dB loss that the 8800 mixer has, we have a 16dB difference in front end gain at the start. To make things equal, we would need to reduce the level from each of our two generators to -46dBm. To make things even more complicated, the FRG-7 has an RF amplifier ahead of the 1st mixer. This amplifier probably adds another 10dB of gain to the system. Now, we would need to reduce the RF generator output levels to -56dBm. See what I mean about those levels?
I don't remember if the 8800 has an RF amplifier ahead of the 1st mixer or not, but this example is only to illustrate how measurement errors can creep into an evaluation. There are so many things that can affect the accuracy of a measurement.
Right now, I am characterizing some devices at work for IP3. I noticed that when the digital step attenuator in the device under test was set at 0dB the IP3 was measured at -1dBm. I would switch the attenuator to 1dB attenuation and the IP3 would increase to +12dBm. We decided to bypass this attenuator and the IP3 improved to +15dBm.
On a final note.....any RF amplification that takes place ahead of the 1st mixer will degrade its performance in this manner: if you add 10dB gain with an RF amplifier (or preselector) your IP3 will degrade by 10dB. As an example, the Drake R7 receiver has an IP3 of +20dBm when the preamplifier is not engaged. When you engage the 10dB preamplifier the IP3 drops to +10dBm.
A couple of other things.....-107dBm is 1uV, just for perspective. What exactly is IP3? Well, IP3 is the extrapolated point on a graph where the third order distortion products will "catch up" to the same level as your desired signal. The measurement is made in this manner: you need to combine two signal generators into an RF combiner. You also need to have about 10dB of attenuation added between the generators and the combiner so that you don't have the generators intermodulating with each other (this can occur in the output attenuators themselves). Your generators also need to have all

harmonics down by at least -65dBc or you need to have either band-pass filters or low-pass filters at each generator output. (The 6th and 9th harmonics can be especially troublesome when making 2nd order (IP2) measurements. They can also degrade IF port return loss measurements of a mixer by 8 to 10dB).
A frequency separation of at least 50kHz between the generators should be used in order to not have the phase noised sidebands of the generators affect the measurement accuracy. Next, the output of the RF combiner needs to be connected to the input of a spectrum analyzer to determine the intermodulation free dynamic range of the test setup. You need to have at least 6dB better IMD free dynamic range in the test setup in order to eliminate any measurement uncertainity.
When you look at the spectrum analyzer you will see the two tones from your test setup and you may or may not see two additional sidebands. These sidebands are your 3rd order products. Determine the difference in level between one of your desired tones (signals) and one of the IMD products. This is your intermodulation rejection, or IMR.
The IP3 calculation is as follows: IP3= (IMR/2) + Pin, where Pin is defined as the power level in dBm of one of your RF generators. You will almost notice that your IMR is better for one sideband than the other. Choose the worst case sideband for your calculations for IP3. Now that we have determined the IMD free dynamic range of the test setup we can insert the device under test (also known as the D.U.T.) into the system and repeat the measurements, keeping the RF levels at least 20dB below the 1dB compression point of the D.U.T.
When measuring complete receivers, it gets a little bit more complicated. You need to use the aforementioned test setup with at least 50kHz separation between the RF generators to prevent phase noise from those units from affecting the readings. You also need a third generator that will be set to the desired frequency on your receiver. This frequency will be called Fo. To make things easier you can use a 3-port RF combiner, with a third attenuator at the output of this generator to prevent IMD creation in the test setup.
Next, you need to have some sort of audio meter at the speaker (or line level) output of your receiver. Measure the audio output level of the noise floor of your receiver.
Now that that is out of the way, set the level of your on-channel generator (Fo) with a modulation level of 30% for a S/N+N of 10dB. This, by the way, is the sensivity measurement of your receiver. Increase the generator level by 3dB. This will produce a better signal to noise ratio.
Next, set generator 2 to Fo+50KHz and generator 3 to Fo+100kHz. This will produce an IMD product at Fo and at Fo+150kHz. We are only interested in the IMD product that lands on Fo.
Now, increase the level of generator 2 and generator 3 until the sensitivity measurement is degraded back to the original value that was measured before generator 1 level was increased by 3dB. Both generator 2 and generator 3 level have to be increased at the same time, which means that they must have the same output level.
Note the difference in level (dB) between generator 1 and (generator 2 and generator 3). This is your IMR.

Now you can do the IP3 calculations with [IP3 = (IMR/2) + Pin] where Pin is
the level of generator 1 that initially provided that 10dB S+N/N ratio.
It gets even better with FM systems because now you have to have one of your
interfering sources modulated by (I think 40% of your full modulation
index). I haven't made that measurement at work yet, so that is a learning
in process!
Sorry about the long explanation, but I should have probably done this to
begin with instead of being such a jerk with my initial response. I hope
this looooooooooonnnnnnnnnngggggggggg explanation helps to clarify some of
what goes on in this type of measurement.
If you e-mail me directly, I will be glad to send you an appnote from
Mini-Circuits that explains the various test setups. If you are measuring
IP3s up in the +40 to +50dBm range, even connectors themselves can be a
source of IMD.

I owned one of those delightful beasts for mayn 4 years and loved it.
The audio coming from that wood lined case beat any of the luggables
I've heard. My version was in excellent physical shape, but because it
was becoming a bit deaf as it approached the far end of
receiver-middle-age.

Your guesses about the antennas are right on, although I thought the RF
gain worked in AM too, but I'm not completely sure about that.

David,

If you look at the reviews for the Sony 7600GR on Amazon, almost everyone is in disagreement with you. The E5 is, "just another SW radio". The build quality of the Sony, from the reviews, is very good. Jesus Christ, all of the SW radios are basically the same - why do you all keep pissing all this money down the drain, when one good radio would be enough ? Gosh, a new radio comes out with a couple of extra features, so let's go piss another $150 !

Taliban Foreign Minister Wakil Ahmed Muttawakil learns that bin Laden
is planning a ï¿½huge attackï¿½ on targets inside America. The attack is
imminent, and will kill thousands. He learns this from Tahir Yildash,
leader of the rebel Islamic Movement of Uzbekistan (IMU), which is
allied with al-Qaeda at the time. Muttawakil sends an emissary to pass
this information on to the US consul general, and another US official,
ï¿½possibly from the intelligence services,ï¿½ also attends the meeting.
The message is not taken very seriously; one source blames this on
ï¿½warning fatigueï¿½ from too many warnings. In addition, the emissary
supposedly is from the Foreign Ministry, but did not say the message
came from Muttawakil himself. The emissary then takes the message to
the Kabul offices of UNSMA, the political wing of the UN. They also
fail to take the warning seriously. [Independent, 10/7/2002; Reuters,
10/7/2002]
People and organizations involved: al-Qaeda, Tahir Yildash, Mullah
Wakil Ahmed Muttawakil

Late July 2001: Argentina Relays Warning to the US Argentinaï¿½s Jewish
community receives warnings of a major attack against the United
States, Argentina, or France from ï¿½a foreign intelligence source.ï¿½ The
warning is then relayed to the Argentine security authorities. It is
agreed to keep the warning secret in order to avoid panic while
reinforcing security at Jewish sites in the country. Says a Jewish
leader, ï¿½It was a concrete warning that an attack of major proportion
would take place, and it came from a reliable intelligence source. And
I understand the Americans were told about it.ï¿½ Argentina has a large
Jewish community that has been bombed in the past, and has been an
area of al-Qaeda activity. [Forward, 7/1/2002]
People and organizations involved: al-Qaeda
Late July 2001: Egypt Warns CIA of 20 al-Qaeda Operatives in US; Four

Training to Fly; CIA Is Not Interested CBS later reports, in a long story on another topic: ï¿½Just days after [Mohamed] Atta return[s] to the US from Spain, Egyptian intelligence in Cairo says it received a report from one of its operatives in Afghanistan that 20 al-Qaeda members had slipped into the US and four of them had received flight training on Cessnas. To the Egyptians, pilots of small planes didnï¿½t sound terribly alarming, but they [pass] on the message to the CIA anyway, fully expecting Washington to request information. The request never [comes].ï¿½ [CBS News, 11/9/2002] This appears to be just one of several accurate Egyptian warnings from their informants inside al-Qaeda.

People and organizations involved: al-Qaeda, Central Intelligence Agency

August 2001: Moroccan Informant Warns US of Large Scale, Imminent Attack in New York In 1999, a Moroccan named Hassan Dabou infiltrated al-Qaeda for the Moroccan intelligence agency. He was sent to Afghanistan, posing as an Islamic radical on the run from the Moroccan government. While there, he was able to grow close to bin Laden. He heard bin Laden repeatedly vent his anger at the failure of the World Trade Center bombing in 1993 (see February 26, 1993). Bin Laden was ï¿½very disappointedï¿½ that the towers did not fall. Dabou heard that bin Laden had planned ï¿½something spectacularï¿½ involving ï¿½large scale operations in New York in the summer or fall of 2001.ï¿½ Moroccan intelligence passed this information to US. Around this time, US intelligence is so interested that they call Dabou to Washington to report on this information in person. Dabout makes the trip in secret, but apparently his cover is blown and he is unable to go back and gather more intelligence. Dabou is still in Washington cooperating with US intelligence agents when 9/11 occurs. After 9/11 he will remain in Washington, get a new identity, and continue to work with US intelligence. [Agence France-Presse, 12/22/2001; International Herald Tribune, 6/21/2002; London Times, 7/12/2002]

People and organizations involved: al-Qaeda, World Trade Center, Hassan Dabou, Osama bin Laden, Central Intelligence Agency

August 2001: Russia Warns US of Suicide Pilots Russian President Vladimir Putin warns the US that suicide pilots are training for attacks on US targets. [Fox News, 6/17/2002] The head of Russian intelligence also later states, ï¿½We had clearly warned themï¿½ on several occasions, but they ï¿½did not pay the necessary attention.ï¿½ [Agence France-Presse, 10/16/2001] A Russian newspaper on September 12, 2001, will claim, ï¿½Russian Intelligence agents know the organizers and executors of these terrorist attacks. More than that, Moscow warned Washington about preparation to these actions a couple of weeks before they happened.ï¿½ Interestingly, the article will claim that at least two of the militants were Muslim radicals from Uzbekistan. [Izvestia, 10/12/2001]

People and organizations involved: Vladimir Putin

August 2001: Persian Gulf Informant Gives Ex-CIA Agent Information About ï¿½Spectacular Terrorist Operationï¿½ Former CIA agent Robert Baer is advising a prince in a Persian Gulf royal family, when a military

associate of this prince passes information to him about a ï¿½spectacular terrorist operationï¿½ that will take place shortly. He is given a computer record of around 600 secret al-Qaeda operatives in Saudi Arabia and Yemen. The list includes ten names that will be placed on the FBIï¿½s most wanted terrorists list after 9/11. He is also given evidence that a Saudi merchant family had funded the USS Cole bombing on October 12, 2000, and that the Yemeni government is covering up information related to that bombing. At the military officerï¿½s request, he offers all this information to the Saudi Arabian government. However, an aide to the Saudi defense minister, Prince Sultan, refuses to look at the list or to pass the names on (Sultan is later sued for his complicity in the 9/11 plot in August 2002). Baer also passes the information on to a senior CIA official and the CIAï¿½s Counter Terrorism Center, but there is no response or action. Portions of Baerï¿½s book describing his experience wil be blacked out, having been censored by the CIA. [Baer, 2002; Financial Times, 2/12/2002]
People and organizations involved: Saudi Arabia, al-Qaeda, Robert Baer, USS Cole, Central Intelligence Agency, Federal Bureau of Investigation, Sultan bin Abdul Aziz Al Saud

Early August 2001: Britain Warns US Again; Specifies Multiple Airplane Hijackings Britain gives the US another warning about an al-Qaeda attack. The previous British warning on July 16, 2001 (see July 16, 2001), was vague as to method, but this warning specifies multiple airplane hijackings. This warning is said to reach President Bush. [Sunday Herald (Glasgow), 6/19/2002]
People and organizations involved: George W. Bush, al-Qaeda

August 8-15, 2001: Israel Reportedly Warns of Major Assault on the US At some point between these dates, Israel warns the US that an al-Qaeda attack is imminent. [Fox News, 6/17/2002] Reportedly, two high-ranking agents from the Mossad come to Washington and warn the FBI and CIA that from 50 to 200 terrorists have slipped into the US and are planning ï¿½a major assault on the United States.ï¿½ They say indications point to a ï¿½large scale target,ï¿½ and that Americans would be ï¿½very vulnerable.ï¿½ They add there could be Iraqi connections to the al-Qaeda attack. [Los Angeles Times, 10/20/2001; Ottawa Citizen, 10/17/2001; Daily Telegraph, 10/16/2001] The Los Angeles Times later retracts its story after a CIA spokesperson says, ï¿½There was no such warning. Allegations that there was are complete and utter nonsense.ï¿½ [Los Angeles Times, 10/21/2001] Other newspapers do not retract it.
People and organizations involved: al-Qaeda, Federal Bureau of Investigation, Central Intelligence Agency, Israel Institute for Intelligence and Special Tasks

August 23, 2001: Mossad Reportedly Gives CIA List of Terrorist Living in US; at Least Four 9/11 Hijackers Named According to German newspapers, the Mossad gives the CIA a list of 19 terrorists living in the US and say that they appear to be planning to carry out an attack in the near future. It is unknown if these are the 19 9/11 hijackers or if the number is a coincidence. However, four names on the list are known, and these four will be 9/11 hijackers: Nawaf Alhazmi, Khalid Almihdhar, Marwan Alshehhi, and Mohamed Atta. [Der Spiegel (Hamburg),

11/1/2002; Die Zeit (Hamburg), 11/1/2002; BBC, 11/2/2002; Ha'aretz, 11/3/2002] The Mossad appears to have learned about this through its ï¿½art student spy ring.ï¿½ Yet apparently, this warning and list are not treated as particularly urgent by the CIA and the information is not passed on to the FBI. It is unclear whether this warning influenced the decision to add Alhazmi and Almihdhar to a terrorism watch list on this same day, and if so, why only those two. [Der Spiegel (Hamburg), 11/1/2002] Israel has denied that there were any Mossad agents in the US. [Ha'aretz, 11/3/2002]

People and organizations involved: Federal Bureau of Investigation, Central Intelligence Agency, Israel Institute for Intelligence and Special Tasks, "Israeli art students", Nawaf Alhazmi, Khalid Almihdhar, Mohamed Atta, Marwan Alshehhi

August 29, 2001: Cayman Islands Letter Warns of ï¿½Major Terrorist Act Against US via an Airline or Airlinesï¿½ Three men from either Pakistan or Afghanistan living in the Cayman Islands are briefly arrested in June 2001 for discussing hijacking attacks in New York City (see June 4, 2001). On this day, a Cayman Islands radio station receives an unsigned letter claiming these same three men are agents of bin Laden. The anonymous author warns that they ï¿½are organizing a major terrorist act against the US via an airline or airlines.ï¿½ The letter is forwarded to a Cayman government official but no action is taken until after 9/11. When the Cayman government notifies the US is unknown. Many criminals and/or businesses use the Cayman Islands as a safe, no tax, no-questions-asked haven to keep their money. The author of the letter will meet with the FBI shortly after 9/11, and will claim his information was a ï¿½premonition of sorts.ï¿½ The three men will later be arrested. What has happened to them since their arrest is unclear. [Los Angeles Times, 10/20/2001; Miami Herald, 10/20/2001; MSNBC, 10/23/2001]

People and organizations involved: al-Qaeda, Federal Bureau of Investigation

August 30, 2001-September 4, 2001: Egypt Warns al-Qaeda Is in Advanced Stages of Planning Significant Attack on US According to Egyptian President Hosni Mubarak, Egyptian intelligence warns American officials that bin Ladenï¿½s network is in the advanced stages of executing a significant operation against an American target, probably within the US. [Associated Press, 1/7/2002; New York Times, 7/4/2002] He says he learned this information from an agent working inside al-Qaeda. US officials will deny receiving any such warning from Egypt. [ABC News, 7/4/2002]

People and organizations involved: al-Qaeda, Hosni Mubarak

Late August 2001: French Warning to US Echoes Earlier Israeli Warning French intelligence gives a general terrorist warning to the US; apparently, its contents echo an Israeli warning from earlier in the month (see August 8-15, 2001). [Fox News, 6/17/2002]

Before September 11, 2001: Three Countries Hear bin Laden Tell Wife to Return to Afghanistan; This Warning Sets Off ï¿½Scrambleï¿½ in US and Elsewhere A month after 9/11, the New York Times will report: ï¿½Interpreting intercepted communications, which are cryptic and in

code, and sorting through all the rumors present a formidable challenge. One intercept before the Sept. 11 attack was, according to two senior intelligence officials, the first early warning of the assault and it set off a scramble by American and other intelligence agencies. In that call, Mr. bin Laden advised his wife in Syria to come back to Afghanistan. That message, which was intercepted by the intelligence services of more than one country, was passed on to the United States, officials from three countries said.ï¿½ [New York Times, 11/21/2001] bin Laden apparently makes a similar phone call to his stepmother in Syria on September 9, 2001 (see September 9, 2001).
People and organizations involved: Osama bin Laden, Republic of Georgia
September 4, 2001: Mossad Gives Another Warning of Major, Imminent Attack ï¿½On or aroundï¿½ this day, the Mossad give their ï¿½latestï¿½ warning to the US of a major, imminent attack by al-Qaeda, according to sources close to Mossad. One former Mossad agent says, ï¿½My understanding is that the warning was not specific. No target was identified. But it should have resulted in an increased state of security.ï¿½ US intelligence claims this never happened. [Sunday Mail, 10/16/2001]
People and organizations involved: United States, Israel Institute for Intelligence and Special Tasks
September 7, 2001: Priest Is Told of Plot to Attack US and Britain Using Hijacked Airplanes Father Jean-Marie Benjamin. [Source: Public domain]
At a wedding in Todi, Italy, Father Jean-Marie Benjamin is told of a plot to attack the US and Britain using hijacked airplanes as weapons. He is not told specifics regarding time or place. He immediately passes what he knows to a judge and several politicians. He later will state, ï¿½Although I am friendly with many Muslims, I wondered why they were telling me, specifically. I felt it my duty to inform the Italian government.ï¿½ Benjamin has been called ï¿½one of the Westï¿½s most knowledgeable experts on the Muslim world.ï¿½ Two days after 9/11, he will meet with the Italian Foreign Minister on this topic. He will say he learned the attack on Britain failed at the last minute. [Zenit (Vatican), 10/16/2001] An al-Qaeda cell based in nearby Milan, Italy, appears to have had foreknowledge of the 9/11 attacks (see August 12, 2000) and (see January 24, 2001). It is not known if the Italian government warns the US government of this latest warning before 9/11.

September 7, 2001: French Give ï¿½Very Specific Informationï¿½ about Possible Attack on US Soil The French newspaper Le Figaro will report in late 2001 that on this day, ï¿½According to Arab diplomatic sources as well as French intelligence, very specific information [is] transmitted to the CIA with respect to terrorist attacks against American interests around the world, including on US soil.ï¿½ A French intelligence report sent to the US this day ï¿½enumerates all the intelligence, and specifies that the order to attack [is] to come from Afghanistan.ï¿½ [Le Figaro (Paris), 12/1/2001] It will later be revealed

that Khalid Shaikh Mohammed gives Mohamed Atta the final go-ahead in a phone call from Afghanistan the day before 9/11 (see September 10, 2001).
People and organizations involved: France, Central Intelligence Agency

....the above coming from someone who not only never misses
listening in on a Net session, but has even checked in from now to
then also! What a "hippo-crate" <---- (hint)

ps: if you missed n8wgm's late night rant last evening it was
a good one! Even Vic seemed to be fed-up with Steve/wgm's
extreme kookiness. When he (Vic) confronted Steveo on
his favorite OCD mantra about "Mary Magdalene and the DeViancy
Code of consecration of Russia", ole Steve went -nearly ballistic- in
his verbal rants of insanity. Methinks the DaVinci Code movie
will truly drive ole WGM over the edge. This virgin-mary stuff
seems to be his personal cherry-red-candy-colored-history-eraser
button.....stay TOON'ed folks!

(of course Vic was his usual obnoxious self, you could hear him
stuffing his maw with food between mic/xmit pauses...how
utterly pathetic.)

"Where's that Big Ol' CBRambo?"
"I want to hear him TALK TOUGH!"

Indiana? I lived in Martinsville,Indiana in 1947.My old buddy and I drove a 1962 Ford Falcon car I used to own to Bloomington,Indiana in 1974,,,, a T Model Ford car I had seen in an ad in Hemmings Motor News magazine. (www.hemmings.com)

I didn't buy that car because it wasen't worth the money he was asking for the car.(but in November of 1971,I did buy a very nice 1914 T Model Ford car in Sioux Falls,South Dakota,I still own that car too) (South Dakotans done like the old South,get somebody else who uses webtv to go to that webtv South Dakota room and see for yourself.I like South Dakota,,,, even though South Dakotans dont know the difference between Bison and Buffalo,I saw some Buffalos in 1964 in Vietnam)

On the way back home to Jackson,I saw an old antiques place in Indiana.Naturally,the brakes on my old 1962 Ford Falcon car locked up.(just like that Horse in the Irish,John Wayne movie in front of that pub.I bought four old T Model car wood spoke wheels and a wooden ignition accessory box thingy for T Model cars at that place in Indiana.I like Indiana.

Yesterday as I went out of the house
I saw a body lying down quiet as a mouse
She was lying face down in the sewer
What you do-I got up closer and realized that I knew her
What you see-All her organs comingfrom her inside
That's nasty-Slashed up skin, sliced-up hide
Tell me some more-Turned her over and saw the tire tracks on her head
Then what-That's when I realized she was dead

CHORUS
Twisted body, chopped-off feet
her body was minced meat
Bust crawling on her arms
She's dead can't do no harm
Gnarled-up legs, broken and bent
Her last breath has been spent

I wonder how much you had to pay
To get your mom killed in such a bloody way

I saw your mommy and your mommy's dead
I watched her as she bled

Well she had-Chewed-off toes on her chopped-off feet
Say what?-I took a picture 'cause I thought it was neat
That's cold-But the thing I like seeing the best
What's that-Was the rodents using her hair as a nest
Damn-I saw your mommy and your mommy's dead
I saw your mommy and your mommy's dead

CHORUS

I know it is your allowance that you'll really miss
But make it look good at her funeral and give her a kiss

I saw your mommy and your mommy's dead
I saw her lying in a pool of read-And she doesn't know how to swim
I think it's the greatest thing I'll ever see-What's that?
Your dead mommy lying in front of me
I'll always remember her lying dead on the floor
I hope she dies twenty times more

I saw your mommy and your mommy is dead
I saw your mommy and your mommy is dead
I saw her, I saw her...mommy
I saw your mommy

That is a nice little set. I can't help but wonder if the adhesive that holds that aluminum front panel on might give way over time. I have seen brushed aluminum trim on many radios come loose in the past.

That's interesting that WGM was in there because I listened to four hours of the show last night and W8GNQ was the person talking about the DaVinci Code and the consecration. One reason I say that is because GNQ is a Catholic while N8WGM isn't and has said so many times. Actually it was a pretty good net considering that the people on there talked about matters that have may have some pretty harsh consequences on the American way of life. However, if you choose to stick your head in the sand, that's certainly not uncommon either.

We'll be ready at Kennedy Space Center. We've are completing the
installation of an H.F. communication tranciever, VHF and UHF amatuer
radio transcievers, and a couple of satellite phones in the Emergency
Operations Center.

The last few years have been doosies regarding storm damage around here.

Of course, we'll have to extensively (ahem) check out the amatuer gear
before we declare it "funtional".

4736. AMERICA AND STATE-RUN DRM "PUBLIC" RADIO SHORTWAVE BROADCASTING

Newsgroup: rec.radio.shortwave
Date: 2006-05-14 17:31:13 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1147627873.814837.136400@i39g2000cwa.googlegroups.com>
Source record: 73993

For One and All,

AMERICA AND STATE-RUN DRM "PUBLIC" RADIO SHORTWAVE BROADCASTING :
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9516
http://groups.yahoo.com/group/ETON-E1-XM-Radio/message/2896

DRM = Digital Radio Mondiale
DRM => http://www.drm.org/

Imagine every State in the USA with a State-Run
DRM Shortwave Radio Station with a Transmission
in the 25 Meter, 22 Meter, or 19 Meter Band during
the Day; and Transmitting in the 60 Meter, 49 Meter
or 41 Meter Bands at Night.

Note - Three Bands at 500 kHz and a 25 kHz Channel per
DRM Radio Station (3 * 500 = 1500 and 1500 / 25 = 60)
And 60 is 10 more then the number of States.

50 States with a Clear non-fading High Quality Digital
(DRM) Shortwave Radio Signal covering the whole State
and received loud-and-clear in the surrounding States
and very well across most of the Nation.

Sounds like a Shortwave Paradise and the Perfect Model
for a DRM Radio System for State-Run Shortwave "Public"
Radio Stations.

OOPS ! - It Ain't America and State-Run does not Mean
the States : It's Europe "The European Union" and the
States of that Union are Nations that do run and have
run 'State-Run' {National} Shortwave Radio Broadcasts.

IMHO - DRM Shortwave Radio has a future in "The EU".

IMHO - DRM Shortwave Radio has a future in China (PRC).
+ Korea + Japan + Philippines + Indonesia

IMHO - DRM Shortwave Radio has a future in India.

IMHO - DRM Shortwave Radio has a future in Russia.

IMHO - Even Canada will have DRM Shortwave Radio.
+ Australia + New Zealand

I M H O - Any Nation Government that does now or wants
to have a 'State-Run' National Voice to Cover-the-Nation

will be Transmitting in DRM on Shortwave in the future [.]

-WHY- DRM provides for a Better Quality Signal and
Lower Power Requirements resulting in a more cost
effective means of Transmission within the Nation
and to it's Neighbors.

-WHY NOT THE USA - The USA has Laws Against any
Internal Shortwave Broadcasting to the People of this
Nation by the Federal Government and as such DRM
and Shortwave Broadcasting in general have a different
focus in the USA.

Soap-Box-Time - A Federal Law allowing each US "State"
to have a Co-Located DRM Shortwave Radio Transmitter
that would simulcasting their local Public Radio (NPR? /
PRI?) content to the whole State would do much for the
future of Shortwave Radio and DRM in the USA. For State
Wide Coverage a power level of 5 KW to 10 KW would get
the job done.

International Shortwave Radio as 'we know it' may indeed
be dying -but- National DRM Shortwave Radio may give
birth to a new model of Shortwave Radio Broadcasting
that is designed to get "The National Message Out" to
the People of the Nation and to the People in the
Neighboring Nations.

that's my one man's opinion ~ RHF

Cingular Wireless Prepared for 2006 Hurricane Season Along Texas Gulf Coast

May 8,2006

Cingular has a rigorous hurricane and emergency preparedness program in place and conducts ongoing readiness drills throughout the year to ensure network facilities and personnel are ready to go at a moment's notice.

"We hope fewer storms will come ashore this year, but our employees have dedicated themselves year-round to ensuring we are prepared," said Andy Shibley, Cingular's vice president and general manager for South Texas.

Cingular monitors and maintains the network 24/7. This monitoring system allows Cingular to assess any emergency situation within minutes.

Cingular cell sites located in hurricane-prone areas like Houston, Southeast Texas and along the Texas Gulf Coast, are equipped with permanent or portable generators in the event of power outages, which are prevalent during storms. Additionally, Cingular backs up its cell sites with batteries to prevent outages related to power interruptions lasting less than eight hours.

Cingular also has more than 50 Cells on Wheels, called "COWs," which are self-contained mobile cell sites that can be towed or driven into an area to provide extra call capacity or to restore communications following a disaster. The company's "COLTs," or Cells on Light Trucks, are smaller than COWs and can be driven where a mobile cell site is needed and include two masts for microwave antennas.

Cingular also offers tips to help consumers understand what to expect when they use their cell phones or other wireless devices during an emergency and what they can do to prepare. The most important recommendation that can help customers reach friends and loved ones during a storm is the use of text messaging.

"We saw text messaging become an extremely useful tool in the Gulf Coast region during and after Hurricanes Katrina and Rita," Shibley said. "Text messaging is a reliable way to reach family and friends during severe weather and keeps voice channels open for access to first responders on the ground in storm-affected areas."
Text messages will often go through quicker than voice calls during an emergency situation. More than 95 percent of Cingular phones sold today are text message capable. Depending on your call plan, additional charges may apply.

Cingular also encourages consumers to do the following in advance of a storm:

- Program all of your emergency contact numbers into your cell phone, including the police department, fire station and hospital, as well as
your family members.

- Have a family communications plan in place. Designate someone out of the area as a central contact, and make certain all family members know
who to contact if they become separated.

- Keep your wireless phone batteries charged at all times. Have an alternate plan to recharge your battery in case of power outages (i.e.
charging via your car charger, extra cell phone batteries, use of a disposable cell phone battery).

- Keep your wireless phone dry. The biggest threat to your device during
a hurricane is water, so keep your equipment safe from the elements.

- Forward your home number to your wireless number in the event of an evacuation. Since call forwarding is based out of the telephone central
office, you will get incoming calls from your landline phone, even if your local telephone service is disrupted at your home. In the unlikely
event the central office is isolated, call forwarding may not work.

The following information will help customers stay in touch and maximize their wireless service during and after the storm:
- Keep non-emergency calls to a minimum. Chances are that if there is severe weather, many people will be attempting to place wireless calls
to loved ones, friends and business associates. If the landline phones
are not working, this probability increases.

- Wait 10 seconds before redialing a call. On many wireless phones, to redial a number you simply push "send" after you've ended a call to redial the previous number. If you do this too quickly, the data from
the phone to the cell site does not have enough time to clear and may contribute to network congestion.

- Use your wireless phone to access weather and news updates. Many homes
lose power during severe weather. If you have a wireless phone that provides access to the Internet, you can watch the latest weather and news report.

- Use your camera phone to snap, store and send photos of damaged property to your insurance company.

Cingular will provide updated information about its hurricane preparation at its dedicated website: http://www.cingularhurricaneupdates.com. High resolution photos are also available for download on the site.

This is certainly an informative discussion, as I had read and
rationalized that the later FRG-7 with Fine Tuning would be the more
desirable unit. Thanks for educating us on that, Pete!

BTW, Mike, what does that book say about the Kenwood R-1000? I enjoy
mine but it does have some flaws the way it was out of the box
originally, definitely needs some modifications to be all that it can
be.

Speak English you freak.

You mean the 12 MHz, 13MHz and 15 MHz etc. bands, don't you? Nobody
(except a few dinosaurs) uses the old wavelength designations.

The is the USA. No government broadcasting stations are necessary.

Darn it your right! It was GNQ. I get these two mixed up
like trail mix you see, those dried pineapples, apricots,
rasins, almonds, soybeans, cranberries and sunflower seeds.

Steve,

Here in the USA may be "Yes" - DRM is hopeless.
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9517

But... In a Nation of States {Nations} like Europe
"The EU" - DRM may be the Answer to transforming
Shortwave Broadcasting by providing for Better
Quality Signals and Lower Power Requirements
resulting in a more cost effective means of Shortwave
Transmission within the Nation and to it's Neighbors
within The EU.

Digital Radio Mondiale (DRM)
DRM => http://www.drm.org/.
{Digital Radio for the World}

SHORTWAVE RADIO - Is simple a means of Broadcasting
"Getting-the-Message-Out" on a National and World Wide
International Level and Digital Radio Mondiale (DRM)
has the potential to : Do It Better and Cheaper !

Digital Radio Mondiale (DRM)
DRM => http://www.drm.org/.
{Digital Radio for the World}

Where a Nation Government wants to have a 'State-Run'
National Voice to Cover-the-Nation it will be using DRM
as the Mode of Transmission for Shortwave in the future.

Digital Radio Mondiale (DRM)
DRM => http://www.drm.org/.
{Digital Radio for the World}

again that's my one man's opinion ~ RHF
.
AMERICA AND STATE-RUN DRM "PUBLIC" RADIO SHORTWAVE BROADCASTING :
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9516
http://groups.yahoo.com/group/ETON-E1-XM-Radio/message/2896
.
DRM = Digital Radio Mondiale
DRM => http://www.drm.org/
{Digital Radio for the World}
.
.

Shortwave Listener Antennas => http://tinyurl.com/ogvcf
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/
SWL Antenna Group => http://tinyurl.com/ogvcf
.
The Shortwave Listener's Blessing :
SWL BLESSING => http://tinyurl.com/s2bjm
May You Never Tire of Listening to the Radio and Always
have Strong Signals and Noise Free Reception ~ RHF {ibid}

As the government and the mainstream media are both arms of the
Fascists, the concept of something as quaint as an officially
designated ''government'' broadcaster is quite laughable.

Makes sense to me. Digital mode receivers would want the fastest AGC
times, AM would be a little slower and SSB the slowest so the background
noise would be lessened between words.

Those receivers you mentioned used for digital modes probably had faster
response filters than you find in most short wave receivers in addition
to the fast AGC.

My approach is to start with fast since I spend most of my time
listening to broadcast AM mode. Sometimes the signal flutters rapidly
and so I gradually switch to a slower AGC until I get improved sound
quality and then no slower. Same with SSB reception where I am Trolling
for signals. Then when I find something I want to listen to for a while
I switch it to medium or slow; whichever sounds better.

Basically searching for signals use the fastest AGC then slower as
needed to improve sound quality.

Well, with the solid state equipment it does not take much to kill
components. If it is ever a concern you can buy an inexpensive mat with
a high resistance wire connection to the AC mains ground to bleed off
static charge.

Put the unit on the mat and your hands on the mat before you touch the
inside circuit board.

One thing some people may not be aware of is that semiconductors can be
"wounded" and not just killed. If "wounded" the electronics can die at
a later time for no apparent reason.

With the computers I turn it off but leave it plugged in and touch the
chassis before I touch anything else. If I add something like a drive I
will touch chassis to chassis first or mount it before plugging
anything together.

> Radio Stations ?

Just for your information, under US law, government based stations are prohibited from broadcasting directly to the US Population. While you can hear the VOA here it is primarily meant for those in Europe, Africa, Asia, and Central and South America. Not for domestic consumption. Furthermore, unlike most of the rest of the world, the US has never had a government sponsored broadcaster SUCH as the VOA. Not to mention that the US media is in private hands and generally owned by 12 or so large corporations.

The law was passed due to the possibility of such a station to become a propaganda outlet much like what Hitler possessed in Nazi Germany. That was the prohibition on having domestic government sponsored stations. Now in the 1930s and 40s, US stations such as WLW 700 in Cincinnati as well as other large clear channel broadcasters did operate shortwave facilities in the US. Furthermore PBS isn't in a true sense a government station although it gets funding from the government and public at large.

Meanwhile your hero sits on his Tush and does a flyover to check out the
damage. But like most of the bureaucrats in DC, only their little world
matters while the rest of America is flyover country to be avoided by
the elites on the east and west coasts.

Interestingly though, that your hero in charge of the Executive branch of government is the guy who is letting all of the illegals in here. Just like McCain popping his head up so he can get votes in the next election. Interesting, that the so called Liberals aren't the ones engaging in Empire building much like the Romans. If Dubya was such a conservative and man of laws, we wouldn't have this illegal invasion now would we.

At these broadcast distances, you wouldn't need a lot of power to transmit conventional shortwave. If you want better audio quality, there's always FM.

>

I seriously doubt that anyone will be listening. I won't be. I think DRM is someone's secret plan for destroying the shortwave bands. What little escapes DRM will be eaten up by BPL.

A Yagi would be a good antenna choice with high gain in one direction
only. I guess the power line noise is very broad band and a small Yagi
could pinpoint the problem.

Single conversion radios generally suck. You want at least a double or
triple conversion receiver. With the price of them being quite low
either a Icom R 75 or similar receiver would be good. That or something
like a Sony 7600 GR. In fact, I am wanting a 7600 myself

I had a cheap Chinese single conversion radio years ago back in the late
90s and all it did was whine and whistle. Still could pick up most of
the major broadcasters though. BBC, Australia, DW etc.

Moron has an excellent ring for you. After all, any guy that wants to get a religious war started between the two predominant religions in the world going has some issues. This isn't exactly the Middle Ages and guys fighting the Crusades these days especially with many countries having nukes. Now run along boy and follow your leader as he finds a way to create a nuclear holocaust. But after all, isn't that what the hardcore relgious fanatics want rather than peace, tolerance, and human decency which was more the teachings of Jesus rather than those of the Bush kissers which is empire building.

>>Things are a lot better now than they were under Clinton<<

Not in the US.

It is a shame that Clinton cannot return to the White House--he is more popular than Bush (of course, so is Osama) and certainly did a better job than Bush--but then again who didn't??? Look what bush managed to do in only 6 years.....it will take years to undo the problems of the bush and his admin. What a shame to saddle our children and their children and their children with the 8 years that bush will leave us with.

You hear that tone in the broadcast that warbles with the modulation? I think it is something that biases the transmitter PA stage at some point. The only time the tone is steady is when there is a quiet moment. Almost sounds like weather fax when music is playing or someone is talking.

People like Ben Franklin and the other Founding Fathers are the reason
you are now an American. But that's right, you would rather be a Euro

Peon. Of course, it shows your educational ignorance to poor mouth someone who contributed much more to American society than you will ever contribute. In fact, what you strike me as is a loser who cant create anything of lasting value. Since you have that moronic mindset that you must follow the leader perhaps China, Europe or Russia would be best for you.

In your case, you should stay down in Georgia which pretty soon will
become a Mexican protectorate with the Hispanic invasion. After all,
it's pretty much a place for the hillbillies of the Deliverance.
Interesting that the movie was based on a place in Georgia. You weren't
one of the extras for the movie were you beerbarrel. Then again with a
name such as beerbarrel, it doesn't say much for your intelligence.
Considering that you are as dull as wood, thats not a surprise.

At least people up in the Midwest can actually spell the word "Corn"
which isn't something even your ill-educated ass can do. Now down in
Cornholing Georgia home of the bubba you would know about swapping
corncobs. Is that something that one of your Georgia brothers taught you.

Interesting how Tush sit there aND acted all dumb after being told of
the disaster. Rather than cutting the presentation short with the kids,
he sat there and blathered on in his low brow educated manner.

Computer stores sell anti static mats and anti static wrist strap thingys.Never work on a computer without them.Be certain the metal tools you use do not have any magnetism in them.Always touch one of your hands to the computer frame every few seconds when working on a computer or fancy high end computerized radio.
cuhulin

Interestingly how all of the so called conservatives around here are bitching about the liberals while their so called conservative master is the one who is selling the country down the river. What goes around eventually comes around. So when RHF and his boys get their karma, you can expect they wont like it very well.

Meanwhile the illegals are running in as fast as they can, I guarantee that a lot more than 11 million illegals are here. Maybe more like 20 to 30 million. Interesting that the so called conservatives are blathering about it being the libs fault when their born again lying leader allows it to happen. You know, the guy who doesn't read newspapers. How could you elect an illiterate such as that. Of course, when a lot of the people are illiterate you should expect them to elect morons.

If you really want to do something about it, email the Grundig and Eton people as well as all the other producers of electronic junk made in China. Made in China cheaply and then promoted in the US for maximum profit. Does even Sony make their radios in Japan. I dont own one so I dont know.

Propagation has been crappy here lately mostly anything above 11 MHZ is dead at night except for a few ham stations you hear. I was listening today to 13, 15, 17, 21 MHZ and it was lousy even the stations I've listened to for years were horrendous. I recall that 15475 Radio Africa one was buried behind a lot of static and poor reception. I know the stations are still there but its been poor lately. Not to mention 20 meters amateur radio being lackluster especially for long distance DX.

Not at all. I give that as an example that most people who say they have 'nothing to hide' generally do have something that skirts the law. Nobody is perfect, nobody follows every law to the letter. I don't stick to the speed limit on the freeway. Most of my friends when I was a kid smoked. I don't see any haloes on anyone on this planet. But that's all beside the point.

As I said in my original statement, that only makes Clinton a criminal too. Two wrongs have never made a right.

That was before the latest scandal of the Administration. Even the Republicans are coming out against this spying crap. Isn't that what a police state does? Or is DxAce a supporter of the police state? Sounds like a communist to me. What is interesting, I wonder what the next poll

will come down to.

4836. Eton E1 Frequency Alignment

Newsgroup: rec.radio.shortwave
Date: 2006-05-14 22:30:13 UTC
From: Guy Atkins <dxnospam@guyatkins.com>
Message-ID: <EoudnRHnSq3uMvrZnZ2dnUVZ_vednZ2d@comcast.com>
Source record: 74045

I couldn't resist *gently* poking around inside my recently-acquired E1, to try and locate an adjustment for the master oscillator that controls the frequency display. I'd read a number of comments about individual samples being off by 50 to 150 Hz or more, but I had not seen any postings on a do-it-yourself alignment. My particular E1 was off by about 140 Hz after warm-up.

After opening the radio and removing the back panel mounted PCB, I located a small hole through a copper-colored metal cover. sure enough-- a tweak with a small screw driver adjusted the frequency to bring the radio into a "by ear" alignment for USB and LSB.

However, after reassembling the radio, I discovered this adjustment hole is accessible through the left ventilation slot found under the flip-stand of the radio. That's handy! Now there's no need for E1 owners to open the case to adjust the frequency display.

Just use a very small slot screw driver (jeweler's type) and make small adjustments while tuned to WWV in USB/LSB, switching between the two modes to find the best audio balance and/or elimination of the beat tone. A plastic tool is preferred, but it didn't seem to make any difference if I used a metal screwdriver. This alignment seems dependent on the band or frequency being tuned; that is, I can achieve good alignment on 15 MHz WWV, but my local broadcast stations are very slightly off. Conversely, if I adjust the radio for zero beat on my medium wave locals, WWV on 10 MHz and 15 MHz are slightly off. I did the final tweaks with WWV, since I expect to tune any local MW broadcasters in synchronous AM, anyway.

This adjustment technique does nothing for the characteristic drift of the radio while it is warming up, nor does it correct any imbalance between LSB and USB mode offsets. Hopefully someone will discover the fix for LSB/USB imbalance; the trimmers may reside under one of the soldered, metal shielding covers inside the E1. Perhaps I'm expecting too much from a portable, but the E1 excels in so many other areas it's a shame to hear the tonal differences when switching between LSB and USB. Without these two modes balanced, you can only adjust the frequency readout for zero beat with LSB *or* USB, but not both.

Body handling: HTML body converted to readable text

he says that with filter upgrades the R-1000 would be a very nice receiver

I have pointed out many times publically that almost every receiver below $1000 new except the Drake R8 series and SW-8 series made in the past 25 years needs some serious filter upgrades. Some were available as manufacturer upgrades as in the Kenwood R-5000 but not cheaply in that case !

I have been on a mostly unsuccessful campaign to better the Radio world with better selectivity but most people don't understand or care it seems.

I have also tried to explain that the $20 Kiwa filter is a poor choice to upgrade to but people still go crazy for them when there are better options available for LESS money !!!!!! Maybe because it is more work to do it better is the answer ?

Most people would not believe the improvements in reception when filters in most sets are upgraded. I even upgraded the filters in my beloved HF-225 and improved the performance.

I do touch upon filters in my DX-394 article that can be found on my web site http://home.comcast.net/~maghakian
the DX-394 with proper filters and few minor fixes is a real nice radio. The Kiwa filter is really not the way to improve this set. It is just another cheap filter with a tighter nose that cuts out the hets but other important parameters are still junk.

Not to say that other Kiwa products are not great, I use a Kiwa Preamp for example.

well one habit I developed a few years ago is before I touch any antenna or inside of a radio/receiver/computer is to grab a metal chassis or something to discharge myself

I have seem micropics of damaged semiconductors that appear to keep working but actually have shorter lives due to the electric discharge.

>> >

missed n8wgm's late night rant last evening it was
how is this related to policy?

I supose it may quilfy for shortwave or misc but has nothing to do with
policy

More interesting that the Secret Service let him hang around for
another 20 min. or so after the second tower was hit. Cheney was
bodily carried by two secret service agents to a bunker beneath the
White House shortly after the FIRST plane hit. That they would leave
young george sitting there with a stupid look on his face suggests
they were either grossly negligent in their duties or had reason to
believe he was in no danger.

Yeah, I caught bits and pieces of the Net last night. Nothing like it
was about 10 years ago, though. I mean, some of the verbal fights
between the Net members and the jammers like K5BLB, K5ZU, WA9KJI,
W9ART, etc, etc, were hilarious. Some of the more entertaining Net
members/jammers either left or died off. I used to really enjoy

WB4AIO's coments.He was one of the more intelligent guys on the air.

I sometimes hear K5 Big Load'a Blubber on the air with his same old tired jokes. I wonder what happened to Krazy Jewish Injun?

Oh well, the gold ol' days are gone.

4847. explain to me these two statements in one auction

Newsgroup: rec.radio.shortwave
Date: 2006-05-15 01:51:56 UTC
From: mike maghakian <maghakian@comcast.net>
Message-ID: <xrKdneP20IcjQ_rZnZ2dnUVZ_u-dnZ2d@comcast.com>
Source record: 74155

this is from that scumbag radio-mart in one of this weeks auctions (for a sony 5100), and I can't understand how these two statements can be right next to each other.....

This thing is in great shape. We have completely gone through it and can honestly say that nothing needed doing to it, I love radio's like this.

The only thing is that the main tuning dial slips, the receiver tunes just fine but the needle pointer stays in one position, this does need addressing.

4848. Re: The FRG-7 is really not that great,,, here are the facts

usually not myself but I do give recommendations, what receiver is in
question ?

Reagan started it. He's the one who put the amnesty bee in their
bonnet.

There are no conservatives in Washington (except maybe Dr. Ron Paul
(aka My Hero).

I have a DX-394, a DX-302, a Sangean ATS-803A that I'd like tweaked, tuned
and upgraded. I also have a DX-160 but honestly think I'll get rid of it;
it makes no sense & doesn't seem to be any better than any of the other
receivers I have

They're not too terrible in the boonies, but if you're in a big city
or near the coast there are just too many hets all over the place.

There's an interesting piece by columnist David Brooks in the Sunday
NYTimes about conservatives who covet freedom giving way to
conservatives who covet authority.

The police are coming, the police are coming...

> Ventura, California

Since the ATX form factor arrived you are supposed to unplug the
computer to turn off all power inside the case there is a standby +5 VDC

that can cause problems. Just put a 1 Meg resistor between a pair of alligator clips and use it to ground the case, or take a spare power cord and cut off the two flat blades so that only the ground pin makes contact.

A wrist strap with a cord and the one meg isolation resistor should be worn, as well. If an item is shipped in an antistatic bag, lay it on the bare chassis for a few seconds before opening it. I worked in surface mount electronics manufacturing for four years and static protection is a science of its own. If you do have a antistatic mat, NEVER clean it with anything containing silicon. I use plain old household ammonia without any soap (Sudsing).

Liberty Net is somewhat amusing but that kook Karl
up in VE7 land was on all day on 14.275
ranting like a banshee on Sunday the 14th.
Then of course in came Michigan Mike,
Vietnam Dan the Fighting Man, Zipper
Queer from VT, and a dozen or so Un-ID'ed
QRM'ers who turned 14.275 into a COMPLETE
NUTHOUSE in very short order, complete with
someone playing German Marching Music at one point.

It was like the old '313 of years past and MUCH MORE refreshing than
listening to K1MAN spreading mayonaise
into the asscrack of 20 Meters and taking a big bite outta the same... :)

nuthouse

No, I haven't been bothered by a Grundig radio since the '70s, but
you on the other hand keep on buzzing like an already bloated misquito.

4862. Every 50 KW Clear Channel In The USA With A Difference

Newsgroup: rec.radio.shortwave
Date: 2006-05-15 03:07:33 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1147662453.011103.52830@i40g2000cwc.googlegroups.com>
Source record: 74170

For One and All,

My 'other' Crazy Idea was to require each 50 KW
Clear Channel AM/MW Radio Station to have a 5 KW
Shortwave Simulcast.

Every 50 KW Clear Channel In The USA With A Difference
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9520

Plus require all 50 KW Clear Channel AM/MW Radio Stations
to carry locally produced 'original' Programming from
5 AM to 10 AM in the Mornings and 7 AM to 12 Midnight
in the Evenings.

A 50 KW Clear Channel Radio Station from Boston should be
"The Voice of New England" and not a Dr. Laura repeat.

A 50 KW Clear Channel Radio Station from New York should
be "The Voice of New York" and not a Sean Hannity repeat.

A 50 KW Clear Channel Radio Station from Atlanta should
be "The Voice of the South" and not a Al Franken repeat.

A 50 KW Clear Channel Radio Station from Miami should be
"The Voice of Hot Miami" and not a Terry Gross repeat.

A 50 KW Clear Channel Radio Station from Chicago should be
"The Voice of Mid-America" and not a Rush Limbaugh repeat.

A 50 KW Clear Channel Radio Station from St Louis should
be "The Voice of St Louis" and not a Phil Hendrie repeat.

A 50 KW Clear Channel Radio Station from New Orleans should
be "The Voice of the Big Easy" and not a Jim Bohannon repeat.

A 50 KW Clear Channel Radio Station from Dallas should
be "The Voice of Texas" and not a Mike Gallagher repeat.

A 50 KW Clear Channel Radio Station from Denver should be
"The Voice of the Rockies" and not a Ken Hamblin repeat.

A 50 KW Clear Channel Radio Station from Phoenix should
be "The Voice of Arizona and the South West" and not a
G. Gordon Liddy repeat.

A 50 KW Clear Channel Radio Station from Seatle should
be "The Voice of the Pacific North West" and not a
Michael Medved repeat.

A 50 KW Clear Channel Radio Station from San Francisco
should be "The Voice of the California" and not a
Michael Savage repeat.

A 50 KW Clear Channel Radio Station from Los Angeles
should be "The Voice of the Hollywood and La-La-Land"
and not a Michael Reagan repeat.

A 50 KW Clear Channel Radio Station from Anchorage should
be "The Voice of Alaska" and not a Randi Rhodes repeat.

A 50 KW Clear Channel Radio Station from Honolulu should
be "The Voice of the Hawaii and the Pacific" and not a
Bruce Williams repeat.

the others are not worth modifying at all.

as for the DX-394, the person who does work I don't want to do is
unavailable for the next month or so. let me see what I can come up with.

4867. Small Tuning Pinion Gear

Newsgroup: rec.radio.shortwave
Date: 2006-05-15 03:40:34 UTC
From: jyams73@bigfoot.com
Message-ID: <1147664434.810661.115860@y43g2000cwc.googlegroups.com>
Source record: 74175

I have a 1980's General Electric 6 band model 7-2990A with a broken pinion gear on the tuning shaft. The gear is plastic / nylon, 18 teeth, 0.1875" bore and 0.3125" face. The gear slides on the end of the shaft and drives the spur tuning gears. I have learned that this gear was defective on many of these radios. I have searched the net for a similar part and can't find anything. Does anyone have any suggestions for a source of small gears like this?

Last time I checked is that Kerry did have a Purple Heart which is something that they award to people who do things of courage. Do you have a Purple Heart? Have you done anything of merit or duty to others? Last time I checked, getting a purple heart takes having others seeing that what you did was heroic. Have you done anything heroic? Or are you another fat piece of shit who hides and runs his mouth.

I find it funny that your leader went AWOL for a time while in duty. But then again, when your daddy treats you like a silver spoon boy you shouldnt expect any different. But that's the usual incoherent blatherings of DX Ace the guy who is a neo commie supporter. A type of guy who hides behind his mommy rather than doing any sort of useful service.

Thats funny!! Bush came out the other day and wouldn't confirm that the phone tapping occurred. Now what the hell does he have to hide? Things are better under Bush? The economy basically sucks and it's better. Millions of lost jobs? Anywhere from 11 million to 30 million illegal aliens in this country? What is it that you're smoking? The federal deficit went from 5.7 trillion to 8.3 trillion in the matter of 5 years. Underfunding of transportation and infrastructure projects. But its better now isn't it? Record trade deficits? Outsourced jobs to India and highly skilled jobs at that? Have you attempted to look for a job lately versus say 1999. Or are you another of the worshippers with your head in the sand.

Kind of like when Bush and his cronies outed a CIA agent who knew that
the whole WMD fiasco was a fabrication. By the way, where were those
WMDs that the Baathists had? Why didn't your hero find them? Yet, we
still can't find the September 11th bastards?

NPR? You feel there's not enough communist stations on SW right now?

The BEST idea for 50 kw clear-chanel stations would be to actually give
them a CLEAR channel to operate on, like they had 50 years ago.

Bush can always veto an entire bill without spending a dime. The president has the veto authority which is a key component of having a government with seperation of powers. Or did you flunk basic government class? By the way, isn't there a Republican majority in the House and Senate? What about those so called conservatives in there? Fakes, frauds, those neo cons.

That is easy enough to fix. A few drops of contact cement and it
will never come back off. I have glued hundreds of aluminum trim parts
back on radios and TVs over the last 30 years and never had one come
loose.

Exactly, you have the right idea about that. The Business Roundtable and the corporate elites are in the process of crushing the economic independence of American workers and driving wages and benefits the the ground. BH claims you are against the working class and poor folks when actually people like you are looking out for those very people. Some idiots in here want to make it a race issue but that's not the case. Of course, you have to remember some of the posters in here may very well hiring illegal aliens or work for those corporate elites meanwhile screwing the working and middle class.

And doesn't Christianity promote the hateful destruction of others. Or
is that your theology and not the teachings of Jesus. Big difference
between the chants of the Neocons and their Zionist enablers and the
true teachings of Jesus.

Funny that you bring it up about gays, but did your mommy name you Tracy
because she didn't know what sex you were. Maybe you're still confused.
I'm not interested in your sexual affairs or if you raise up your dress
to pee on others.

I don't believe it. Since when does Bush give a shit about the invasion
of the USA by Mexico? This has to be just a political ploy to to
improve his poll numbers. I betcha it's not 10,000 troops all at once.
He's probably planning to send one soldier per day, on a 1-day
assignment, over the next 27 years.

0.1875 is 3/16th of an inch. There may be places nearby that sell motors with that shaft sizer. It would be a good starting point. Better hobby shops may carry gears that you can drill out to fit. They use them in radio controlled cars and stuff, but most likely they'd be a metric shaft.

Bush's ultimate purpose is amnesty. Deployment of troops is a fraud,
to alleviate opposition to it.

The amnesty will become a huge magnet. Border crossing will intensify.
More people will attempt to come in. Neither wall nor troops can stop
them. The whole Latin America or third world will eradicate any wall
on the border.

Leif speaking: Fox and other open-borderers don't want any troops on the line because they suspect they might be effective against illegal alienship. So, after he had bent Bush's ears for 30 minutes on the phone, Bush said, "Damn, Foxy, don't worry about those Guards! They're only temporary 'till the heat's off. Anyhow, we won't let 'em do anything except check Border Patrol time cards and stuff like that.": Bush said he wanted to be best friends with Fox..

For those of you in the United States, (perhaps even people outside)
please consider writing or e-mailing a comment about how important the
real-time solar wind data is to our hobbies and emergency HF comms.

Please do not crosspost any replies

Solar Wind Comment Period Nears Its End

On April 3, 2006, the National Oceanic and Atmospheric Administration
(NOAA) issued a press release announcing a call for public comment on the
value of continuing real-time solar wind data, and products derived from
such data, provided by the Space Environment Center. Since that time,
NOAA has received many thoughtful, compelling comments regarding this
issue. It is obvious that people put their valuable time and effort into
expressing themselves, and their input is most appreciated.

There is still time to add your comments, but time is running short. As
stated in the April 3 press release, the comment period continues until
May 18. All input is important, so, if you haven't voiced your opinion
yet and would like to, please take the time to do so. Please send your
comments to:

solar.wind.comments@noaa.gov or contact:

NWS Contacts: Beth McNulty or Dorothy Haldeman

Mail:
National Weather Service
Office of Climate, Water and Weather Services Aviation Services Branch
1325 East-West Highway, SSMC2
Silver Spring, MD 20910

Phone: 301-713-1726 x116 or 301-713-1726 x130

Thank You

"Fox and other open-borderers don't want any troops on the line because
they suspect they might be effective against illegal alienship."

Plus dope-smuggling.

In any event, they don't want soldiers on the border because soldiers
will even eventually shoot back.

"So, after he had bent Bush's ears for 30 minutes on the
phone, Bush said, "Damn, Foxy, don't worry about those Guards! They're
only temporary 'till the heat's off. Anyhow, we won't let 'em do
anything except check Border Patrol time cards and stuff like that.":
Bush said he wanted to be best friends with Fox.."

Which won't matter, once shooting starts.

Why is it funny? Is it funny the past president of Per is Fujimori? Or Menen in Argentina? Or Bucaram in Ecuador? Or the former resident commissioner of Puerto Rico in Washington was named Fuster? Or the big Chrysler dealer in Mexico in the 60's was O'Farril? Or the liverator of Chile, O'Higgins? Or the head of the Latin Grammys, Sergio Rozenblat? Or the Libermans, owers of a patent medicine company in Mexico... or enrique Riekenhoff, former Puerto rico Olympic Committe delegate.

What's your point? There are millions of people in Latin America with names that are not Spanish.

You socialists keep saying that, but none of you can name a single lie
he told. That's one of the major symptoms of BDS.

But the week as shown on a calendar is. And there, on most calendars,
one can easily see Sunday and Saturday on both ends of the week, making
them (wait for it!) week ends.

The WMDs were almost certainly moved to Syria at the very beginning of the
war, as evidenced by satellite photography. If he invaded Syria to get
them, you and the other liberals would just whine more.

4900. BBC World Service radio attracts record listeners

Newsgroup: rec.radio.shortwave
Date: 2006-05-15 06:59:49 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <4cqn74F176pc6U1@individual.net>
Source record: 74058

14 May 2006

Audience figures for the BBC World Service have reached a record 163 million a week.

The figure is 14 million higher than last year and beats the previous record of 153 million listeners in 2001.

The rise came despite the BBC axing 10 foreign language radio services last year, mostly in eastern Europe.

BBC World Service director Nigel Chapman said the figures were an "outstanding achievement" in a fiercely competitive industry.

The World Service broadcasts in more than 30 languages and is undergoing change as it moves from using old transmitters to FM stations and the internet.

The number of people listening in English has risen by three million to 42 million a week, according to the figures from independent surveys.

The BBC's British Affairs correspondent Stephen Evans says that is partly because the BBC is now broadcast by other FM radio stations around the world.

Mr Chapman said it was also because people turned to the BBC as a trusted service, particularly in trouble spots.

He said the figures were a "strong and welcome indication that we are not only strengthening our impact in priority areas but are flourishing in the multimedia age".

Areas showing a particular increase included Nigeria, Indonesia, Kenya, India and Nepal.

Two countries showing big falls were Pakistan and Bangladesh. Audiences in the latter fell by 4.4 million to 8.6 million in the last year.

The BBC said the losses were due to lack of FM frequencies.

Last October the BBC announced the closure of its Bulgarian, Croatian, Czech, Greek, Hungarian, Kazakh, Polish, Slovak, Slovene and Thai services.

The money saved is to fund an Arabic TV news channel, to be launched next year.

Smoke and mirrors like the Democrat governors of Arizona
and New Mexico have done. 10,000 will be used up as with any
army in support and will only be to assist checking of incoming
cargoes at the border and not for stopping immigration. And, severe
restrictions will probably be placed on the Army. Then too if the senate
legalizes them, who will be needed to stop them? If there are any
Americans still around they will probably have to defend the country
the same way as in the beginning of the country. Tancredo and Arpaio
for president!!!

Heard on the news this evening that the Guard bases don't want to send
troops to the border. They had a good point, too. The Guard is a
'volunteer' service in the sense that it's constituants have jobs in the
private sector, and cannot be pulled away from those jobs for extended
periods barring a national emergency. Bush will be hard pressed to come up
with enough reason to pull thousands of people off their private sector jobs
for extended periods of time.

With the stroke of his pen, Bush could federalize the Guard and they would have to serve on the border if they like it or not. But pussy Bush won't do that, you'll see. This is all just a dog and pony show.

Actually not.. they already have an emlistment problem.
And many National Guardsmen have already received legal
advice. Our state has challenged the right of the Federal
Government to utilize national Guard without it being a
congressionally declared war or disaster. The Feds used
our national guard to seize some Dinosaur bones from the
folks that had found them legally on and Indian Ranchers
land. The Indian fellow had given these folks permission
to own these bones. Our Governor and all pols went balli-
-stic over this and took the fucking Feds to court. The
Bones are now back in our state and donated to a Museum by
the rightful civilian owners. Our Guard cannot move under
any federal orders now until cleared by the Governor. Up
until 1954 the Guard was solely under the State. World war I
was fought by the rainbow division which was made up of
different states guards. 3 eastern states refused to send
their Guardsmen. That was totally legal and all other states
regretted that they allowed President Wilson to involve us
in a needless war. We have to remove our Gurad from the clutches
of the federal government. The only reason for our federal government
was to be for a common defense and a place to resolve differences
between the states. We also have to take our Senators off the
voting ballot and put them back to being appointed by the
Governor. Its the only way that our representation in Washington
is guaranteed to focus on the states needs. This was changed by the
Robber Barons, so that they could buy Senators.

I've been looking at the ARRL bulletins and spaceweather.com for what the cause is but don't see anything.

The bands at my QTH (mid-Atlantic US) were really really sucky this past weekend. Just a very few ham signals and the shortwave bands were nearly empty, even the normal powerhouses were just barely trickling in. Conditions for MW reception in the evening were awful too.

Local weather has had a long string of rain/thunderstorms that began about the same time as the bad propogation (Friday night/Saturday morning).

Tim.

Bush does not care about you guys in the trailer parks having tantrums.
The move to put troops on the border comes only a couple of weeks
after Mexico moved to decriminalize drugs. It is a warning to Mexico
not to even try it. You see, in the oo-ess too many folks depend on
keeping the war on drugs going: Chase and Bank of America willingly
launder billions of the cartel's money; there is a whole law
enforcement infrastructure that would be thrown out of work if drugs
were decriminalized in the oo-ess; then there are all the prison
contractors; finally, all your policemen and politicians receive hefty
bribes from the cartels to permit the ongoing sale and distribution of
drugs. The oo-ess government perceived Mexico decriminalizing drugs as
the first falling domino. Next your potheads will start claiming to
decriminalize mariguana in your own country. What will be next? If
anything, Bush's moving troops to the border is a concession to the
extreme fascists in his party so that he can get his guest worker
program going. So, you see, that is Bush's ultimate goal plus keeping
the drug war going.

Technical term meaning "don't even try listening to anything at all
'cause you won't hear it" :-).

Powerhouse SW stations that normally boom in up and down the East Coast
were marginal at best. (e.g. Radio Havana, Radio Canada.) At night
nothing except locals to be heard on MW (when usually I can get many
NYC, upstate NY, Canadian, Florida stations.)

That may be true about a lot of sets with mediocre front ends and terrible
selectivity etc.. but there were some very good single conversion sets made
over the years, especially during the mid thirties until after the war.
There's allot of ways to skin a cat when it comes to receiver design.

> I don't believe it. Since when does Bush give a shit about the invasion
> of the USA by Mexico? This has to be just a political ploy to to
> improve his poll numbers. I betcha it's not 10,000 troops all at once.
> He's probably planning to send one soldier per day, on a 1-day
> assignment, over the next 27 years.
>
>

Well... it's going to be a LOT less than 10,000 and it's only going to be
temporary...

It's just something to distract the rightard droolers, just like you would
give a 2 year old a squeeky toy, so georgie and the GOP can slip their
Amnesty/Guest worker program through...

georgie and the GOP will f**k the rightard cretins over AGAIN and they
won't even know it.... rotfl...

Phoenix has no real clear channel station. They have one 50 KW (days)
station. They have 3 regional stations with decent signals but the
rest of MW in Phoenix sucks.

You are fucking bonkers.

4942. Only $3 For Clock Movements Set

Quartz AA Clock Movements Set With Poiters.

The movement is approximately 2 1/8 " x 2 1/8" x 1/2"

Which makes it suitable for a wide variety of clock styles.

Items Price : $3

See the picture at http://mostz.com/clock

Each complete kit includes everything you need to finish your project.

Good to know that it has Poiters instead of hands.

In the unlikely instance that I was in the market for a fit-up quartz movement for an old clock I would undoubtedly turn to a parts supplier such as S. LaRose that I had done business with in the past.

"The Guard is a 'volunteer' service in the sense that it's constituants have jobs in the
private sector, and cannot be pulled away from those jobs for extended periods barring a national emergency. Bush will be hard pressed to come up
with enough reason to pull thousands of people off their private sector jobs
for extended periods of time."

Try 'national emergency' which the invasion certainly is---especially when considering that plain-clothes federales have been entering also since at least Hurricane Andrew.

Meanwhile, your point that the Guard is a "volunteer service in the sense..." does not exonerate them from the duty. If any thought they could simply draw pay and not serve, it's their tough luck.

4958. Re: The FRG-7 is really not that great,,, here are the facts

Newsgroup: rec.radio.shortwave
Date: 2006-05-15 16:03:52 UTC
From: "John S." <hjsjms@cs.com>
Message-ID: <1147709032.871441.103010@j55g2000cwa.googlegroups.com>
Source record: 74216

I think most of us would agree that the FRG-7 when introduced in 1976 was a respectable receiver that was capable of very good performance with controlled drift and reasonably accurate frequency display. It could and did allow many SWL's to catch a lot of stations and it was good enough that a whole cottage industry popped up to offer the inevitable improvements to a very good basic platform.

However, receiver design has improved a lot over three decades and the FRG-7's age shows when compared to more updated designs from Yaesu, Kenwood, etc. Still, in the hands of a competent SWL who knows the bands and and his equipment it can be counted on to deliver a lot of stations if the swl is willing to live without many modern features.

Like many of us, I enjoy using a receiver from years past. It's fun to spin the knobs and dial up stations on some classic like a Kendood R300, Yaesu FRG7, Realistic DX150B or even a National HRO500 or Hammarlund 180. It's always fun, but after a while it becomes clear that such receivers are also fine benchmarks from which to measure how far receiver technology has advanced.

It proves very little in 2006 to run some kind of a plus/minus scoring system using reams of dated statistics on an even older receiver design. Most of us have dog-eared copies of Lichte's books, have read the Sherwood tables and generally know all the conclusions about this and other classic receivers by heart. It's worth repeating that a good SWL who knows the bands and conditions and has optimized his equipment could undoubtedly pull in a lot more stations with a FRG-7 than the average knob-twister with his latest high-tech multi-screen digital wunder-receiver.

By now, we know you have a lot of receivers on your collection and have access to lots of statistical information. Instead of continually beating up on old designs like the FRG-7 why not back off and enjoy the old stuff for what it is and enjoy the newer stuff at the same time.

I did not have a chance to listen to the short wave radio this weekend
but looking back at the Space weather warnings I don't see a problem
that occurred over the weekend. Chances are your reception problems all
stemmed from the electrical storms in your area playing havoc with the
AGC desensitizing the radio.

It is like that here too with Radio Australia. Funny how some things are
equal across the coasts and others are not. I could probably count the
number of pirates I've heard in the last 5 years on one hand. Of course,
they're all from back there towards the east coast...

Are you nuts?

The clear channel stations (Clear Channel, with caps, is a company) are local stations in all but hours of darkness. In other words, they simply use the 50 kw to get a solid signal over their metro area and a bit of surrounding territory, but they are not daytime monsters.

At night, nearly nobody listens to AM radio. Maybe 2% of the population. So the times when a clear gets some additional coverage, there is nobody listening. It is hard to even give away 7 to midnight ad time.

Radio is a local medium. There is no gain from having audience outside the metro at all. Each station sells its local broadcasts to local advertisers or national ones buying on a market by market basis. 60% of all 12+ US population is in the top 50 metro areas, so there is not much interest in anything else.

And what frequencies would you put the SW broadcasts on? Although there are a lot fewer SW station on the longer wavebands, there is still a lot of interference... and 5 kw is not much, unless you propose using the tropical band.

Well, look at what he did with Iraq - what are USA National Guard
troops doing in another country?

In fact, while I don't agree with Bush's policy; National Guards at the
border are more of an appropriate use for these troops than sending
them overseas.

If you think that Limey is a perjorative term, fine with me. I don't need some dork in the UK telling me how to pepare for a hurricane, so far I have survived all that have struck my house which was built in 1968. I lost a few shingles and a tree. But, I'm smart enough to live on high ground in a sheltered area away from the waterfront areas. Many weren't and paid dearly.

I might live on the Mississippi Gulf Coast, but was born and raised in Duluth, Minnesota. I moved here to take a job with the Federal Government and have since retired.

Redneck??

Yeah right, retard!

Seek help David, you certainly could use someone with knowledge of mental problems to see if your meds could be adjusted.

[quote]You mean the 12 MHz, 13MHz and 15 MHz etc. bands, don't you?
Nobody
(except a few dinosaurs) uses the old wavelength designations.[/quote]

Uhhh *raises hands* All my analog-tuned shortwave radios are still
calibrated in Meters - even the new ones.

Makes tuning much easier when someone says "such and such freq. on the
31 meter band" - spin the knob to 31, rock the fine-tuning knob back
and forth. Bingo. Station tuned in.

That's how I spent most of my misguided childhood.

And then my uncle loaned and later gave me his Transoceanic with
band-spread, figuring I could get much more enjoyment out of it. Now
THAT was bliss! :)

And the wave band switch was still calibrated in meters! So THERE.

Wasn't this supposed to be the idea behind the high-powered stations?

National full-service coverage?

I believe each city should be limited to maximum six or eight MW
stations.

Two high powered 50 kilowatt stations, the rest would be 10,000 or
lower local/regional channels.

In addition, the LW band and the "Tropical" part of the SW band should
be pressed into service for one or two 500,000 watt national coverage
broadcasters - government sponsored (NPR?)

Want specialist programming? That's what FM is for.

JYAM,

I own several General Electric World Monitor Model 7-2990A
Radios and all but one have the Tuning Gear Bump.

This problem "Bump" is a Manufacturing Defect caused by
having to tight of a Pinch-Fit between the Metal Shaft's OD
and the Nylon Gear's ID - plus the type of Greese that was
used on an about the Gears may have also contributed to
the defect. Over Time the Plastic Gear just splits on the
Shaft and the Bump begins as you turn the Tuning Knob.

While the General Electric World Monitor Model 7-2990A
Radio 'looks nice' the the Panasonic RF-2800, RF2900
and RF2600 were {are} better performing Radios.

GE World Monitor Model #7-2990
* Small Short 5"-6" Ferrite Rod Antenna.
* Small 1.5" Square Variable Tuning Capacitor

I remember Sony selling a similar unit back in the late 1990s (around 1998). Only saw them for about a year. They were pretty much the same size and colour, difference was where the crank was located.

On the old model, it was located on the front. Sold for about 40 dollars. Bit too rich for me at the time.

>
> National full-service coverage?

Theat was the idea, back in the 30's. Of course, that was pre-TV. Then, the bulk of radio listening was in the home at night.

Today, the bulk of listening is in the car or at work (two thirds of all listening) and in the daytime. Night listening is one third of daytime levels (7 to midnight) and AM night listening is very limited.
>
> I believe each city should be limited to maximum six or eight MW
> stations.

The model in the US has always been based on whatever would work tecnically. Unfortunately, between a half and two-thirds of metro area AMs are inadequate to cover the market they serve, as they were either designed in the 30's or 40's before urban sprawl, or they are daytimers or showehorned in directional monsters.

There are some markets, like Washington, DC, that do not have a single full market coverage AM.
>
> Two high powered 50 kilowatt stations, the rest would be 10,000 or
> lower local/regional channels.

In many markets, 10 kw is not enough to cover the market without being trashed by manmade noise. Also, the relationship has to considder that low band AMs cover much better than high band... a 5 kw on 550 outcovers vastly a 50 kw on 1500.
>

Nobody would put up with the fading and static and interference on a national Am today. This is not the 30's. And younger, under 35 listeners, have no use fo rhte sound quality of the AM band.

You are referring to daytime reception only?

Considering daytime ground wave propagation, is the difference in
coverage low to high band due to ground conductivity where the high end
of the band has more loss per mile?

> You are referring to daytime reception only?

Yes. In the US, there are so few stations that have any extended night coverage as to make the point moot for all but maybe 30 or 40 stations in the whole nation that can get usable skywave coverage. In any event, night AM listening is so low that it is irrelevanat, irrespective of coverage.
>
> Considering daytime ground wave propagation, is the difference in
> coverage low to high band due to ground conductivity where the high end
> of the band has more loss per mile?

Given the same transmitter site, and same radiation efficiency, the difference is that medium wave signals propagate better watt for watt on the lower frequencies. Ground conductivity decreases as a function of frequency. This is why the old adage that 1 kw on 1540 covers better than 50 kw on 1600 is nearly true.

> it!!!

No, Lardass, you couldn't find a car big enough to hide your fat queer ass. You'd rather hide behinde your HUD apartment door and whine "leave me alone" like you did when Oris stopped by.

This was e-mailed to me this morning by Oris Grimm an old friend.

I happened to be traveling through Huntsville, Alabama early this morning, I deceided to stop in Athens and see just how tough Lloyd Davies was going to act when he saw me in person.

Many of you know that a few years ago, Lloyd got smart with several people in the Deja Newsgroup (now Google) and I issued a challenge to him. I told him I would be attending the Dalton, Ga. Hamfest if he wanted to continue the conversation. He said he would be there and he was going to kick my ass.

Well, Lloyd was a no-show and continued the verbal assault on the newsgroups. He always talks tough behind his keyboard. And, I understand he is now doing the same sort of thing on the NIM Busters Board.

Well, about 8.35 this morning (December 23, 2004) I located his apartment in a nasty looking section of town. I'm a pretty good sized man, but I put my gun in my back waistband after exiting the car. I located his apartment and knocked on the door. The doorbell was missing and bare wires were sticking out of the wall. I heard someone say I'm coming and shortly the door opened with a safety chain lock still engaged. He asked what I wanted and I introduced myself and asked if we could have a conversation. He turned white as a sheet and attempted to slam the door, but I already had a foot wedged in the opening. He started shaking uncontrollably and was shouting leave me alone, leave me alone! I told him he didn't seem so tough now face to face and then noticed a putrid odor of urine and he was pissing his pants and crying like a baby. Please leave me alone Oris he said, I was just having fun and meant no harm, please leave, please. I could see the filthy floor of this apartment and the dirty floors and the stench of a grown man pissing on himself were almost enough to make me want to vomit, and I don't have a queasy stomach. Upon telling him that this time he would escape a ass kicking and not to ever get a smart mouth with me again and a verbal yes from him, I departed. That apartment complex looked

like a crackhouse, niggers everywhere, filthy grounds and stairwells. Junk cars everywhere and garbage overflowing the garbage cans.

This Lloyd is nothing more than white trash that delivers pizzas and could afford to take a trip out of town if the ticket cost $5.00.

I'm sending this to a friend who despises Lloyd Davies and he wanted to post it for everyone to see just what kind of chickenshit asshole this Davies really is.

Oris Grimm

Yes, this is exactly what happened to mine and you described the
problem precisely. Certainly, the Panasonic is a much better radio.
However, I would like to get this one repaired so I could at least sell
it on ebay. There is one on ebay now that the owner said also had a
broken gear, but he got it repaired before putting it on ebay. I'll
check into the hobby shops locally. Otherwise, I guess I'll just give
up.

4990. A "Final Solution" To The Illegal Alien Problem

Newsgroup: rec.radio.shortwave
Date: 2006-05-15 18:36:00 UTC
From: NewsGuy <NewsGuy2005@gmail.com>
Message-ID: <1147718160.822134.38890@j33g2000cwa.googlegroups.com>
Source record: 74246

Frank applauds the Minutemen in their march on Washington, arguing that they are not so much against illegal invaders, but are against crime.

Frank then proposes his own "final solution" to the illegal alien problem - chip implantation for anyone who comes into America on a visa. The chip will send out a signal out to immigration authorities once the person's visa expires, allowing for easy tracking and expelling of the violator from America. If this chip were removed from the visa holder before its expiration, another signal would be sent to authorities noting abuse of the system.

Frank also calls for the deportation of Americans who want to play Political Hackey Sack with Iran. If you're that stupid, if you're that naiive to feel sorry for Iran and portray that country as a victim, you have no right to call yourself an American. Frank bases this on the closing words of Iranian President's letter to Bush, where he writes, "Peace be upon those who follow the true path".

Also, the Roman origins of Patrick Kennedy's excuse for speeding... how Clinton originated Project Eccellon... prediction for Bush's speech on Monday... your phone calls and more at 718-761-9996.

Haven't listened to R. Australia in years. May have to for old times sake. They were the first SW station I ever heard. Listened on an old Packard Bell console radio. Tuned 5.5-18 Mcs. Antenna was about 50-75 feet of wire looped around the ceiling of my room. Ground was in the bathroom next to my bedroom. Radio had an eye tube (?), greenish thing that acted like an s-meter, closed more and more as the station got stronger. R.Australia actually over lapped the eye tube. As a 14 year old back in (mumble, mumble), it was so exciting to hear a station that far away. Also heard R. Japan, BBC, R. Moscow, HCJB, all in the same evening. Too bad about HCJB closing it's English (all SW?) service(s). Haven't listened to them in awhile either.....

Sorry this was long, got carried away, Eric

On analog radios, look by the band switch indicator. You'll see them.

Ditto on ghetto blasters, look underneath the frequency numbers - 120
M, 90 M, 75 M, etc.

I'm looking at mine at work right now - a JVC from Singapore (from like
the early-mid 1990s). Unfortunately I can only pick up local FM in
this office building.

A delightfully refreshing island of good sense, here.

Nicely said.

Why give such valuable spectrum to the billionaire corporations who already have things locked up on all the other bands?

Better for shortwave listeners, I think, would be to allow minimally-regulated low-power broadcasting on a band which is virtually empty during the daylight hours but which would allow coverage of several hundred miles with 1 kilowatt or less: 49 meters. The US could be divided into four geographic zones, perhaps approximating the time zones, and in each zone there would be room for 45 or so 10-kHz-spaced AM stations. Stations in adjacent zones would be offset 5 kHz from each other to minimize interference. (Eastern zone stations would be on, say, 5900, 5910, 5920, et cetera; while Midwest zone stations would be on 5905, 5915, 5925 and so on.)

This would allow about 180 stations nationwide. If Alaska and Hawaii were considered their own zones, it would allow 270.

Stations would have to restrict broadcasting time to daylight hours, perhaps even keeping an hour or two away from local sunrise and sunset times, to avoid interfering with existing international broadcasters. Frequencies used by Canadian daytime 49 meter stations could be protected. And no corporation, or any person having an interest in any other broadcast property, could own such a station -- individual small operators only.

With all good wishes,

--

Kevin Alfred Strom.

You might want to follow the thread a bit closer, loser. I was
referring to the original poster, Terry who is in the UK. David said I
shouldn't call him a Limey.

You sure are living up to the name Lloyd. I know you aren't Lloyd
Davies, probably his namesake though.

I don't give two shits about where he posts from, Lloyd. You seem to be
able to sniff out faggots. Birds of a feather?

Les

Nice troll. (...worthy of the late Polly from 14.313)

It would never REALLY happen you know.

If hams were ever forced to re-test when their license
was up for renewal, no doubt WHATSOEVER in my
mind that 75% would drop out from Ham radio.

Even the guys on 10 Meter FM working Repeaters and
28.600 simplex what scanner listeners and SWL's monitors
tune into would dry up overnight.

Apart from that ARRL only represents 20% of all
USA at best. Most people know that they are nothing more
than a publishing house which landed a 501C-3 Tax free
status via claiming to be a technical resource and training
NGO org. What a load of sheer bullshi++ery.

Arrl could go belly up tomorrow and it wouldn't
be worth a cup of coffee with Habib Patel at
the local Dunkin Donuts.

The National Guard will NOT have the power of enforcement.
They will not be able to arrest, hold, or transport any illegal, they
can only wave as they walk on by! They will be doing the same
job that the Minuteman is doing so well. This is not securing the border
in any way, because there is not enough Border Patrol to respond
to all the sightings of illegals now! What good is this going to do?
Bush is playing the American public for stupid AGAIN!
The Gaurd is stressed enough allready with fighting a war that should
be fought by the regular Army, the Gaurd should not be over in
Iraq anyway. Bush is trying to fool the public that he is doing somthing
to secure the border so he can pass his amnisty bill, at the expence
of the National Guard, and the American Public.

I am fixin to put my dog in the hall and close the door and step next door and see if that Bell South woman is through with my lawn mower.I left the door to my big old 1976 Chevrolet ex-bread truck van in my back yard unlocked and I want to skid my lawn mower back up in there.Regardless,I reckon I ought to lock that old ex-bread truck (full of junk) up anyway.

Just ignore him and don't give him any lip, dumbass. If you quit
replying and provoking him, he would quickly drop the whole thing.

There is no "challenged" question at all. You are using that as
an excuse for yourself.

5077. Re: The FRG-7 is really not that great,,, here are the facts

Newsgroup: rec.radio.shortwave
Date: 2006-05-16 00:43:05 UTC
From: mike maghakian <maghakian@comcast.net>
Message-ID: <xdadnaQv6auAvfTZnZ2dnUVZ_vWdnZ2d@comcast.com>
Source record: 74284

I guess I should have explained why I made this post as peoples responses
have not been in tune with what I was trying to accomplish.

Too many people have been pushing the FRG7 as this fantastic can't go wrong
receiver and people new to the hobby or those not knowing what to get, end
up getting an FRG-7 overpaying, and thinking it is this fantastic receiver,
the best since Armstrong invented the superhet. Well they are mistaken,
having been mislead as to what the best receiver for them would be. A
newcomer should not start off with an FRG-7, as simple as that. I want
inexperienced people not to think the 7 is the best they could do.
A newcomer should not have to cope with analog readout and fair selectivity
(among other shortcomings) in their main receiver when for a few dollars
more they can get a used satellit 800 (fairly easy to get for $300 to $320,
tested with warranty) that is an awesome receiver for most people. It is one
of my TWO main receivers (+Lowe HF-225).

Australia can be easy or hard depending on time of day and frequency.

My location on the west coast usually means Radio Japan has a very good
signal unless the propagation is kinda um... sucky.

Every time I used meter band indication I got complaints from other
posters on the news group. People wold rather you stated the frequency
so I post 15 MHz band instead of 19 meters. I don't think anyone would
complain if you stated both.

What I find interesting about Radio Australia (really ABC, right?) is
how similar their news is to that in the US. Only the names are
different. We had MZM and the Duke-stir, and they spent months talking
about AWB.

If you search around the FCC website, you can often find filings from stations that no longer are licensed. That is, the FCC maintains the old correspondence. I often find the records for companies that are still operating but don't bother to stay licensed.

I liked Monitor Radio. I know zip about the Christian Scientists, but I thought their news was more fair and balanced than you know who!

5088. A "Final Solution" To The Illegal Alien Problem

Newsgroup: rec.radio.shortwave
Date: 2006-05-16 01:14:04 UTC
From: NewsGuy <NewsGuy2005@gmail.com>
Message-ID: <1147742044.873047.168760@g10g2000cwb.googlegroups.com>
Source record: 74295

Frank applauds the Minutemen in their march on Washington, arguing that they are not so much against illegal invaders, but are against crime.

Frank then proposes his own "final solution" to the illegal alien problem - chip implantation for anyone who comes into America on a visa. The chip will send out a signal out to immigration authorities once the person's visa expires, allowing for easy tracking and expelling of the violator from America. If this chip were removed from the visa holder before its expiration, another signal would be sent to authorities noting abuse of the system.

Frank also calls for the deportation of Americans who want to play Political Hackey Sack with Iran. If you're that stupid, if you're that naiive to feel sorry for Iran and portray that country as a victim, you have no right to call yourself an American. Frank bases this on the closing words of Iranian President's letter to Bush, where he writes, "Peace be upon those who follow the true path".

Also, the Roman origins of Patrick Kennedy's excuse for speeding... how Clinton originated Project Eccellon... prediction for Bush's speech on Monday... your phone calls and more at 718-761-9996.

A germanium diode is much easier to use than a rusty razor blade and needle. We were lucky to get even the blade for our homemade, secret sets. The American death camps in the early part of the Twenty First century were no picnic and the one percent who survived were all mutilated beyond repair. I'm one of the lucky ones. I still have half a hand left and one eye. The Civil War still rages outside. We hope to retake Washington next year, in 2012, to reinstate the Constitution and Bill of Rights. May God help us defeat these unearthly vermin.

I assume you meant 540, not 1540.

I think it would be cool to have long wave (LW) broadcasters in the
USA. Ten 2 megawatt stations, on 10 frequencies, evenly spaced across
the country would cover the entire lower 48 day and night. It won't
happen, of course, because nobody owns radios that cover LW besides
radio nerds like us.

OLITICS OF DECEPTION (Crown Publishers, October 2003)--a steely and
scathing indictment of the president and his advisers--David Corn, the
Washington editor of The Nation and a Fox News Channel contributor,
reveals and examines the deceptions at the heart of the Bush presidency.
In a stunning piece of journalism, he details and substantiates the
all-too many times Bush and his aides have knowingly misled the American
public to advance their own interests and agenda.

...that is to say, books have been written abut Bush's lies.

Greg

Uh huh, like Michael Moore's. Sorry, but it's been going on for too many
years now for me to be subsidizing liberals by buying their imaginative
fantasies. I have no reason to believe it's anything more than more
repetition of the same lies.

The so-called penalty is less than one percent of what all too many
illegals have profited by their lawbreaking. It's nothing more than a
smokescreen, a thin veneer disguise for amnesty.

And of course the Bell & Howell $10 radio, which is a more modern design
than all of the RS radios mentioned, must be the most sensitive of the
four.

Thats a quite good assessment of the situation. Don't you find it funny
that it has taken him several years to do something about the illegal
immigration problem. Why aren't the phony conservatives talking about that?

I say that when a man allows the illegal immigration of people into this country yet does nothing about the borders, that would be grounds for impeachment.

Of course, in your messed up worldview everyone is a socialist. The lies are piling up on your master. He tells one lie and another to cover another. A bit of analysis and research and might learn something. But then again, I suspect you're pretty much lacking the ability to analyze information.

Now if that was the case, why hasn't Syria been fingered or accused of such? You sure don't hear about it in the press or even the foreign press. Are you so ignorant to believe that the US wouldn't raise hell about the WMDs being moved to Syria or Iran. Another thing, why smear Valerie Plame if that was true about the WMDs.

I there might be a relay of Japan but it is direct whenever I check it
on the schedule. Maybe you are thinking of Taiwan. You can get it direct
or relayed from Canada depending when you listen.

He's indignant when someone imposters him, but he thinks it's a-OK
when he imposters W4FQF over in alt.radio.scanner.flame_fest. What
goes around comes around, Les baby.

It couldn't happen to a more deserving guy.

5152. Realistic 12-655

Newsgroup: rec.radio.shortwave
Date: 2006-05-16 11:10:30 UTC
From: Wulf <racemi@yahoo.com>
Message-ID: <1147777830.821581.90070@j73g2000cwa.googlegroups.com>
Source record: 74409

Hello,

Well I finally found a Realistic 12-655 TRF AM radio.

This is the one I've been hearing about all these years as a great DX
for MW.

It is very good, but I'll bet it could be a little better with one of
the mods that people have found over the years.

Anyone out there have any mods for this radio?

I've searched here and the rest of the web and found a couple of mods
so far.

I can't seem to find an "archive" of mods thought.

Anything will be greatly appriciated!

Thanks!

Wulf

I can hear their broadcast direct here in English on 9695 and 11730 at 1130,
though the relay on 6120 is much better.

My two powerhouse stations here are R. Japan and R. China Int. I can hear
either of them on even the most rudimentary SW receiver, esp. on 41m., with
no antenna connected at all.

Congrats! The TRF was one of those grail radios that I had heard about but have never seen in person. Dates to 1977 maybe? It seems to rank up there with the GE Superradio(s) as a receiver that delivers very good performance from a radio with minimal controls with a reasonable price.

A google search returned several interesting links that discuss the radio: http://www.radiointel.com/review-mwolympics.htm
http://dxtools.com/BestDXrx.htm
http://www.geocities.com/amlogbook/newmembers/reprint.htm (mods here)

You might try a variety of google searches for the radio and read through the information in greater detail.

So how does it perform now, with no mods. And what does this mythical radio look like anyway.

Don't give up so soon...it's a challenge to be overcome!!! FWIW, I acquired a Realistic DX150b from an estate sale and went through a definite learning curve too. I never bothered with setting up a log scale, but did use bandspread for ham signals. Take a little time in learning to use bandspread tuning, but also realize that feature isn't really needed for AM listening. Just use main tuning for AM signals. Play with ham signals on 80 meters at night to get the hang of the bandspread dial.

It works and once you get the hang of it bandspread it is fun. By design you have to slow down with these analog designs, and sometimes that's a good thing because it forces you to stop and listen before moving on. Although, after a couple of hours of tuning around with an oldie I'm ready for the simplicity and speed of point-and-shoot tuning on our modern digital wonder boxes.

I'm looking for a downloadable (pdf) copy
of the Realistuc DX-302 receiver. I've
searched vus Google and
the Yahoo Group and haven't found anything. If someone
could provide mewith a link or even email a copy
directly to me, I'd apprecitate it.

Thanks
Charlie

I guess it has to do with what you've gotten used to.

See, I grew up listening to SW stations on ghettoblaster (jam box)
radio/cassette units. So I got used to spinning the regular knob until
you reach the desired wave band, then diddling the fine-tuning knob to
zero in on the frequency.

And that's how I think. Meter band and then that particular frequency
within that band.

Stephanie

I've used them both, and would agree with most others - the FRG-7 would be the overwhelming choice. For the FRG-7 I find the audio to be much easier on the ears, the controls to be laid out for long term use and control operation to be less fiddly.

That's how hams do it. And R. Moscow never gave frequencies, just
meter bands. In the age of the digital readouts you have to divide
the meter band into 300 to figure out what people are talking about,
unless you have that shit memorized (which I refuse to do).

The 302 is really not a bad looking radio in my opinion. At first
glance I thought it was designed in the 1960's and half expected the
digital dsplay to use nixie tubes.

if it only has 18 teeth i wouldnt be afraid to try to fabricate one with a set of jewelers files. radioshack used to have the small file set. or maybe a ruber wheel to replace the gear? like a kind of friction drive? it depends on how desperate you are to get it fixed. if i wanted to keep it then you can bet i would file one myself. but repairing to sell on ebay it would set a LONG time on the shelf before i got around to it. how much would this radio go for if it were fixed? i have to think that you have things backwards, screw ebay! i would be wanting to play with the radio!

DAMN! why am i still thinking about your gear? ok, look. what about this. get that sliver of soap that is in your shower, the little thin one that you dont want to use any more. press your gear into it to make a mold. mix up some epoxy glue and cast the gear. when it has set wash the soap away leaving the casting. true it up on the non-molded side by circling it around on a piece of fine sandpaper laid flat on the table. when the dimension is good and flat it should be a better and more durable part than the original! its a little work, but this is a hobby isnt it?

So you admit to having a perverted fetish and you DARE call Steve the pervert? Oh, how mentally deranged you are, Markie. Just goes to show you have bankrupt values, I bet you're a liberal and a Democrat, too.

> does not alter the fact you need menatl help wismen
^^

Wrong guess and wrong again, pervert, you need "mental help" for wasting beer like that. And just on general purposes, you illiterate retard.

Is there any group that considers what a fat, misguided imbecile
like you, posts as relevant? I think not, idiot blubber boy, the only
place for a silly
bastard like you is alt.obese.mongloids or
alt.homosexual.obese.mongloids.
Anything else would be too intellectually challenging for a dolt like
you.

I see the Bush supporters web sites as being supported by peoplle with
vested interests in his trashing of the EPA, OSHA, etc., and
elimininating in general regulation of big business, whereas the loyal
opposition seems to be motivated more altruistically.

You're more likely to get struck by lightning than injured in a
terrorism incident.

Bush's environmental policies kill 10,000 people a year, easy.

Our lack of Universal health care kills at least 18,000 people a year.

Because you're afraid of a largely invented threat you ignore the
really important stuff.

Is that who he blamed that act of cowardice on?

Always somebody else's fault, like when he blamed the ''Mission
Accomplished'' banner on the brave crew of the Abraham Lincoln,
fucking' asshole.

It ain't gonna happen...Someone in the border states will fire the first
shot. More then likely Texas. Bush was pretty fucking hyped up
when Governor to execute and give long long terms to criminals
in Texas...And now the SOB is licking Mexican Illegals ass!
I bet Echelon is smoking right now from all the antiBush Rhetoric. ;-p

what part of the contitution are you refing to?

search and seizeure is forbidden nothing forvid them from looking
around

if that were forbidden then speeding laws culd never be enforced

5286. Almost an Eton E10 Gloat !

Newsgroup: rec.radio.shortwave
Date: 2006-05-16 22:35:01 UTC
From: gosmithwhisper@yahoo.com
Message-ID: <1147818900.865007.259090@j33g2000cwa.googlegroups.com>
Source record: 74495

Stopped by RS today and they had the E10 on sale for $49.97. Just
as the article I posted about sleazy Eton/Grundig/Tecsun said, the
markup
on SW radios is incredible (E10 retails for $120). At $50, RS is STILL
making a profit ! I bought one (was going to buy two, to have one
new-in-the-box, forever), but when I got it home, the plastic display
cover had a blemish; of course, the RS salesman lied to me and said
that it was new-in-the-box - RS is just as sleazy as
Eton/Grundig/Tecsun !
Maybe it turned out for the best, because the tuning knob felt, as if
it was
goint to fall off, and the buttons were so small, as to be too
annoying.
Also, with the continued demise of SW, what in the Hell was I thinking
!

Who was that guy, who spent $150 on a RS Eton E5 (from E5 gloat) ?

What's "ture", you illiterate pervert?

--
Let's listen now
to one of the voices in this utterly clueless fuckwit's tiny brain, as
we all wish for the 100th time that The Thing responsible for Roger's
birth had practiced abortion and that Roger hand landed with a splash
and a thump in the toilet of some anonymous Greyhound Bus station
rest-room way back in 1955.
CQ Contest?

Since you do not have access to Radio Shack cost information nor do you know how direct and indirect overhead is allocated within the RS system, what is the basis for this "fact".

Assuming this really happened, which I seriously doubt. Is your idea of entertainment stopping by a radio shack store to look over in great detail and buy a radio that you thoroughly detest? You have odd ways of keeping your self entertained. The welfare check must have come today.

More modern doesn't necessarily mean more sensitive. A Grundig FR200 is
more modern than a JRC NRD-535; which would you pick for sensitivity?
Which do you suppose Joe A would pick?

Exactly! And since the Shrubery needs all the help he can get the
administration would have shown such photos by now. The sanctions worked
well.

I've never heard of any senior software engineers, in the Intelligence
Community, having to take welfare. Anyway, I saw a review of the Eton
E5, I believe on RadioIntel.com, and it looked like almost an exact
match (same side switches and case), as the Degen 1103. I am curious,
why anyone would spend $150 for a RS E5, when they could get the
Degen for $65 delivered ?

I had a DX-160 as my first upgrade from an old multi-band portable many years ago. Except for the drift, it was actually a decent radio, but I understand what you mean about the bandspread. If the bandspread dial was for the international broadcast bands instead of the ham bands it would've been very nice.

Later on I did get a radio which seemed similar except that it had a bandspread that did have the broadcast frequencies as well as the ham bands. It was an old tube receiver from National, the NC-190. Overall I found it to be a better radio than the DX-160. I'm still kicking myself for selling it. I believe that the NC-140 also had that bandspread arrangement.

Why would a senior software engineer, in the "Intelligence Community" buy what
they've already said was a bad piece of equipment to begin with?

altruistly? prehaps but who are you calling the "loyal" opposition?

why should only Bush basher have freedom to pormote their agendas?

you call bush a fascist I frankly you are doing so while looking in the
mirror at your self

you staimpleied therewas no motive for bush bashing to lie I provided
one

there is ALWAYS motivation to lie

Right, you pull the bandspread knob out and turn it 180 degrees to change it
from sw to ham. It works real well. I have a 140. RM~

PS, also have a 160 and also feel that it's way over rated by some users.
Guess it's sort of like the old ford/chevy issue, depends on which one you
are driving as to which is best.

You obviously never heard WB4AIO's great sounding audio. As you well
know, many hams, and every broadcast station uses audio EQ and other
processing techniques to improve voice quality. So, like, what's your
beef?

> if you need EQ you don't have a voice.

So how's the brain EQ working out for you?

Maybe you have a better explanation for someone who goes out of his way
to waste money on a product he detests. I figured you got so excited
at the thought of the welfare check finally coming that you just had to
go out and buy something...anything. Judging from your previous posts
I doubt that you have anything to do with software engineering, senior
or junior, intelligent or otherwise.

That is a good way to think. Paying attention to wavelengths helps make
antenna and transmission line concepts more understandable when dealing
with real world three dimensional objects. Frequency is more convenient
to use in circuit analysis.

1. Okay.
2. The 535 was first sold in 1991. Yes, I believe the FR200 was designed
after that. If you know otherwise, please enlighten me.

You are speaking manufactured. I am speaking designed.

FR-200 single conversion analog radio ---------several decades old design
NRD-535 PLL receiver ------------------------possibly a little newer
design

John,

You asked how it performs without any mods...

While it is very good, at night when everything opens up and skip is in effect, I feel that it is almost too sensitive and not selective enough. Granted all sensetive radios will pick up so much you have to dig to listen to just one station, but this one I have does not impress me as much as I thought it would. The daytime reception is very good as I said before. I may attempt to adjust it, I have the schematic and the tools/knowledge.

I'de be happy to get into a disussion about the Linux/UNIX kernel -
you know, ioctl(), copyin(), copyout(), signal handlers and interrupt
routines, memory management (implemented as a linked list of malloc()
blocks), and security clearance levels, such as, Sensitive
Compartmented Information (SCI), etc...

5322. Extra Radio Netherlands Transmissions For Suriname

EXTRA RADIO NETHERLANDS TRANSMISSIONS FOR SURINAM

Due to the flooding in Surinam, Radio Netherlands has added some extra
shortwave transmissions relaying Radio Boskopoe, a local public radio
station in Totness, the capital of the Coronie district, that normally
broadcasts on FM. With the addition of shortwave frequencies, Radio
Boskopoe can reach the entire country. Programmes are in Dutch and
Sranan Tongo.

These extra broadcasts are scheduled as follows:
1359-1500 UT Bonaire 15540 kHz 133 degrees
2059-2157 UT Bonaire 15540 kHz 133 degrees
1015-1045 UT Bonaire 6020 kHz 110 degrees (an extension of the
regular 0930-1015 UTC transmission to the Caribbean).

Your writing gives the impression that you are trying to convince
yourself as much as others of your technical qualifications and links
to the Intelligence Community.

I think that it is safe to say that those with meaningful connections
to the Intelligence Community don't go bragging about them on Usenet
groups.

I wonder an external antenna with stronger nulls would help manage the
flood of signals you are experiencing. You might give that a try
before cracking the case on a 30 year old radio.

> "entiorely" West Virginia phonics again.

Wrong, dumbass, since I'm not from West Virginia, unemployed pizza BOY!

"breaddead" - LLoyd hasn't got anything upstairs in the oven
"defenseive" - Lardass is "defensive" of his ignorance
"counter-offenseive" - When LARDASS LLoyds attack
"nights" - Athens ASSHOLE was referring to last "night's"
masturbation session
"I forget to set the playlist in Winamp to repeat!" - Mongolloyd
also "forgets" the use of past tense, or maybe he just does as usual,
fucks up!
"Techincal" - Lloyd just hates those "technical" things
"Dalkes" - Lloyd's granddad remembers when movies became
"talkies" too bad LARDASS learned to Dalk <sic>
"That it!" - When Mongolloyds get real mad, they talk like Tor
Johnson
"Woger" - LARDASS closely identifies with Elmer Fudd with his
lack of hair and all, not to mention the same lisp!
"decide on weather or not" - It's always "stormy weather" with
Lloyd deciding "whether" or not to use correct English
"can not" - Mongolloyd is wondering how he "cannot" seem to get
ahead in life
"is'nt" - "Isn't" LARDASS cute when he is mad?
"PAINFULL" - How LARDASS' bathroom scale feels when he steps on
it in the morning, real "painful"
"I wish for Roger Wisemand" - Lloyd liked thosed thingd ford
Rogerd
"alot" - Davies dreams he can communicate in English a lot
"thier" - Lavender Lloyd sure does lisp after a night behind the
dumpster
"dont" - Lloyd says "dont", the rest of the world says "don't"
"Isreal" - Is FATASS Lloyd's retardation for real, or can he
blame Israel?
"juist jelous" "extermenate" - A three for one post Athens

Asshole axiom
"footting" - What LARDASS doesn't have, an equal "footing"
anywhere
"Cant" - Emmanuel?
"th" - When Lloyd gets nervous, he stutte, er stutters
"enfighting" - Lloyd's two brain cells are infighting for
control of his stupidity
"YOU STUPID JEW!" - Wasn't Jesus Jewish, so called Christian
LLoyd?
"Tonite" - There's nothing in Lloyd's brain "tonight" or any
night
"segmant" - What Lloyd's communications are, only sentence
"segments"
"I just listening" - Too bad he doesn't listen to his poor
English
"buffon" - The Athens, Alabama "buffoon" strikes again!
"museium" - Where LARDASS LLoyd keeps his "muse"
"nastey" - How everybody describes LARDASS' body stench,
especially in the ghetto
"loose" - Lloyd's description of his spinchter muscles...
"wont" - Lloyd refuses to learn English, it's Lloyd's "wont"
"awhile" - It will be "a while" before Davies gets a clue
"freinds" - Lloyd's conglomeration of "friends" and "fiends"
"thier" - "There" just isn't any hope for LARDASS Lloyd "ill-
educated" Davies
"backstabers" - Lloyd's version of the OJays' hit
"becuase" - Home of the "Deliverance Extras" spelling by LARDASS
Lloyd
"obselete" - What LARDASS thinking is to him, others see it as
'obsolete'.....
"belive" - What fools like LARDASS Lloyd "believes"
"thier" - Ill-educated Xtian LARDASS Lloyd shows off his
language skills!
"marshalls" - Mongolloyd spell "marshals" real good!
"Wisemand" - LARDASSd fucksd upd againd
"compay" - Mongolloyd never gets any female or insurance "compay,"
while
others do get "company"
" But when we are winning," DUMBFUCK, YOU have NEVER WON
anything in your miserable life!
"and do the nasty!" You don't really know what that means, do
you, 30 year old VIRGIN?
"It's does" - Mongolloyd use good English
"momnet" - LARDASS Lloyd Davies misses his dead "momnet" for a
"moment"
"seriuosly" - Lavender Lad President Mongolloyd wants to be
taken "seriously" instead of "seriuosly"
"annouced" - Mongolloyd "announces" his stupidity again
"tonite" - Davies never lets his lack of education stop him from
announcing to the world he's a fucking imbecile!

"nite" - When LARDASS Lloyd molests those kids he makes them say "nite, nite" at "night"
"weldare" - Calling Dr. Weldare, LARDASS needs his head out of his FATASS....put it on his welfare bill
"so fuck of" - When Mongolloyds who have man tits talk tough......
"fukcing funney" - Alabama deliverance extra Davies speak
"pictrue" - "Picture" yourself as a Davies Mongolloyd
"isseus" - Davies has "issues" too many to list here
"resortjng" - Is Lloyd from Finland?
"attsxks" - When LARDASS Davies "attacks" he uses illiteracy
"basturds"- What mental illness patient LARDASS Lloyd calls his nurses
"shkt" - Mongolloyd Davies' "Skittles", he likes that "Hershey rainbow"
"law suit" - LARDASS never leaves his HUD apartment with out his law suit
"opinionn" - When LARDASSn postsn whiln drunkn
"intrenet harrasssmint" - Tries to make LARDASS Lloyd's rotting teeth feel fresh
"sneeky" - The teachers always "sneaked" Lloyd through the next grade
"that' wasnet" - LLoyd was out that year of school that they went over English grammar
"idiout!" - "Lloyid" <sic> strikes out again!
"speling" - Mongolloyd Davies the "spelling" bee champ of the retards!
"reas isseus instaed" - Davies talking out of that cheap beer again
"atttacking" - LARDASS Lloyd stutters when he gets upset.....ttttt.....
"challegne" - When Mongolloyds drink and post
"metnal" - Mongolloyd just doesn't have the "mental" ability to debate......
"debste" - What Lloyd's mommy did to him in the bathtub
"cahllenge" - Mongolloyd speak for "call" and "challenge"
"basturds" - LLoyd ,Amanda's illegitimate "bastard" sure does have a scat fetish
"morsd" - Whend Daviesd drinkd andd postd
"wont" - It is Mongolloyd's "wont" to be stupid, "won't " you let him?
"youd" - Oops, LARDASS did it again!
"poinion" - Must be an Athens Alabama "Deliverance" thing
"Woger Wiseman"- LARDASS Lloyd's got that cocksucker's lisp
"isnt" - "Isn't" LARDASS cute when he slobbers incoherently?
"worfh" - Davies' cocksucking lisp has returned
"waset of spaceda" - When Lloyd's only friend Colt 45 malt liquor kicks in
"Oppulant" - The only thing "opulent" in LARDASS is that he is rich in ignorance

"obly" - LARDASS lisp from cocksucking shows when he tries to
say his favorite fag artist "Moby"
"wood" - LARDASS LLOYD'S head "would" be made of "wood"
"dserve" - LARDASS lives in that ghetto where they say he sure
does "dserve" those pizzas
"frum" - LARDASS LLOYD DAVIES wonders where his real father is
"from"
"DISCUST" - Mongolloyd Davies' command of the English language
is "disgusting"
"You worthless coward are scared of debating me." - Mongolloyd
make good sentence
"jellous" - Most of LARDASS Lloyd's cellulite body is "jealous"
of skinny, in shape people
"It just didn't wok out"
"wok out" - When LARDASS tried to stir fry those nutsacks for
pizza topping, Pappa John's terminated him saying he didn't
"work out".
"entact" - LARDASS' single brain cell isn't "intact" either.
"empahis" - Notice how LARDASS Lloyd's "emphasis" is always on
his fucking stupidity.
"Fuck all fo you" - Christian LARDASS Lloyd showing that Jesus
spirit.....
"bllod" - How LARDASS Lloyd spells "blood"
"did'nt" - LARDASS "didn't" do very well in school
"PLEASE by a clue" - LARDASS Lloyd's parents couldn't even "buy"
him an education
"extrodinare!" - LARDASS is a moron "Extraordinaire"
"unsubsribe" - Mongolloyd Davies "subscribes" to the theory that
ignorance is bliss...he must be in heaven
"Must've struck a cord" - LARDASS confuses his favorite sex
fetish of tying his penis with a
light cord and masturbating to the word "chord".
"dumass" - Dumbass Davies trips and falls in shit again.
"Them two bigtime losers!" - Mongolloyd mentally ill Davies
makes good sentence!
"straming" - Lardass usually has to wash his sheets from the
"stream" of piss when he wets the bed or not given his filthy HUD
apartment
"surpassinf" - LARDASS is always "surpassing" his previous
levels of stupidity.
"pleanty" - <guffaw!> "Plenty" of stupidity coming from LARDASS
Lloyd.
"Cause i'll have law lock you up and throw away the key!" -
Mongolloyd talk tough!
"pome" - When LARDASS WADSWORTHLESS Stubbyfellow writes a "poem"
"Once she here's my show" - Most people hears a show, LARDASS
"here's" them!
"forgotton" - LARDASS has "forgotten" what he was taught in
special Ed
"I want your seriousness" - LARDASS does his take on "I want

your sex"
"I did'nt ask for your fucking grammer checking!" - LARDASS
Lloyd revels in his ignorance!
"agrument" - When the voices in LARDASS Lloyd's mentally ill
head collide they have an "argument"
"craetive" - Mongolloyd Davies isn't very "creative" with his
stupidity, however.
"You could have posted it, for we know!" - LARDASS make good
sentence!
"bottem" - Mongolloyd likes those little boys' "bottoms" from
hanging with Steve Holsten
"James Wickstrom talked about tonite that out threre, thier
Sherriff's department" - Mongolloyd shows off those Pulitzer prize
writing skills.
"bring yer cents" - Mongolloyd show how he flunked out of school
because he had no "sense"
"You peeks out" - LARDASS Lloyd and stupidity a symbiotic
relationship.
"Be thier" - LARDASS Lloyd make good sentence!
"If you pussys have balls you confront me!!! Deep down you are
scared of me. You our jellous because I am the great almighty Time
Lord!!!!
The Time Lord always wins in the end." - Does it really need to
be said about Mongolloyd Davies?
"yerself", "hisself" - LARDASS picked up his language skills or
lack thereof from the niggers his mommy Amanda serviced.
"I lost TEN POUNDS on my diet simce first of the year!" - Too
bad LARDASS didn't gain any language skills
"The best Amatuer Radio talk show ever!" - Chosen 5 to 1 over
literacy by other ill-educated morons and Mongolloyd
"All of my Daleks have been dispached!" - Too bad some extra
brain neurons haven't, Mongolloyd.
"satillite" - When LARDASS met the space between his ears
"Tuseday" - LARDASS' usual day to wear his pink tutu
"I am 210 punds now!" - LARDASS lies and fucks up again!
"jelous" - LARDASS Lloyd is "jealous" of those who can spell,
read, and write.
"peoples" - LARDASS Lloyd the "people's" choice of the Biggest L-
O-S-E-R!
"curtians" - LARDASS LLOYD DAVIES uses those "curtains" in his
filthy HUD apartment as a masturbation rag
"depsised" - Mongolloyd Davies, who the entire real ham
community has "despised" for his lack of ability
to pass a simple 5 wpm code test or General theory
"sicker" - When Lloyd Davies has a mouth full of cum he can't
say "sticker"
"liceneses" - Mongolloyd Davies has one of those exclusive
"licenses" on stupidity
"isseus" - LARDASS has "issues" with people of intelligence.
"conquor" - Mentally ill LARDASS Lloyd has yet to "conquer" his

obesity and mental illness
"crakheads" - Retard Davies make good sentence!
"servent" - Roger Wiseman's willing "servant" makes another gaffe.
"lesibens" - When Benjamins take the wild side...the "lesbians" don't care, though!
"Los Angles" - Mongolloyd has the wrong "angle" about "Los Angeles"
"busses" - Do they take the motored "buses" or do they take the
"thier" - You say "their," Lardass says "thier".... to-may-to, to-mah-to.....
"eductional" - LARDASS Lloyd's writing is "educational" on how severe illiteracy is in his family.
"She sounded like she really whappy to here from me." - Mongolloyd get rejected again!
"This is morning I weigh at 207 pounds. This should prove to you, that I can succeed if I put my
mind to it. I know some your stupid critics can't see that, but I'm not here to please you." -
- LARDASS makes the "huh?" factor rise.
"This looks much more like sexy Lloyd" - Porky Pig lookalike stubby tubby Davies dreams he looks like a skinny, tall Billy Zane
"I figured you the thought of me owning..." - Lardass dreams the impossible dream of thought
"I took you a long hour and a several minutes..." - Too bad LARDASS Lloyd didn't take and pass English
"I get a laugh over you!" - Mongolloyd make good sentence!
"did'nt" - "Didn't" Lardass ever pass any school subject?
"Proves to show" - Lavender Lloyd proves he is an imbecile
"It' paid off" - Alcoholic LARDASS Lloyd's bar and utility bills never are though.
"I wear if with" - Davies wears his stupidity well
"You need to get al ife and a job." Mongolloyd retardo Davies needs to get English lessons and not dream of an "Al ife" with "Al Queda"
"I've never fucking pretending attorneys!" - LARDASSclown Davies never had to pretend to be stupid, either!
"...what your life must me like..." - Mongolloyd's life of pizza delivery and trashcan robots is really something to want, too, isn't it?
"manor" - Lardassclown Davies' "manners" are like those of a hog....
"Christien" - Poor LARDASS Davies, he's shows why ignorance is bliss in the eyes of the Lord.
"reely" - Mongolloyd Davies is "really" stupid, isn't he?
"please don't imposter me more" - Mongolloyd make good sentence!
"distastful" - A description of LARDASSCLOWN DAVIES' eating habits.
"commnet" - Most people make "comments," ill-educated Lloyd Davies makes "commnets".

"None of you refuse to tell me who you are." - Huh, Mongolloyd?
"Millinium" - Even after a "millennium" LARDASS couldn't be
smart!
"afriad" - LARDASSclown Davies isn't too smart, I'm "afraid"
"powerfull" - Mongolloyd Davies sure has a "powerful" command of
the English language, huh? The only thing "powerful" of Lloyd is his
body odor.
"conquor" - Lardass Lloyd has yet to "conquer" his idiocy.
"I always new that your stupidity would trip you up, Mr.
Wiseman." - I just "knew" Llardass Lloyd couldn't pose as
"Christy Davies" without fucking it up and outing himself.
"I have given it some though and decided to come back" -
Mongolloyd has never given anything any "thought." (from another
"I'm leaving" speech/lie)
"usaul" - As "usual" Lardass lloyd Davies fucks up!
"Secwet Woger " Llardass Llavender Llad Lloyd's been sucking so
many cocks he's got a lisp! And from Dave Heil!
"douters" - Even though he has his "doubters", it's
"doubtful"
Llardass Lloyd has an I.Q. over 70.
"bypolar" - Mongolloyd Davies is a "bipolar bisexual".
"desperite" - Lardass Lloyd is so "desperate" to win at
something, anything.
"situtation" - Most people get in "situations, " but not our
total fuck-up Lloyd.
"aholt" - Lardass Lloyd usually gets "a hold" of himself on a
Saturday night, since he has no date!
"mysteriuos" - Mongolloyd Davies, "mysterious" survivor of a
coat hanger abortion attempt.
"I've did" - Most people say " I did"
"Woger" - When cocksucking, lisping fags try to say " Roger."
"for sometime" - Lardass has been a mentally ill retard "for
some time" now.
"mommie's" - When Mongolloyds say "Mommy's" as in "Mommy's
house."
"drop out" - Lloyd was a High school and college " dropout."
"backpedalling" - "Backpedaling" is what Lardass does a lot of.
"Maybe two years back" - Mongolloyd speak.
"outted" - Lardass Lloyd's illteracy at work.
"I've riddled Woger for years as Arf! Arf!" - (Mongolloyd is
Arf!Arf!)
"self esteme" - One thng is for sure, Lardass has it..."low self
esteem," that is.
"short comings" - Lardass has many, many "shortcomings."
"yahoo" - Lardass always goes into the "Yahoo!" gay chat rooms.
"The truth hurts you see" - So does reading your mangling of the
English language, Lardass.
"His stupidity can not be disguised for long." - Lardass'
stupidity "cannot" be disquised at all.
"entireity" - Lardass is the embodiment of stupidity in its'

"entirety."
"bothe" - Lardass is "both" stupid and retarded.
"got hime" - Lardass has got "him" a case of the dumbass!
"evelope" - Mongolloyd pushes the stupidity "envelope" to the max.
"chiicken" - Lardass Lloyd should eat more "chicken" instead of leftover pizzas then he wouldn't be obese.
"dont" - "Don't" ever improve your English skills, Lardass!
"likign" - Huh? More Mongolloyd Ebonics.
"you ignorant spawn of satin" - Lardass ironically confesses his love of wearing lace!
"powerfull" - Mongolloyd's brain cell isn't "powerful" enough to light a christmas light.
"heresay" - Mongolloyd is a fucking idot, and that's no "hearsay."
"glas" - Lardass Lloyd never uses a "glass" to drink his sticky protein.
"freind" - Dicksucking Davies hasn't got a "friend" in the world.
"yu" - Lardass, "you" really should've gotten a better education!
"Got Brother Stair tuned in here to listen to while sleeping tonite!" - Mongolloyd fucks up again!
"I am not a retrard" - Oh, yes, you are, Lardass!
"Got you in another lie!" - We've "caught you" in another fuckup, Dumbass Davies!
"I am not mentally challenged! I have some pontential." - Mongolloyd is in denial about his imbecility and has the "potential" to become an even bigger jackass!
"did'nt" - Mongolloyd "didn't" ever pass Spelling.
"soon all your asses are belong to sherrif" - Mongolloyd fantazises about having sex with his local "sheriff"...
"shure" - We are "sure" you are a fucking moron, Llardass Lloyd!!
"proxie servers" "conecting" - Mongolloyd used "proxy servers" when he "connected" to spam Josh's board.
"enfrocement" - Mongolloyd also fucked up when he spoofed caller ID's and spammed boards, and now law "enforcement" is watching him.
"apoligize" - Mongolloyd's parents should "apologize" for ever siring such a mentally ill retard.
"meagre" - Mongolloyd's "meager" brain can't comprehend English.
"goten" - If only Mongolloyd would've "gotten" an education!
"Prepositioned" - Mongolloyd always gets "propositioned" by nouns and pronouns!
"temting" - Mongolloyd is as "tempting" as a root canal.
"accept" - Mongolloyd use the wrong word in the wrong place again!
"normaly" - "Normally" Lardass would be passed out from two Bud Lites by now
"red head" - Little Red is shoving his big ole black dickhead in Lardass' fat piehole.
"Aflack" - Mongolloyd fucks up yet again..www.aflac.com

Mongolloyd Davies make good spells!...

BWHAHAHAHAHAHA No amount of DSP or EQ could change KKKevin's little
girly voice!
We know his testicles have shrunk to the size of b-b's and is a
henpecked little worm.

That's bullshit. Many, if not most, broadcast stations use no
equalizers. They cause more problems than they solve. Microphone
choice, technique; studio treatment and dynamics processing are used
to tailor the voice sound.

How long was Bush on the job? Was he sleeping the whole time? Did he
read newspapers? Wasn't Bush in office 9 months before 9 11. What was he
doing at that time. Being incompetent like the last 5 years.

Show me how much better it is. Just like when people are on unemployment
eventually some of those people drop off. When they dont find jobs.
Could you tell those people about that. Not to mention the average
family income has declined from 2001 to 2004 for the first time since
the Depression. Or is your head still in the sand.

Your statement is factually incorrect regarding equalization, though
the factors you mentioned certainly do affect sound quality and I do
not disparage them.

All AM stations use _at least_ the required NRSC equalization, and virtually all broadcast stations, AM, FM, or TV, use multiband audio processing, which is in itself a kind of adaptive, dynamic equalization.

I just applied those techniques, suitably refined for a narrower bandwidth, to my amateur radio station, after modifying my gear to remove the somewhat ham-handed attempts of the manufacturers to shape the audio.

With all good wishes,

Oh, you are so right, asshole ! I have only been in the IC for 20+
years,
so think what you may ! So what is your profession ? Collecting and
over-paying for soon-to-be-useless SW radios ? You have to be a
nerd-ball
geek, with his own "ham shack". Are you skinny witha crew-cut, or fat,
with
a huge beer-belly from hunkering down in your "ham shack", chasing that
elusive DX signal. Obviously, you and the other nerds lack the social
skills, to effectively deal with antagonistic people, or even people in
general !

There's an NRSC ''Mask'' which is used to keep the sidebands within
limits but no requirement to use any preemphasis, unlike the FM
standards.

Damn! Not only are you a drug addled 'tard, but you're a Constitutional scholar
as well.

Your resume must be quite impressive.

Do you list the places and times you've been institutionalized on it?

indeed that is what the contitution says/

now where does it say the govt has to stay out of our busnessor that it
can't condcut sruveylance

you lcaim this right is being violated

how?

the NSA program doesn't intrude on peoples homes? the warnentless
searches are aproved as reasonble by act of Congress

indeed what persons or things are being seized?

wether or ot the tactics are reasonable or not has not been legaly
deteremined it can only be so determined by a court. what court has
ruled on twhat ever you are babling about

I have some moral qulams about the NSA program but no constitutional
ones

I've found that antagonistic people will ramble on and endlessly repeat
information, but they usually are listening to themselves.
Consequently it can be entertaining to poke and needle those with such
a personality shortcoming and watch the results.

Markie the high school dropout never got around to taking American
History or Civics.

It's in the 4th Amendment, stupid.

> and no papers are being intruded on by say the NSA evedroping

They are watching you, fool.

Then why do you give me so much attention ? This is obviously upsetting you ! Actually, it is most entertaining watching all of you react to every one of my posts. Have you found any elusive DX signals ? Life, as a "DX hound", must get pretty lonely - I'm sure that is all you talk about and nobody gives a shit. So how many usless, over-hyped, over-priced SW receivers have you purchased ?

If you so thoroughly dislike the hobby of shortwave radio listening, the people involved and the equipment then why are you here. You seem to be exerting an unusual amount of energy posting nasty messages and just generally trying to be negative.

Why not redirect that energy and get interested in a hobby that you enjoy. Find some like minded people, kick back and trade some helpful and interesting posts.

5463. Re: Almost an Eton E10 Gloat !

Newsgroup: rec.radio.shortwave
Date: 2006-05-17 16:13:29 UTC
From: gosmithwhisper@yahoo.com
Message-ID: <1147882409.130975.23310@i39g2000cwa.googlegroups.com>
Source record: 74571

So, what is it that SW geeks always need to have a backup radio, "new-in-the-box" ? With my RS radio, I have two backups, "new-in-the-box", which of one, I will never touch, or open. The one I am using, I keep in pristine condition, even wiping it down with a soft cotton cloth, after each time I use it. If I ever get a blemish on it, or drop it, I will throw it away, open up one of the backups, then purchase another backup, so I always have two, "new-in-the-box". I only use it over a carpeted floor, so what happens if I drop it - the instructions say, do not drop - will this cause internal damage, so should I open up one of the back radios, even though, there are no blemishes on it from being dropped on the carpet ? I will rotate the oldest radio out, then keep the most recently purched radio, as the newest, "new-in-the-box". Can you explain this strange obsession ? I was going to keep the Eton E10, but couldn't find a backup, "new-in-the-box", but then, I had the dilemma, of what would I do the the other RS radios that are, "new-in-the-box". I even went to Ebay, and found some E10s, supposedly, "new-in-the-box", but what would I do, if the box had been opened and someone had touched them. This is a real dilemma ! I can't resist having new E10s priced at $39 on Ebay - what should I do ? I saw one post here, that someone had a DX-440 (my favorite radio), "new-in-the-box", and he was using an old DX-440. This creates quite a dilemma for him - what would he do, if the DX-440, that he was using broke, or was dropped causing a blemish - would he have to open up the backup DX-440, knowing that there are no more DX-440s, "new-in-the-box", or just keep the DX-440, "new-in-the-box", so he would just end up staring at the box, debating, if he should open it up. My RS radio is now discontinued, so what am I going to do, if I get down to one, "new-in-the-box" ? Do I go looking for a different style of radio, or should I risk getting two Eton E10s, knowing that someone may have opened up the boxes and touched them ? The E10 is obviously a better radio than my current RS radio, so I am at a real crossroads, in my life, not knowing what to do. Then there is the dilemma, that keeping one, "new-in-the-box", the radio eventually becomes old and deteriorates somewhat. Do we have two, "new-in-the-box", in case we need a backup, then we know there is alway one, "new-in-the-box", so we can have that security of always having one, "new-in-the-box", but then that radio eventually becomes old, but still, nobody has ever touched it. So in this case, even though it is old, "new-in-the-box", is it still considered, "new-in-the-box" ? Is a new, "new-in-the-box", considered newer than an old, "new-in-the-box" ?

Time for another Chuck Mamzer ("Chuck Harder") rant!

Heard Chuck Mamzer talk to Robert Thomas Raming on Monday (or was it Tuesday?), and once again, I heard the same old lamebrain, numbskull conspiracy theories about (among other things) massive concentration camps for "patriots" who disagree with whichever Administration is in power. And let's not forget the inevitable declaration of martial law and the subjugation of the U.S. into the so-called "New World Order," a socialist one-world government.
OK, time to get scatological here: Anyone who believes this BULLS*** is a STUPID JERK (and that goes for you too, cuhulin).
Face it: Over and over and over again, perhaps hundreds of thousands of times in the past 100 years, these conspiracy theories have been debunked both formally in court and in the court of public opinion.
Folks like cuhulin - if they're capable - would do well to answer the following question: If there is a global conspiracy by the Trilateral Commission, the Bilderbergers, the Council on Foreign Relations, Jewish bankers - whatever - to destroy the U. S. of A., how come no one has been able to successfully expose this nefarious plot?
The Esteemed Doctor Raming tried to answer this question by pointing out J. Edgar Hoover's admonition about "a conspiracy so immense";
Doctor Raming forgot to mention that JEH was a flaming f****t and a cross-dresser!
Another question for cuhulin to ponder: Why does Hollywood make a such a big deal about conspiracy theories?
Why did DreamWorks just release "The DaVinci Code"?
Answer: Any conservative worth their salt realizes that Tinseltown deals in make-believe. It sells escape - for $9 (plus a $4 bag of popcorn and a $3 Coke). Say what you will about Hollywood moguls; they're damn smart. They know what sells. And what sells is escape into fantasyland from the daily grind. Which includes conspiracy theories.
Therefore, using the Hollywood empirical mode, it's safe to say that conspiracy theories - which comprise the majority of Chuck Mamzer's

rhetoric on the air - do not exist!
Quid es demonstrato!

5473. DW-Radio Special QSL Card

Newsgroup: rec.radio.shortwave

I still have the dilemma, whether I should wipe my radio with a soft cotton cloth, possibly, eventually wearing off the finish and paint off the buttons, or can I stand using a radio that has my fingerprints on it ? Also, if I get a blemish on it, or drop it on the carpeted floor, can I stand using a defective radio, or should I break out one of my backup radios ? If I use a backup radio, then I have only one, "new-in-the-box", knowing that the radio has been discontinued. But if I continue using the defective radio, I can always look at the two, "new-in-the-box", with the security that I have two backups. I don't know which is worse, using a defective radio, or only having only one, "new-in-the-box". But if I have only one, then I could consider getting two, or three, new E10s off Ebay, and throw my remaining, "new-in-the-box", RS radio away. But if I get the E10s, and a better radio comes along on a really good sale, would I face the same dilemma again, as my RS radio ? But then again, what happens if someone has opened up the E10 boxes and touched the radios ? Would they still be considered, "new-in-the-box" ?

I didnt think you were smart enough to look it up. The decline was due to
the Clinton recession and no it wasnt the first time since the depression,
try 1989-92.

There's also the case of the new electonics smell, that we all cherish, when we open up a radio, for the first time.
That may be the deciding factor, whether a radio is new, "new-in-the-box", or old, "new-in-the-box", In the case of the lucky gentleman that has a DX-440, "new-in-the-box", if the box is not sealed in plastic, and has lost its new electronics smell, we could still say it's, "new-in-the-box". My RS radios' boxes were not sealed in plastic, but appeared untouched by human hands, so I can say cautiously that they are, "new-in-the-box". The RS sleazy salesman said that he had an Eton E10 sealed in a plastic box, which I would have kept as backup, but I was unable to find another one sealed in a plastic box, so it may have been touched by someone else, and thus would have not been, "new-in-the-box". If I had a new radio unsealed in a plastic box, then I would hesitate in opening the box to look at the radio, because it would lose some of its smell and be less, "new-in-the-box" How does one deal with such dilemmas ?

You all still didn't give me any solutions to these dilemmas.

5488. DX mapping program

I came across this very useful radio DX map tool on the Yahoo groups MWDX.
Courtesy of Jurgen Bartels.

It will show you a map with the path, bearing and distance to any point on
earth from your shack at home.
Really useful for planning your antenna directions or if you just want to
know the direction a signal is coming in from.

If you like listening to the hams and are puzzled by the callsigns, it gives
the callsign prefix's and location.
Also shows the greyline.

Download it at
http://tonnesoftware.com/pizza.html

Well worth a try

Well, I would like to at least get it working so I COULD play with it. Actually, I really wanted it to use for BCB AM, which it will do just fine for. Thought about salvaging a rotating ferrite bar from an old radio and putting on this one to enhance the BCB AM. Something to play with.

I've never molded anything. i would rather find something and try to make it work. The rubber wheel is an idea i haven't thought of. If I could just find something close, I think I could make it work.

I dont do kilometers.
Paris,France to Brussels,Belgium (according to indo.com) is 165 miles.
According to my Rand McNally Road Atlas,Paris,Texas (the only real Paris
on Earth) is more or less in a straight line the best way I measured it
out with my ball point pen and a card that was in my PC World magazine
is,Paris,Texas to Jackson is about 290 miles.Every place I pick up with
my radios that is ''long distance'' is further away from Jackson that
Paris,France is from Brussels,Belgium.It is about 180 miles (driving
miles) from me to New Orleans.

Clinton had no recession. Greenspan (a right-wing moonbat) caused
one. Seems to me there was Bush in charge back in '89, too.

Real wages have been dropping since Reagan declared war on the Middle
Class.

What happends, if our, "new-in-the-box", unsealed box is handled too much, then someone might think it is not, "new-in-the-box" ? We could put the unsealed, "new-in-the-box", box in a large zippered plastic baggie, but it would need to be clear plastic and put in a place, in our "ham shack", so we could look at it in times of uncertainty, when our current radio gets dropped, or gets a blemish on it. Of course, we couldn't put it on a shelf, because it might get bumped and fall off, thus it might be damaged, "new-in-the-box". This would create a real dilemma, because we would not know, if it was damaged, or not, and if we should break out the new, but possibly damaged, "new-in-the-box", radio, or purchase yet another backup radio. If we broke out the backup radio, then we might be using a damaged radio, yet our old radio would still be pristine. We would then have to make the decision, whether to purchase yet another backup radio, if they still made it, but then we would be using two used radios, with two new, "new-in-the-box". This could get to be very expensive. This is where my $25 RS digital PLL receiver has its advantages - it performes, just as well as, my returned, but broken S350 to RS, and it is no big deal to throw out a $25 radio, unless you are on welfare. I have thrown out two of them, because of blemishes, but now the radio has been discontinued, so I can't afford to get any blemishes on my current radio - but I still have two new, "new-in-the-box", that I stare at time-to-time, for reassurance. So, we have to find a place in our "ham shack", that is safe for our new, "new-in-the-box" radios, but a place where we can stare at them. Of course, if we are lucky enough to find a radio, where the box is sealed in plastic, we know for sure that no one has touched it, and we can surely call it new, "new-in-the-box". So that would solve this dilemma, but we would probably want to keep the sealed box in a zippered plastic baggie, just to keep the plastic on the box pristine.

ok, get off the "more sensitive" thing already everybody. I never said I thought it would be more sensitive, I simply noted that it is not. The sensitivity is NOT the issue! The issue is the bandspread tuning, it sucks! Especially in comparison to my other receivers, and, since I *do* have other receivers that do not have bandspread tuning, I see no need to fart with one that does. "Nuff said on that. NOW, is anyone interested in buying a DX-160?

5521. bandspread tuning tutorial?

Newsgroup: rec.radio.shortwave
Date: 2006-05-18 02:41:23 UTC
From: Lisa Simpson <none@none.com>
Message-ID: <n9Rag.40091$P2.5908@tornado.ohiordc.rr.com>
Source record: 74679

Just for the hell of it, and to give this DX-160 one more chance, can anyone point me at a bandspread tuning tutorial? Is bandspread tuning similar in concept to a vernier by any chance? And, why is it necessary on the DX-160 to use the main tuning to the specific "white crosses" on the dial to use the bandspread tuning dial?

You can look at, download, form 610 from the FCC website. That's the
application for a station and operating license, and you can see what
info is required.

You can go to www.QRZ.com and look hams up by their name, call sign or
whatever.

That's nice. What are the design details? If I was to guess it looks
like a common mode antenna where only the center conductor is
electrically connected to the radio. At the coax far end from the radio
the center and shield are connected together. This would not be a good
antenna in an electrically noisy environment.

Find a station at either end of the band of interest. Set the
bandspreda to 0 or 100 as required. Fine tune with the Main tuning.
Make this station your bandspread anchor. Using a frequency guide
write down known stations and their bandspread indications without
moving the main tuning. Do a chart for every band. Your $50 radio
will then be perfectly calibrated for SWL.

For example 12095 would be your anchor at the top of the 12 MHz band.
As you tune down on the bandspread you'll across some powerhouses.
Note their actual frequency and their bandspread indication on your
chart. Soon you'll be able to guestimate the gaps.

Mike Moron thinks that it is perfectly fine to rob Peter to pay Paul. I was checking the gas receipts from the year 2000 and at that time I was paying 1.50 per gallon for gas. Now its in excess of 3 dollars a gallon. Isn't that what the Bushites love that way they can make record profits. Its funny because the official insignia of the Republican party should be an elephant with a dollar sign on his hide.

I want to know where this Clinton recession was at. Maybe after Bush I
screwing things up royally in 1990 to 1992 when he got booted. After
that the economy picked back up and that's well known too. Then after
Clinton's departure it started hitting the skids in 2001. That was when
Bush was asleep at the wheel. Not to mention when Communist China was
holding our plane that was overtaken on Hainan. Interestingly, how Bush
kowtowed to them on that one too. I seen how things have went for the

past 5 years and with a deficit of 2.7 trillion over the past five years, it doesn't say much for his so called fiscal conservatism, now does it.

At least Kanye saw things for what they were. Why did it take Michael Brown several days to figure out what the hell to do. Meanwhile, people were being shot dead and thousands were bottled up in one hell of a situation. Of course, those compassionate conservatives came to the rescue. Wasn't that their campaign slogan. Compassionate conservatism, bwhahahah. What a laugh.

Millions of outsourced jobs. Record trade deficits and tons of cheap ass Chinese merchandise flooding the country. Family sustaining jobs in manufacturing, technical, administrative professions being flushed out to Bangalore, Mumbai, Shanghai, and points between. Why don't you tell that to the people who lost well paying jobs from no fault of their own. While the Wall Street cabal made it rich off the backs of working Americans.

2.7 trillion dollar deficit from 2001 to 2006. That's financial stability? I guess in that case, hell with it, run up those credit cards and spend all you want. Just buy plenty of those Communist Chinese goods that way you can help them build their military industrial complex at the expense of our economy. Watch when the Chinese cars come over in 07 and see how much SHTF. Airline bailouts, Enron, Ken Lay, Operation Iraqi Liberation, OIL. Yeah, Mikey its all great.

The bandspread dial is only accurate when the main tuning is set to
those white markers.

I take it this is your first analog receiver that doesn't have a digital
frequency display. You would probably enjoy your DX-160 more if you used
a display with it. It can also be used with other analog receivers, in
case you get the bug for a real 'boatanchor'.

Here's where to get the display.

Yes, the Corporate state must control and crush it's competition which
is the small business and the average person. Rather the corporation is
interested in monopolizing and with little moral guidance or decency.
For example, look at some of the sweatshops in foreign nations ran by
the corporations. Indonesia would be a good place as well as China.

For One and All,

GROVE FLEX-TENNA□ HVU -by- Grove Enterprises
Price as Listed $14.95
Grove Part # ANT45
FLEX-TENNA => http://www.grove-ent.com/grovehvu.html
The 24-foot Model HVU Flex-Tenna□ is a thin and inconspicuous,
Flexible-Wire Antenna designed to provide continuous 10 kHz to
2500 MHz reception on Shortwave Receivers, wide-frequency-
coverage receivers and scanners with only one antenna connector.
Since it's a narrow length of clear-insulated cable, it is an excellent

choice for low-visibility installations.
FLEX-TENNA => http://www.grove-ent.com/grovehvu.html
Only 1/4" wide and clear-vinyl insulated for low visibility,
the Flex-Tenna□ is conveniently rolled up for easy transport
and is an ideal monitoring antenna for camping, motels,
emergency deployment, and fixed installations. Its vinyl-
protected wire elements allow the Flex-Tenna□ to be
casually hung from a tree branch or under the roofline
outdoors, across ceiling molding, upper window casing,
doorway, or attic roof truss indoors. No ground or radials
are required. An F connector is provided for convenient
attachment to low-loss coaxial cable.

'other' Shortwave Antennas offered by Grove Enterprises
http://www.grove-ent.com/shortwaveantennas.html

and now you know - iane ~ RHF

Source record: 74749

JYAM,

IIRC the prblem was in the Radio's Gear Driven
Mechanical Tuning System which used Planetary
Gears - not a Pinion Gear.
See the Second Planetary Gears Drawing
http://auto.howstuffworks.com/gear-ratio4.htm
The Inner {Center} Gear in this Mutli-Gear Reduction
Gear System was pressed on the little Variable
Capacitor's Shaft and the Outer Gear was connected
to the Main Tuning Knob. This gave the Radio a
'feeling' of having well defined tuning without using
a larger Air Variable Tunering Capacitor.

hope this helps for a better understanding
of the nature of the problem ~ RHF

You wouldn't know what a job is anyway. It's doubtful a guy who posts at
9 am in the morning regularly actually has a paying job. Unless he is
working the late shift at the Taco.

No we do not know.

I still do not know the antenna type or how it functions from the
description. Without this knowledge I am unable to evaluate the claims
made for it, which are vague and outlandish at the same time.

That is interesting because during Reagan's term more people became rich
at the expense of the poor. Reagan was a corporatist anyway who
supported free trade which in turn assisted the corporations in
outsourcing millions of jobs.

John,

You asked what this radio looks like; here is a link:

http://www.owdjim.gen.nz/chris/radio/Realistic-12-655/

About the external antenna, the radio has a place for one and I tried
it with about 55'
of wire stretched out in the back yard...nothing changed that I could
hear. I know 55' is real short for MW
but it's all I could find. I'll play with it a little more and see
what works, without opening it up.

I was thinking more of a tunable loop antenna that you can rotate to
reduce the mishmash of signals. It could be either directly or
inductively connected.

Leave it to Lardass to bring up a subject not in the post. Find a new
unskilled labor job yet, fired pizza BOY?

> It's doubtful a guy who posts at
> 9 am in the morning regularly actually has a paying job.

Wrong again, Lardass. Roger's worked the same job for years, it's not
his fault you had to work in unskilled labor all your life. And you
just got fired from your pizza BOY job, didn;'t you, the only job you
are qualifi\ed to do. P.S. It wasn't GMAC, he never worked there to
begin with, you are too stupid to find out where he does work.

Get to looking for a job, LOSER!

Greeetings!

First please excuse me for my bad english.
Can anyone help me with link for page with details about calculating HF broadcasting antennas.... (dimensions, input impedence, radiation pattern, radiation impedance, max power,...)

Link for calculating program will do too.

I nead it for college

Thanx, Ante

Um, isn't the mantra of the left take from the rich give to the poor? Like
Bush controls gas prices. I suppose if it rains tomorrow it's Bushes fault
as well. The bitch, moan and complain platform will get you far.

Lisa Simpson writ:

>I never said I thought it would be more sensitive, I simply noted that it is not. The sensitivity is NOT the issue! The issue is the bandspread tuning, it sucks!
Especially in comparison to my other receivers, and, since I *do* have other
receivers that do not have bandspread tuning, I see no need to fart with one
that does.<

Most of us who own a DX-160 or one of its cousins (even from other manufacturers) do not own it because we believe it to be a spectacular DX machine with important and high-functioning bells and whistles (like a bandspread). In fact, in many cases, it is just the opposite! We want an old bandspread radio to remind ourselves what it was like in the good old days.

We own it because it is sort of an electronic tinkertoy, a cool-looking gadget with numerous knobs to twiddle that do "something" if not exactly what we wish they would do, a gadget that seems to promise a lot, and yet challenges us to help it deliver on that promise. It is also a nostalgic item from the 1970's, not as early or robust as the big ol' tube monsters but still fairly hefty and still with the bright warm glow that, for many, characterize a "real radio."

It is a fun toy. And, on some days when the DX Gods smile on us and our ears are just a bit sharper than usual, we pick up some cool photons from a distant land and decide that, yes, it is worth having this silly, colorful toy in our shacks.

It won't be for everyone, maybe not for Lisa S. It is, however, an indispensible connection to the past for some of us.

Bruce Jensen

So your saying that Bush destroyed the economy in three months? The slowdown
started under Clinton. Bush is not fiscally conservative. He's more like a
liberal spending wise admitted.

This morning I went through the freq display adjustment and evaluation with much more care than the first time, when I originally discovered the trimmer control.

Perhaps initially I didn't leave the radio on long enough for the circuitry to warm up completely, because now I find ZERO imbalance between LSB and USB across HF and medium wave. Probably someone with test equipment could find something wrong, but to my ears the sound is identical between sidebands when the filter bandwidth is the same, the radio is tuned to the carrier, and the PBT is centered.

As far as frequency display accuracy, I now have the display spot-on throughout the HF range, and only 20 Hz error near the bottom of medium wave. That is, zero beat on my local on 570 kHz needs to be set to 570.02 kHz for natural speech in LSB and USB (which still sounds "balanced between LSB and USB at 570.02). For my local on 1000 kHz, I need to tune to 1000.01 kHz for zero beat, and on 1560 kHz the zero beat point is right at 1560.

The radio is quite stable enough for pleasant and useful ECSS tuning of DX after the warm-up, which is quite an accomplishment for a portable receiver!

I now want to investigate how long it actually takes for the drift to settle down, as I left the radio on over night before doing my more careful adjustment and test.

BTW, just to clarify my earlier message, the frequency adjustment hole is found in the copper cover that's beneath the left slot OF THE RIGHT GROUP of ventilation holes on the back. It is *not* under the very far left vent slot.

I guess like several others on this thread I'm now a bit confused.
There should have been no surprise that the radio had bandspread tuning
after all the prior threads and what I assume were adequate pictures
from the seller. Nor should there have been much question about how it
works.

If You
" *do* have other receivers that do not have bandspread tuning, and see
no need to fart with one that does."
then why in the world did you make such a big deal about buying it only
to turn around and complain loudly about it's single most prominent
feature.

> DX-160?

The issue is hardly the bandspread tuning.

Take a receiver like that and leave off the bandspread tuning and you'll find that the tuning is the issue. The bandspread tuning is to compensate for the limitations of the main dial, brought about by the desire to keep costs down and the limitations of the technology of the time.

Any cheap receiver of that vintage had quite a few limitations, but if you didn't have money then you had no choice but to buy one of them. That's why there were so many of those low end receivers. They suffered badly from lack of image rejection, they covered large portions of the spectrum on each band, and the dial mechanisms were cheap. Bandspread tuning was a real cheap way to compensate for the problems of the main dial.

My first receiver was the Hallicrafters S-120A (that's the transistorized version), and the dial pointer was so wide that it couldn't indicate frequency, even if the dial had good calibration (which it didn't). On the higher band, I seem to recall the pointer wasn't much smaller than the width of a ham band or two. If there was no bandspread dial, then there was no real chance at being able to tune things in properly.

Synthesized receivers started becoming cheap enough for most a quarter century ago, or so. So were talking receivers that are at least 25 years old, and more like thirty to forty years old. Technology actually has advanced quite a bit since then. You can buy a synthesized shortwave receiver at Radio Shack for $20 nowadays, and that's because the advances mean the synthesizer can come in a single IC, and then it becomes cheaper to use that than an analog tuning scheme. Of course, it's somewhat illusionary, because synthesized tuning doesn't actually mean the receiver is any good. Those cheap digital receivers are about the same as those low end receivers of thirty years ago, albeit with digital tuning.

Michael

Perhaps "efficient" is the wrong word.

In my experience, it is quite difficult to send distinguishable Morse dots and dashes without a key (YMMV). Doing so by keying a mic or touching wires together thus becomes very slow - slower even than tap code. Also, it takes considerable effort to learn Morse and even more practice to copy all the less than perfect fists out there. Thus the number of operators and potential listeners who can copy such a 'bad fist' are few now and are rapidly vanishing now that Morse is strictly a hobby mode. OTOH, everybody who read my post now knows tap code - which is common in prisons, mines and other places because anybody can copy it with little or no practice.

I'm not suggesting that anybody eschew Morse if they enjoy it - just that they stick tap code into the back of their minds for emergencies.

Ever heard of interlocking corporate directorships, the Queen of England being the richest woman in the world from oil, and how about Halliburton getting those Iraqi reconstruction contracts. Sounds like a conflict of interest to me. So Cheney wanted to be Vice President so that he could make a lot less than in private industry. Don't tell me that the Dickster has such lofty and moral ideas. Because it's obvious he doesn't and not to mention that they tried to cover up the incident at that ranch down in South Texas. Finally they had to release the story because the owner already went to the press.

As far as liberals making the connection between Bush and Cheney, Inc and Big Oil, its all too obvious and look who got the contracts in Iraq for the reconstruction. Just like in Vietnam when Johnson bombed the crap out of the Rubber plantations and then had his construction company go back in to repair any damage. The name on the trucks don't lie

Interestingly, though the mass layoffs did not start until March 2001
and there about. That's when the ball got rolling and the automotive
sector and tech sectors began to purge jobs.

While the lemmings are following their so called conservative leader
after which they will have egg on their face. The problem is boy that
the truth is coming out. Just like his appointee Michael Brown was
whining on Heartland the other day about being smeared. However, what in
the hell does being involved with the International Arabian horse
federation have to do with being appointed as a FEMA director. For
goodness sakes, how the hell can you appoint a guy with no public
emergency coordination experience to the top Federal emergency
management post. Then to blow smoke about "Brownie, you're doing a great
job meanwhile they had supplies and logistics set up in Alexandria, LA
and Baton Rouge but it took them 4 days to get to New Orleans.

The television people were there the same day and then of course the next day. But the FEMA couldn't get people in there even in 2 days. Nagin and Blanco both couldn't have done crap about that situation because LA is a quite poor state with limited resources. Not to mention, how the whole situation down there is still a disaster. Meanwhile Bush is flying around in a plane figuring out a way to screw away the rest of Social Security to the Wall Streeters. Hell, I got my info from a lot of different sources, not just CNN or any of the others.

Irregardless, would you want your calls to be tapped. That's about as paranoid as what Nixon was up to in the Watergate scandal. So anyone can accuse everyone of it, right? Meanwhile if you haven't done anything wrong and I haven't and most Americans havent, then you still have someone spying without your consent. So what happens from a privacy standpoint. What about the possibility of that information being misused against others? Did you conservative bimbos ever think of that? So basically your communications could be upstanding yet they feel a need to know about details of your business or life. Like that contract you have for 2 million bucks to supply an automotive customer with parts. It could be anything. The point is, that if you weren't breaking a law, then you shouldn't be spied on period. Not just on suspicion. That's the big difference here is that they want the ability to spy on everyone. Which is the Echelon system that Clinton put in place and was designed by the NSA during Bush's term. Ever heard of John Poindexter and his Total Information Awareness program? Duh?

Its actually called running the printing presses overtime so that you
can print too much currency which chases too few produced goods and
services. That's the true measure of inflation. Yet in most cases, wages
and incomes remain stagnant while gas goes to three dollars a gallon and
corporations are sitting on massive cash reserves.

Thats total Bullshit. Because Reagan started the whole ball of wax.
Spend some time doing some decent research and you'll finally figure it
out. The whole NAFTA/GATT agreements were manufactured when Reagan and
Bush were in office and signed by Clinton. The Republicans always want a
way to make an easy buck on the backs of working Americans. This time it
was sweatshops and foreign labor at 1.50 an hour and less. So now,
instead of that, they want millions of illegals pouring into the
country. But why hasn't your leader done anything about it, because big
business pulls his strings.

Ok, since your an advocate for the rich, then you need to start paying 5
dollars a gallon for gas that way you can help those rich guys out.

I guess it's ok for a Republican and so called compassionate
conservative to sit there and watch while everything goes to hell for
the benefit of a few. But then again, like a hypocrite, it's ok for a
guy like that to sit in his church pew on Sunday and then lie and screw
his fellow man the rest of the week. Right?

BWHAHAHAHAHA Poor Lardass, clueless as always.

What's the difference between gas prices and Llard Davies' mommy?
Gas prices go up on the public while Llard Davies' mom always goes DOWN
on the public!

You posess a dalek doll up your fat ass, Lardass. You don't have a job now that you were fired from Papa John's (you couldn't even hold on to a loser pizza BOY job), you get drunk all the time, and you certainly don't have a girlfriend, save those dalek dolls. You certainly don't have any education either, Davies, and your middle name is Austin. What a pansy-ass name. You have to live in a HUD apartment with the rent way past due and you can't evn pay your own bills with yout mommy's help.

Poor Lardass, still whining like the cunt you always will be. You
should be out looking for a job, loser, instead of sitting on your fat
ass whining on the internet, fired pizza BOY. Some people called the
Athens, Papa John's and found out you were indeed fired, Davies.

Most people can see it is a spacing error, Lardass. But you have your
malformed head up your ass.

> Where did you get your second rate education?
Oh, the irony since you posted:

Billy "Dumbass who can't put together a sentence" Smith shows off those
English skills, quite ironically in
<VfQHf.14581$rH5.8121@newsread2.news.atl.earthlink.net>:
"That's interesting there idiot. I bet you really did flunk high school
math and probably elementary too. Oh thats right, wasn't that when was
in
Floriduh. Spelled Florida but the DUH is for your Dumb Ass."

"wasn't that when was in Floriduh" - Billy makes good fuck up!

Billy "shoots" himself in his palsied club foot once again in
Message-ID <Q0bJf.19641$vU2.7735@newsread3.news.atl.earthlink.net>:
"Roger, shots himself in the foot"

Billy the illiterate retard Smith screws up again, and his illiteracy
is exposed. "It serves him right."
in<hauKf.1410$S25.940@newsread1.news.atl.earthlink.net>:
"Deserves him right."

Billy "retard" Smith confesses to his generally accepted retarded
status in <LwpLf.2321$F56.2317@newsread3.news.atl.earthlink.net>:
"I'm a general retard. bwhahaha"

Billy "spelling champ of the general retards" Smith admits his bad
hygiene but is still in denial about his English skills in
<QxpLf.2322$F56.1169@newsread3.news.atl.earthlink.net>
"Sure I can spell and smell."

"Billy" the NOtwordSmith fucks up again with this incompete sentence in
<qgyNf.5576$S25.341@newsread1.news.atl.earthlink.net>:
"So when you got divorced boy, did your finally figure out that your
more"

Billy "cumgargler" Smith managed to awaken from his drunken stupor to
slobber
in <fbIOf.442$sL2.25@newsread2.news.atl.earthlink.net>:
"Isn't that you mom weighed"

Mr."Education" Billy Smith steps on his own dick again when he talks
about others' "educations" (or educatiion" as he spells it) in
<w7IOf.436$sL2.167@newsread2.news.atl.earthlink.net>:
"Uh, huh. Right LOSER. Still smoking that dope again? By the way how is
your
so called educatiion actually doing for you? Those online classes."

Billy Smith shows off his Pulitzer Prize writing skills in
<B9IOf.439$sL2.255@newsread2.news.atl.earthlink.net>:
"You're whole life has been exhaled before."

Billy "illiterate retard" Smith spikes the "HUH?" factor in this
slobbering in
<MGqUf.16833$S25.8455@newsread1.news.atl.earthlink.net>:
"Come on, do it just have you some spiked Kool Aid."

"Didn't" your special-Ed teacher teach you how to spell, Billy?
in <OCqUf.16826$S25.10695@newsread1.news.atl.earthlink.net>:
"...didnt Marie teach you to play nice"

"Rhodes scholar" Billy Lardass Davies Smith blunders and blows his
cover again in <Et%0g.6340$sq5.1769@newsread2.news.atl.earthlink.net>:
"Rhode's scholar Scheissman blows his cover again."

Billy "dumbass" Smith steps on his own tiny dick when he tries to
criticize others' typos,but he doesn't "perform" well as usual with his
blatant "stupidity" in
<oCk1g.5958$Es3.3907@newsread3.news.atl.earthlink.net>:
"Noteed!!!!!!!!!!!!! Bwhahahahahahah. You're a brilliant one
Scheissman.

You even peform stupid acts on your blatant stupidty"

Billy "dropout Lardass" Smith steps on his own dick when he tries to comment on others' spelling abilities, but he "can't" do any better, misspelling "Roger" in Message-ID: <mQr3g.8970$sq5.4914@newsread2.news.atl.earthlink.net>: "Woger cant spell very well anyway."

Poor Lardass, plagiarizing from Les Locklear now.

> Do it, we won't miss you.

Nobody would miss you, Lardass, that's why you have to beg for
listeners to your bumbling shitty web "show."
Everybody hates you, Lardass, everybody!

Good point. It is true that the original Morse code was merely clicks
and spaces on wired telegraph systems, similar to the tap method you
suggest. I see the advantage that by tapping slowly, anyone who knows
the scheme can copy. This is also true of Morse, of course.

It's not a big deal to connect a digital frequency display to the
DX-160. It just requires a short length of coax to the main tuning
oscillator circuit. If you have the schematic I can suggest the
connection location. Do you know how to solder? You could hardwire the
display to the receiver but it would be better to install a jack (RCA
female phone jack) on the back, so you could unplug the display. This
would allow you to use it with another receiver.

I do not know how to solder, and my hands do not sit still well enough to perform such exacting work; I wind up burning a circular sport 3 inches wide around the target! I would really like to have a digital freq. display on this unit too, but AADE does not do the actual modifications. Oh well, back to my original idea: anyone interested in a DX-160?

Yes, and a satellite also requires a directional antenna and special
receiver (and a subscription). Putting LW into standard radios would cost
almost nothing, and add little to the cost of a portable radio.

> http://www.ccrane.com/antennas/shortwave-antennas/kaito-an-03l-shortwave-antenna.aspx

You could be right about it being just a single insulated wire but use
of the word cable usually means transferring a signal from one place to
another. Complete electrical paths require two wires at a minimum
because as any engineer knows for a circuit to be a complete path a loop
forms with one wire carrying current to the load and the other wire
carrying it back to the source according to basic circuit analysis.

The description states "No ground or radials are required." indicating
that the antenna is somehow balanced and not single element common mode.

Also a plural is used in this descriptive sentence "Its vinyl-protected
wire elements allow the Flex-Tenna" indicating more than one conductor
is used but maybe I read to much into the description.

How much energy did it take to put the satellite into orbit?
How much power is used in the uplink effort?

ROTFLMAO!
If it came off the Titanic, it looks pretty good. I would NEVER buy
ANYTHING from those guys "I sold it" They have many different distribution
points. The thing that turns me off about them is they ALWAYS weasel out
of any responsibility for anything by stating that they are not the owners
and can't guarantee anything the owners tell them. (NOT A QUOTE) (I am
paraphrasing them) What a joke.....

That's like saying how much energy was required to build a power
plant.

Most TWTAs run a few hundred Watts.

I would say it was in nice condition for spending years outdoors not far
from the ocean.
